Multidisciplinary Minors

Foods Technology

Course code		SFT3351				
Course title		Food Chemistry				
Scheme and Credits		2 L: 0T : 0P 2 credits	2	0	0	2
Pre-requisites		Basics of organic and inorganic Chemistry, Physical chemistry, Analytical chemistry				
Objectives of the course	1	To understand basic physico-chemical properties and chemical structures of food components				
	2	To understand the importance and mechanisms of the reactions of food components taking place during food processing				
	3	To understand the significance and mechanisms of the reactions of food components taking place storage and spoilage				
	4	To think critically on the role of water and its various forms in food preservation				
	5	To understand the role of food constituents responsible for nutritional, and aesthetic quality of foods (such as texture, flavor, and color)				
	6	To apply course concepts in solving problems related to food constituents				
Syllabus	1	Introduction to the constituents of foods: Water in food systems: Chemistry, properties and food significance	3	0	0	3
	2	Carbohydrates: Classification, Analysis, Physicochemical and functional properties of carbohydrates	7	0	0	7
	3	Proteins: Classification, Analysis, Physicochemical and functional properties	6	0	0	6
	4	Lipids: Classification, Analysis, Physicochemical and functional properties	6	0	0	6
	5	Vitamins: Classification, Analysis, Physicochemical and functional properties	4	0	0	4
	6	Minerals: Classification, Analysis, Physicochemical and functional properties	4	0	0	4
			30	0	0	30
Suggested Reference Books	1	Food Chemistry – Belitz H.D, Grosch W, and Schieberle. P.3 rd Edn. Springer Berlin / Heidelberg				
	2	Food Chemistry- Fennema O.R 2 nd Edn., Marcel Dekker, New york. (1985)				
	3	Food Chemistry- Aurand L.W and Woods A.E, Avi Publishing Company, Inc, Westport, CT (1973).				
	4	Principles of food chemistry - John DeMan, Springer, (2018)				
	5	Food Chemistry. Meyer. Cbs Publisher. (2004)				
Outcomes						
	CO1	Describe the various constituents present in foods and their roles therein				

CO2	Describe the mechanisms and significance of physicochemical reactions involved in food processing and subsequent storage		
СО3	Describe the mechanisms and significance of physicochemical reactions involved in spoilage of foods		
CO4	Explain the significance of water in food quality, preservation and storage		
C05	Describe and demonstrate the role of food constituents on nutritional/anti-nutritional and aesthetic quality of raw and processed foods		
CO6	Extrapolate the knowledge gained on food composition to practical problems in food quality		

Course code		SFT3352				
Course title		Food Processing Technology - I				
Scheme and Credits		2L: 0T: 0P 2 credits	2	0	0	2
Pre-requisites		Food Chemistry				
Objectives of the course	1	To understand principles of food processing and preservation				
	2	To acquaint post-harvest technology of fruits and vegetables				
	3	To analyse various processing methods involved in plantation crops				
	4	To understand post-slaughter processing of meat and poultry products				
	5	To learn different commercial processing techniques for value addition				
Syllabus	1	Principles of food processing and preservation; unit operations in food processing (mechanical separation processes, food conversion operations, material handling etc.)	6	0	0	6
	2	Technology of fruits and vegetables processing: Current scenario of production of fruits and vegetables; post-harvest technology; commercial canning of fruits and vegetables; processing and preservation of fruit beverages; commercial processing technology for value addition.	10	0	0	10
	3	Technology of plantation crops, herbs and spices processing: Processing of minor and major spices; extraction of spice oil and oleoresins; post-harvest processing of plantation crops.	6	0	0	6
	4	Technology of meat, fish, poultry and egg processing: Meat processing operations; egg processing and preservation; processing of fish and marine products.	8	0	0	8
			30	0	0	30
Suggested books/reference	1	Post-Harvest Technology of Fruits and Vegetables: Handling, Processing, Fermentation and Waste Management by Verma LR and Joshi VK				
	2	Introduction to Spices, Planation Crops, Medicinal and Aromatic Plants by N. Kumar and Abdul Khader				
	3	Meat, Egg and Poultry Science and Technology by Vikas Nanda				
	4	Food Processing Technology by P. J. Fellows, CRC Publishers				
Outcomes		On completion of the course, the students will be able to				
	CO1	Understand the basic knowledge of food processing and value addition				
	CO2	Asses various aspects of post-harvesting operations				
	CO3	Asses various aspects of post-slaughtering operations				
	CO4	Gather knowledge of spice processing equipment's				
	CO5	Understand importance of by-product processing and waste utilization				

Course code		SFT3353				
Course title		Food Processing Technology - II				
Scheme and Credits		2L: 0T: 0P 2 credits	2	0	0	2
Pre-requisites		Food Processing Technology - I				
Objectives of the course	1	To understand the basics of various unit operations in food processing				
	2	To understand the processing and milling of cereals				
	3	To differentiate various dairy products and the equipment's used for its processing				
	4	To differentiate various bakery and confectionary products and the equipment's used for its processing				
	5	To learn different commercial processing techniques for value addition				
Syllabus	1	Recent advances in product and process development; important aspects of process and equipment design for food processing; CGMP/HACCP. Technology of cereal, legume and oilseed processing:	4	0	0	4
	2	Types of cereal, legumes and pulses; Grain storage principles; wheat milling; paddy processing; legume and oilseed processing with newer techniques.	8	0	0	8
	3	Technology of milk and dairy processing: Dairy developments in India; sampling and quality testing of milk; processing technology of dairy products.	8	0	0	8
	4	Technology of bakery and confectionary: Quality and functionality of raw materials used in bakery; Dough chemistry; Various methods of bread production; Biscuits and cookie manufacturing technology; Chocolate processing; Sugar candy manufacturing.	10	0	0	10
			30	0	0	30
Suggested books/reference	1	Fundamentals of Food Process Engineering, Toledo RT, 2000, Chapman and Hall.				
	2	Chemistry and Technology of Cereals as Food and Feed by Matz				
	3	Postharvest Technology of Cereals, Pulses and Oilseeds by M Chakraverthy				
	4	Outlines of Dairy Technology by Sukumar Dey				
	5	Bakery Technology by Jenkis, S.M, Lester and orpen (1975)				
	6	Confectionary products manufacturing processes by Gutterson, M, Noyes developments corporation(1969)				
Outcomes		On completion of the course, the students will be able to				
	CO1	Understand the basic knowledge of food processing and value addition				
	CO2	Develop an overall understanding of cereal processing aspect				
	CO3	Asses various aspects of oilseed processing operations				
	CO4	Gather knowledge of dairy processing equipment's				

C05	Understand importance of by-product processing and waste utilization					
-----	--	--	--	--	--	--

Course code		SFT3354				
Course title		Food Additives and Toxicology				
Scheme and Credits		L:2 T:0 P:0 2 credits	2	0	0	2
Pre-requisites		Food Chemistry				
Description of the Course		Course emphasis on the gaining knowlege on different ingredients and food aditives which are used in processing, preservation and storage of food products for improved quality. Course also give insight on the the mechanism of actions of different food additives, effect of processing conditions on additives as well as about the legal standards and regulations for safe use of food additives.				
Objectives of the course	1	To understand the food hazards and food safety aspects				
	2	To understand the significance of different food additives and ingredients in food quality, preservation and storage				
	3	To understand the safety of use of food additives and ingredients				
	4	To understand the effect of different process conditions on stability of food additives and ingredients				
Syllabus						
	1	Additives used in food preservation such as preservatives, antioxidants, with respect to chemistry and food uses. Food colors and dyes (Natural and synthetic) their importance in processing, Food flavours and taste enhancers in food processing.	8	0	0	8
	2	Additives used as aids in food processing such as sequesterants, emulsifier, hydrocolloids, sweeteners, acidulants etc, and their functions in food processing and storage.	8	0	0	8
	3	Safety aspects of Food Additives: Tolerance levels & Toxic levels in Foods, Legal safeguard, Risks of food additives, Contaminants, Toxicants, and anti- nutritional compounds in food systems	8	0	0	8
	4	Types of food hazards: biological, chemical and physical; Risk assessment; Existing and emerging pathogens due to globalisation of food trade.	6	0	0	6
			30	0	0	30
Suggested books/reference	1	Food Additives: Characteristics, Detection and Estimation by S.N. Mahindru in 2008 Aph Publishing Corporation, New Delhi. S.S.				
	2	Handbook of Food Toxicology by S. S. Deshpande in 2002. Marcel and Dekker AG, Basel, Switzerland.				
	3	Food Additives 2nd Edition By A L Brannen, P M Davidson, S Salminen, J H Thorngate III in 2002(eds). Marce IDekker Inc, New York.				
	4	Handbook of Food Additivies, 2ndedn, T E Furia in 1972, (ed) CRC Press, Cleveland, Ohio				
	5	Food Toxicology by Debasis Bagchi and Anand Swaroop CRC Press; 1st edition				

Outcomes		On completion of the course, the students will be able to		
	CO1	Understanding on hazards to food products the importance of food safety evalution system		
	CO1	Describe the various additives and ingredients used in food industries		
	CO2	Understand the importance and mechanisms of action of different food additives in processing, preservation and storage of food.		
	CO3	Understaning the safety of use of food additives and ingredients		
	CO4	Extrapolate the knowledge gained on food additives and ingredients in food industries		

Course code		SFT3355				
Course title		Food Preservation and Packaging				
Scheme and Credits		2L: 0T: 0P 2 credits	2	0	0	2
Pre-requisites		Food Chemistry, Food Processing Technology - I & II				
Objectives of the course	1	To understand the role of food packaging in food preservation				
	2	To understand the nature of different materials used in food packaging				
	3	To understand the various food packaging applications with respect to various food commodities				
	4	To understand different types of package testing methods employed to evaluate quality, performance and safety of food packaging materials				
	5	To understand various food-package interactions and environmental issues related to packaging				
	6	To understand newer food packaging application technologies				
Syllabus	1	Introduction to food preseravtion and Packaging; causes of food spoilage; factors affecting food spoilage; packaging as a method for preservation of foods.	6	0	0	6
	2	Different materials used in food packaging such as paper, glass, metal containers, plastics, laminates/composites; Food and Packaging material interactions including migration.	8	0	0	8
	3	Newer packaging technologies-VP/CAP/MAP; aseptic processing and packaging; active and intelligent packaging; Non-thermal preseravation technology.	12	0	0	12
	4	Testing of various packaging materials and packages for evaluation of quality; Shelf life analysis.	4	0	0	4
			30	0	0	30
Suggested books/reference	1	Packaging Media by Paine F.A. Publisher: Blackie and son Ltd., Bishop Briggs (1977)				
	2	Food Packaging and Preservation: theory and practice by Mathlouthi. M. Publisher Elsevier applied science publishers. London(1966)				
	3	Food Processing Technology by P. Fellows				
	4	Food Science by N. Potter				
Outcomes		On completion of the course, the students will be able to				
	CO1	Gain the ability to perform the root cause analysis of any food spoilage				
	CO2	Justify the role of food packaging in food preservation				
	CO3	Describe different food packaging materials and their properties and application to various food commodities				

CO5 Ability to develop the strategies to preserve the food products					
---	--	--	--	--	--

Course code		SFP3351				
Course title		Food Analysis Laboratory				
Scheme and Credits		0L:0T: 4P 2 credits	0	0	4	2
Pre-requisites		Introduction to Food Technology				
Objectives of the course	1	To give students hands on training on chemical analysis of specific food products				
	2	To analyse and quantify chemically the quality attributes of food				
	3	To identify adulterants and quality analysis of food				
	4	To train the students on different biochemical assay for food products				
Syllabus	1	Proximate composition in food			8	8
	2	Analysis of milk and dairy products			4	4
	3	Analysis of wheat flour			4	4
	4	Analysis of tea and coffee			4	4
	5	Estimation of phytochemicals			8	8
	6	Analysis of Food adulteration			4	4
	7	Discriminative and Descriptive Sensory analysis of Foods			8	8
	8	Demo of colorimeter, texture analyzer, DSC, etc.			4	4
	9	Demo of HPLC, GC-MS, etc.			4	4
	10	Demo of spray drier, extruder, SCFE, Tray drier etc.			4	4
	11	Microbial assay			4	4 8 4 4 4
	12	Enzyme assay			4	4
			0	0	#	60
Suggested books/reference	1	AOAC International. 2003. Official methods of analysis of AOAC International. 17th Ed. Gaithersburg, MD, USA, Association of Analytical Communities				
	2	Leo ML.2004. Handbook of Food Analysis. 2nd Edition. Vol 1,2 and 3, Marcel Dekker				
Outcomes		On completion of the course, the students will be able to				
	CO1	Demonstrate the knowledge of redox chemical reactions to develop a protocol for analysing specific food attributes				
	CO2	Interpret different chemical and biochemical analysis specific to food				
	CO3	Compare protocols on different types of chemical and sensory analysis in foods				
	CO4	Apply and infer about the principles of different enzyme and vitamin assays				

Course code		SFP3352				
Course title		Food Processing Laboratory				
Scheme and Credits		L:0 T:0 P:4 2 credits	0	0	4	4
Pre-requisites		Introduction to Food Technology, Food Processing I and II				
Description of the Course		Course will help to student to improve their hands on handling different food processing equipments. Also develop understanding about food product and process formulation in food industry.				
Objectives of the course	1	To analyze the integration of processing in food formulations				
	2	To design and develop the process flow chart for any product development				
	3	To design the product and process formulations in food industry				
	4	To evaluate the processing cost of any developed product				
Syllabus	1	Preparation of tomatoes products (minimum three types)	0	0	6	6
	2	Preparation of fruit preserves from selected fruits (minimum three types)	0	0	6	6
	3	Preparation of selected bakery products (minimum three types)	0	0	8	8
	4	Preparation of fermented food products (minimum three types)	0	0	4	4
	5	Preparation of value added poultry/meat/ egg products (minimum three types)	0	0	8	8
	6	Preparation of fried products (minimum three types)	0	0	4	4
	7	Preparation of milk based food products (minimum three types)	0	0	4	4
	8	Preparation of sugar based sweets/traditional Indian confection products (minimum three types)	0	0	4	4
	9	Preparation of extrudate snack products (minimum three types)	0	0	4	4
	10	Preparation of non-alcoholic beverages (minimu three types)	0	0	4	4
	11	Preparation of soy based food products (minimum three types)	0	0	4	4
	12	Demostration and preparation of dehydrated food product using spray, cabinet or vaccum dryer	0	0	4	4
Suggested books/reference	1	Handbook of Food Products Manufacturing: Principles, Bakery, Beverages, Cereals, Cheese, Confectionary, Fats, Fruits, and Functional Foods by Y.H. Hui. 2007. John Wiley & Sons, Inc., Hoboken, New Jersey, USA	0	0	#	60
	2	Meat and Meat Products Technology Including Poultry Products Technology by B.D. Sharma in 1999. Jaypee Brothers Medical Publishers Pvt. Ltd, New Delhi.				
	3	New Food Product Development: From Concept to Market place by Fuller, G.W. in 2011. 3rd ed,				

		CRCPress,UK		
	4	Preservation of Fruits and Vegetables by GiridhariLal, G.S. Siddappa,G.L.Tandon in 1998, ICAR,New Delhi.		
Outcomes		Course Outcomes (students will be able to)		
	CO1	Apply the knowledge of material balance specific to different food processing operations (K1)		
	CO2	Explain the major processing steps applied for food preparations (K2)		
	CO3	Use different food processing equipment specific to the product (K3)		
	CO4	Develop protocol for different types of food preparations (K4)		
	CO5	Apply the engineering principles to design novel food product and process(K4).		

Multidisciplinary Minors

Pharmaceutical Technology

1 2 3	Introduction to Pharmaceutical Technology 2L: 0T: 0P 2 credits OE: Biology This course will give an overview of applications of technology and engineering principles in Pharmaceutical Industry Know and explain morphology, diversity, cultivation methods, physiology and metabolism of microorganisms Understand basics of monophasic, biphasic, topical formulation, and aerosols Know the different drug categories	2	0	0	2
2	OE: Biology This course will give an overview of applications of technology and engineering principles in Pharmaceutical Industry Know and explain morphology, diversity, cultivation methods, physiology and metabolism of microorganisms Understand basics of monophasic, biphasic, topical formulation, and aerosols	2	0	0	2

CO2	Understand general principles of Pharmacology including pharmacokinetics and Pharmacodynamics.		
CO3	Know the different drug categories		
CO4	Conceptualize and develop monophasic, biphasic and other products		

Course code		SRT3352				
Course title		Pharmaceutical Chemistry				
Scheme and Credits		2L: 0T: 0P 2 credits				
Pre-requisites		Introduction to Pharmaceutical Technology				
Objectives of the course	1	To acquaint students with nomenclature, classification, molecular mechanism of action, synthesis and SAR of (a) Anti-infective agent (b) Anti-histaminic agent (c) Anti-inflammatory agents (d) Drugs acting on the cardiovascular system (e) Drugs acting on the hormonal system (f) Drugs acting on the central nervous system To train the students with the basics of Medicinal	2	0	0	2
	2	Natural Products and Phytochemistry				
Syllabus	1	Classification of Drugs and their molecular targets: Enzymes, proteins and receptors as drug targets	4	0		4
	2	Overview of Antibacterial agents; Anitparasitic agents; Antifungal agents; Antimycobacterial agents; Anticancer agents; Antiviral agents; Drugs Affecting the Central Nervous System; Cholinergic Drugs; Adrenergic Drugs; Analgesics	15	0		15
	3	Introduction to Anti inflammatory drugs; Cardiovascular Drugs; Drugs acting on hormonal systems; Other miscelleneous Classes of drugs	11	0		11
			30	0	0	30
Suggested books/reference	1	Foye's Principles Of Medicinal Chemistry W. O. Foye, Lippincott Williams & Wilkins, 6th edition, 2008.		•	Ū	
	2	Burger's Medicinal Chemistry & Drug Discovery(Vol. 1- 6) A. Burger And M.E. Wolff; John Wiley & Sons-New Jersey, 6th edition,2003				
	3	Textbook Of Medicinal And Pharmaceutical Chemistry Wilson And Gisvold, Lippincott Williams & Wilkins, Philadelphia, 11				
	4	The Practice of Medicinal Chemistry, C.G. Wermuth, Academic Press, 3 edition, 2008				
	5	Pharmaceutical Substances: Synthesis, Patents, Applications (N-Z) Kleemann Georg ThiemeVerlag- Stuttgart. Thieme, 4th edition, 2001				
	6	Dewick P.M., Medicinal Natural Products- A Biosynthetic Approach,2 edition/2002, John Wiley & Sons Ltd				
	7	Quality Standards of Indian Medicinal Plants, all volumes, ICMR				
Outcomes	+	On completion of the course, the students will be able to				
	CO1	Classify drugs based on different methods				
	CO2	Explain SAR and MOA of drugs at the molecular level of understanding				
	CO3	Apply principles of drug discovery from hit to lead to preclinical molecules				
	CO4	Theoretically predict absorption distribution, metabolism and excretion of drugs and related concept of prodrugs				

Course code		SRT3353				
Course title		Formulation Technology and Drug Delivery				
Scheme and Credits		2L: 0T: 0P 2 credits	2	0	0	2
Pre-requisites		Introduction to Pharmaceutical Technology				
Objectives of the course	1	To train the students with respect to basics and application of Technology of Solid dosage forms and introduce novel drug delivery systems				
	2	To train the students with respect to basics of validations and regulatory requirements of pharmaceuticals				
	3	To train the students with respect to basics and application of Technology of sterile pharmaceuticals				
Syllabus	1	Introduction to tablets, Preformulation considerations for tablet dosage form, Granulation techniques, Direct compression; Excipients in tablets; Tablets Formulation: Unit operations, tablet punching: physics of tablet punching, single punch and rotary tablet press, tablet tooling; quality control test; Packaging; Tablet coating: Need, stages and types	8	0		8
	2	Introduction to capsules; Preformulation considerations for capsule dosage form; Hard and soft gelatin capsules: formulation considerations, capsule manufacture equipments, quality control tests, packaging, Large scale manufacture, layout design; Microencapsulation;	4	0		4
	3	Facility design for parenteral manufacture with focus on air systems HEPA filters, environmental classes for manufacture of parenterals; Methods of sterilization; Water for Injection: Monograph IP, methods of preparation, quality control tests, storage; Containers and Closures for Parenteral Formulations; Small and Large volume parenterals: Formulation (discuss various dosage forms like solutions, suspensions, emulsions, dry powders), Quality control, Large scale manufacture and packaging with focus on equipment, Layout design and Unit operations.	8	0		8
	4	Introduction to Quality by Design, Validation, Documentation and Regulatory bodies for pharmaceuticals.	4	0		4
	5	Ayurvedic/Polyherbal Formulations (PHF): Types of Ayurvedic formulations, single herb vs polyherbal formulations, Advantages and challenges associated with PHF, Preparation and detoxification methods for Ayurvedic formulations, CCRAS Guidelines for Ayurvedic Formulation	6			
			30	0	0	24
Suggested books/reference	1	Remington-The Science And Practice Of Pharmacy (Vol.1& 2), David B.Troy, 21st edition,2006, Lippincott Williams & Wilkins

Course code		SRT3354				
Course title		Pharmaceutical Technology and Drug Design				
Scheme and Credits		2L: 0T: 0P 0 credits	2	0	0	2
Pre-requisites		Pharmaceutical Chemistry				
Objectives of the course	1	Learn how physicochemical properties / QSAR/ other computational techniques play role to design and optimize the structure of leads				
Syllabus	1	Introduction to Historical and Modern Drug Discovery- Sources of drugs/leads, Serendipity, random screening, natural sources, analogue based design, Rational drug design, Techniques and tools in modern drug discovery, Introduction to QSAR, SBDD and LBDD, Concepts of privileged structures and chemical diversity	4	0		4
	2	Physicochemical and Biopharmaceutical Properties of Drug Substances: Lipinski rule of 5, Concept of toxicophores, Insilico calculation of log P, Modification of leads to incorporate suitable ADMET properties	4	0		4
	3	2-D QSAR: History and development of 2-D QSAR, Parameters – lipophilicity and related parameters, electronic parameters, steric parameters, other parameters, Quantitative models – Hansch approach, Free Wilson analysis, the mixed approach, Statistical methods – regression analysis, partial least square and other multivariate statistical methods Design of test series in QSAR-Some examples of Hansch and other methods	4	0		4
	4	Molecular Mechanics and Energy Minimization: General features of force fields, cross terms, force field parameterization, Energy minimization – non-derivative and derivative methods, applications of energy minimization	5	0		5
	5	Docking by different techniques	3	0		3
	6	Role of Natural Products in New Drug Discovery: few selected NPs, with different pharmacophore, its source, purification and its drug target interactions, Case studies of taxol, artemisinin, etc	5	0		5
	7	Potential uese of natural products: Plant-derived molecules for perfumery, cosmetic, agrochemicals, dyes and pigments	5	0		5
			30	0	0	30
Suggested books/reference	1	Burger's Medicinal Chemistry, Drug Discovery and Development. 7th Edition Volume 1-9. By Donald J. Abraham, David P. Rotella. August 2010				
	2	Practical Application of Computer-Aided Drug Design, Paul S Charifson, Ed., Marcel Dekker, Inc., 1997				
	3	Textbook of Drug Design and Discovery, PovlKrogsgaard-Larsen, Ulf Madsen, Kristian Stromgaard, 5th Ed., 2016. Taylor and Francis.				
	4	 3D QSAR in Drug Design: Theory, Methods and Applications, Kubinyi H Ed., Leiden ESCOM, 1993. Drug Development, Hamner C. E., Ed., 2nd Ed., CRC 				
	6	Press, Boca Raton, 1990 Advanced Drug Design And Development: A Medicinal Chemistry Approach, P N Kourounakis, E. Rekka, 1st				

		ed., Taylor & Francis, Year: 1994		
	7	Lead Generation Approaches in Drug Discovery, Chapter 7: Role of Natural Products in Drug Discovery, Hugo Lachance, Stefan Wetzel, Herbert Waldmann, 2010, Wiley online library		
	8	Phytochemistry of Medicinal Plants, Vol. 29, J.T. Arnason, R. Mata, J. T. Romeo, 1995, Springer Science, Business Media New York		
	9	Total Synthesis of Natural Products, Jie Jack Li and E. J. Corey, 2012, Springer		
Outcomes				
	CO1	Understand basics of QSAR, for applications in drug design		
	CO2	Understand basics of physicochemical properties of drugs and their implications		
	CO3	Design new potential therapeutic molecules using structure based drug design		
	CO4	Design new potential therapeutic molecules using ligand based drug design		
	CO5	Rationalize the contribution of natural products in new drug discovery		

Course code		SRT3355				
Course title		Process Development for Fine Chemicals and API	2	0		2
Scheme and Credits		2L: 0T: 0P 2 credits				
Pre-requisites		Introduction to Pharmaceutical Technology, Pharmaceutical Chemistry				
Objectives of the course	1	To understand the principles of chemical process development for API and fine chemical				
	2	Acquire the knowledge of Green Chemistry, Process Safety and Hazards				
Syllabus	1	Principles of Process Development for API'S: Background information, Literature search methodologies for the development of API's and Intermediates, Selection of best route for the synthesis/manufacture of API (Green processes), Process safety, MSDS, Safety laboratory data	8	0		8
	2	Status of pharmaceutical industry: Status of bulk drugs, natural products and formulations in India vis-a-vis industrialized nations	3	0		3
	3	Chemical Technology of Selected APIs: Case studies with emphasis on rationale for selection of routes, raw materials, process control methods, pollution control procedures, polymorphs, safety, etc.	6	0		6
	4	Chemistry and Technology of Fine Chemicals: Introduction, Role of Catalysis, Atom Economy, Alternative Reagents and Catalysts, Multiproduct and Multipurpose Plants (MMPs), Reactors for fine chemicals, Safety Aspects of Fine Chemicals	5	0		5
	5	Selected Fine Chemical Technologies with examples: Alkylation, Halogenation, Oxidation, Reduction, Esterification, Nitration, and Hydrogenation	4	0		4
	6	Impurity Considerations: Introduction, Steps to optimizing reactions, Minimizing impurity formation by indentifying impurities first, Method development for separation, Synthesis and Isolation of impurities and their characterization	4	0		4
			30	0	0	30
Suggested books/reference	1	Levenspiel, O. Chemical Reaction Engineering; 3rd ed.; John Wiley & Sons, New York (1999)				
	2	Gadamasetti, K., Process Chemistry in Pharmaceutical Industry; 1st ed.; CRC Press, London (1999)				
	3	Anderson, N. G.; Practical Process Research & Development: A Guide for Organic Chemists; 2nd ed.; Academic Press, London (2012)				
	4	Harrington, P. J.; Pharmaceutical Process Chemistry for Synthesis: Rethinking the Routes to Scale-Up; Wiley, London (2011)				
	5	A. Cybulski M.M. Sharma R.A. Sheldon J.A. Moulijn;Fine Chemicals Manufacture: Technology and Engineering, Elsevier Science & Technology Books, (2001)				
Outcomes		On completion of the course, the students will be able to				
Sucomes	CO1	Understand the principles of process design along with selection of different routes.				

CO2	Get insights of underlying technologies in the manufacturing of various APIs		
CO3	Differentiate between the bulk drugs and fine chemicals and state their various applications in industry and daily life		
CO4	Explore the process of manufacture of variety of fine chemicals		

Course code		SRP3351				
Course title		Pharmaceutical Analysis Laboratory				
Scheme and Credits		0L:0T: 4P 2 credits	0	0	4	4
Pre-requisites		Chemistry Lab-I				
Objectives of the course	1	On performing the experiments, learner should be able to operate the instruments, understand its instrumentation, prepare solutions with accurate concentrations, measure the readings, calculate and interpret the results obtained				
	2	To familiarize the learner with the important aspects of accelerated stability testing and shelf life calculations				
Syllabus	1	UV spectrophotometric estimation of two components formulation by simultaneous equation method and by absorbance ratio method, Eg Caffeine and Sodium benzoate injection			4	4
	2	UV spectrophotometric estimation of formulation by Difference spectroscopy: Eg: Phenylephrine HCl ophthalmic solution			4	4
	3	Assay of finished products by UV spectroscopy (any two), using A (1%, 1 cm) eg. Paracetamol tablets, Propranolol tablets/Atenolol tablets/Hydrochlorothiazide tablets/Frusemide tablets/Albendazole tablet/Rifampicin capsules (two examples)			4	4
	4	Solubility determination of any drug/formulation by using UV spectroscopy			4	4
	5	Separation and identification of drug/Intermediate by TLC/Column chromatography			8	8
	6	Experiments based on HPLC eg. quantification of impurities in APIs			_	4
	7	Gas Chromatography (GC) handling and analyses of API intermediates			_	4
	8	Detection of residual solvent in the formulation by using Gas Chromatography			-	4
	9	Working of FTIR and Interpretation of IR spectra of any one drug.			-	4
	10	Polarimetry: Different concentrations of sugar, determination of unknown concentration and specific rotation			4	4
	11	Assay of streptomycin injection/Salicylic acid by using Colorimetry (Construction of calibration curve using linear regression analysis)			4	4
	12	Accelerated stability testing of any suitable drug/ formulation, Problems based on Arrhenius equation for shelf life calculations			4	4
S			0	0	48	48
Suggested books/reference	1	current editions of IP, BP and USP

	6	R. M. Silverstein, F. X. Webster and D. J. Kiemle, Spectrometric identification of organic compounds, John Wiley & Sons, Inc. (Indian edition), New Delhi		
Outcomes				
	CO1	Record the absorbance and calculate concentration of analyte in formulation or as an API by use of A(1%, 1cm) by UV spectrophotometer		
	CO2	Develop and optimize mobile phase composition for qualitative analysis by TLC and interpret qualitative analysis data by TLC		
	CO3	Outline working and application of HPLC		
	CO4	Outline working and application of GC		
	CO5	Understand the sample preparation technique for FTIR spectroscopy, interpret the IR spectra to identify the functional groups		

Course code		SRP3351				
Course title		Pharmaceutical Chemistry and Formulation Technology Laboratory				
Scheme and Credits		0L:0T: 4P 2 credits	0	0	4	4
Pre-requisites		Pharmaceutical Chemistry, Formulation Technology and Drug Delivery				
Description of the Course		To train the students with respect to practical aspects of Green Chemistry while preparing the commonly used organic compounds as a drugs and also train the students on advanced formulation development technology				
Objectives of the course	1	To train the learner in preparation of typical monophasic liquid and semisolid formulations and carry out their Q.C. tests, and acquaint them with some biological preparations available in market				
	2	To introduce the learner to various hands-on experimental organic synthetic techniques including column chromatography and thin layer chromatography				
Syllabus	1	Evaluation of excipients: Bulking agents for Flow properties, Bulk density, Tapped density, Carr's index, Hausner's ratio and particle size and Disintegrating agents for Swelling index			4	4
	2	Preparation and evaluation of Transdermal/ophthalmic gels			4	4
	3	Preparation of Eye drops/ and Eye ointments			4	4
	4	Preparation of Creams (cold / vanishing cream)			4	4
	5	Preparation of Paracetamol pediatric elixir			4	4
	6	Representative examples of microencapsulation (Preparation and evaluation)			4	4
	7	Solubilization of drugs by at least two novel techniques			8	8
	8	Evaluation of Glass containers (as per IP)			4	4
	9	Synthesis of one molecules/drug intermediates which may include three or more steps to isolate, purify (chemical methods and through chromatography) and characterize the product from each step			12	12
			0	0	48	48
Suggested books/reference	1	Pharmaceutical Dosage Forms Vol. I & II, Liebermann, New York, Marcel Dekker (1996)				
	2	Latest Indian Pharmacopoeia, British Pharmacopoeia, United States Pharmacopoeia				
	3	Pharmaceutical Production Facilities: Design and Applications G. C. Cole, New York Ellis Horwood (1990)				
	4	Husa's Pharmaceutical Dispensing Martin E. W. Easton Mack Pub. Co. (1971)				
	5	Transdermal Delivery of Drug A. Kydonieus Florida, CRC Press (1987)				
Quitao aa						
Outcomes						
	CO1	Prepare transdermal and ophthalmic formulations.				
	CO2	Prepare and evaluate the semisolid dosage form				
	CO3	Prepare and evaluate the monophasic/biphasic liquid				

	dosage form		
CO4	plan and develop organic synthetic routes for small organic compounds		
CO5	develop a set of separation and purification and structural characterization skills		

Multidisciplinary Minors

Materials and Polymers Technology

Semester: III Total contact hours: 30 L T P Basic Physics, Chemistry and Mathematics Description of relevance of this course in the Int. M. Tech. Program This course aims to acquain the students with fundamental knowledge of materials. The course content discusses the basic structure of solids, classification of materials and the correlation between the structure and properties. Introduction, history and evolution of materials, classification of materials, need to study of materials, bonding in atoms- Primary bonding and Secondary bonding. Crystal Structure: Concepts of unit cell and Bravais lattice, crystallographic directions and planes, Miller indices, linear and planar density, crystal defects. 2 Metals and its Alloys: Introduction, Classification, Concept of stress-strain, shear stress, torsion, tensile strength, ductility, brittleness, resilience, clughness, impact strength, hardness, creep, Mechanical behavior of Metals- Deformation of metals, Material Properties of interatomic bonding force/energies, Stiffness versus Modulus, Ferrous and Non-Ferrous alloys, effect of impurities, Heat treatment. 3 Thermodynamics: Phase rule, phase diagrams, Lever rule, Solid solutions and alloys, Invariant reactions, Fick's laws of diffusion, Mechanisms of diffusion, Phase transformation, Nucleation kinetics and growth. 4 Ceramics: Introduction, classification criteria, applications, concept of molecular weight, crystallinity, tacticity, glass transition temperature, stress-strain relationshios in polymers, stress-strain behaviour, fracture and fa			Credits = 2	to	Course Title: Introduction Material Technology	Course Code: SMT3351

Petroleum and Petrochemicals Technology

	SEM III	C	onta	ict H	lours
		L	Т	P	Tota
Course code	SPT3351				
Course title	Introduction to Petroleum Technology.				
Scheme and Credits	2L: 0T: 0P 2 Credits	2	0	0	2
Pre- requisites	Chemistry I & II, Physics I & II, Material and energy balance calculations, Mass transfer operations.				
Objectives of the course					
	To give students an overview of: Petroleum industry, its history, important petroleum product, there characterization and general refinery setup.				
Detailed contents					
	1 Introduction to petroleum and petrochemical industry, history of petroleum, Current Indian and global scenario, oil pricing, fuels from crude oil and gas, petroleum derived synthetic organic chemicals, future trends and developments.	4			4
	2 Origin of petroleum, organic and inorganic theories of origin of petroleum, Kerogen composition, composition of crude oil, hydrocarbons and non-hydrocarbons present (type, functional groups, name, structure, role etc.), classification of crude oil.	6			6
	3 Introduction to refinery, Types of refineries: simple, intermediate and complex refineries, history and current status of Indian refineries, general refinery setup and function of various units, refinery flow diagram.	4			4
	4 Crude oil fractionation: Pipe still heaters, atmospheric distillation unit (ADU), vacuum distillation unit (VDU), different petroleum fractions.	4			4
	5 Major petroleum products (LPG, gasoline, kerosene, diesel, aviation turbine fuel, lube oil etc.,), their specification (Indian context), additives used to meet requirements and testing methods for petroleum products. Treatment techniques: Fraction impurities, treatment of LPG, kerosene, gasoline, lube oil.	6			6
	6 Major petrochemical products, Feed stock for petrochemicals	6			6
	Total	30			30
Suggested books.					
	1Petroleum refining, Technology and Economics by J H Gary and G E Handwork.				
	2 The Chemistry and Technology of Petroleum by James G Speight,				

	3	Composition and properties of Petroleum by H J Neumann, B P Lahme and B Severin		
	4	Modern Petroleum Technology : G D Hobson and W Pohl		
	5	Modern petroleum refining processes by B K Bhaskara Rao		
Outcomes				
	CO1	Student will know the history and origin of petroleum.		
	CO2	Student will understand the importance of petroleum technology.		
	CO3	Student will know the specifications of various petroleum products.		
	CO4	Student will be able the list out different processes involved in petroleum refinery.		

		SEM IV	C	onta	ct H	lours
			L	Т	Р	Total
Course code		SPT3352				
Course title		Petroleum refining processes				
Scheme and Credits		2L: 1T: 0P 3 Credits	2	0	0	2
Pre- requisites		Chemistry I & II, Material & Energy Balance Calculations, Physical Chemistry, Introduction to petroleum technology.				
Objectives of the course		Students will learn the thermodynamics, kinetics, mechanism and process flow diagram of various refining processes used to improve the quality of different petroleum fraction.				
Detailed contents						
	1	Separation of oil and gas, pre-treatment methods, removal of moisture and salts, transportation and storage.	2			2
	2	Thermal cracking, thermal processing like visbreaking, delayed coking, fluid coking, flexicoking.	4			4
	3	Catalytic cracking: Cracking reactions, cracking catalysts, cracking units, fluidized bed catalytic cracking (FCC), new designs for FCC units.	4			4
	4	Hydrocracking and hydro-processing: Hydrocracking reactions, hydrocracking catalysts, hydrocracker unit, hydro- processor, hydrogen production and purification.	4			4
	5	Catalytic reforming: Reforming reactions, feed preparations, reforming catalyst, reactor design, catalytic reformer.	8			8
	6	Light end processes: Isomerization, alkylation and polymerisation.	8			8
		Total	30		0	30
Suggested						
books.	1	Petroleum Refining Engineering by W L Nelson.				
	2	Petroleum Processing, Principles and Applications by R J Hengstebeck.				
	3	Modern Petroleum Technology by G.D. Hobson				
Outcomes		Students will learn				
	CO 1	to identify the process/technique to improve quality of given petroleum fraction.				
	CO 2	Draw process flow diagrams/process block diagrams for any given refinery operation.				

		SEM V	C	onta	et H	ours

Course title		Reservoir Technology				
Scheme and		2L: 1T: 0P 3 Credits	2	0	0	2
Credits						
Pre-		Introduction to petroleum technology, momentum transfer,				
requisites		mass transfer operations, Materials physics.				
Objectives		This course focuses on typical engineering operations/processes				
of the		carried out on crude oil prior to its refining. These operation				
course		are: drilling, exploration, and oil recovery. This will also				
		provide student with a broad outline of reservoir engineering.				
Detailed						
contents						
	1	Petroleum geology, types of rocks, sedimentary rocks, Oil and	4			4
		gas traps, migration and accumulation of oil and gas, Petroleum				
		reservoir, properties of petroleum and gas in rocks,				
		fundamentals of oil and gas flow in porous media. Natural gas				
		and gas hydrates.				
	2	Reservoir Fluids: Phase behaviour of hydrocarbon system, ideal	4			4
		& non ideal system, equilibrium ratios, reservoir fluid				
		sampling, PVT properties determination, different correlations				
		and laboratory measurements, data reduction, evaluation and				
		application.				
	3	Reserve estimation: resource & reserve concept, Different	4			4
		reserve estimation techniques: Volumetric, MBE, decline curve				
		analysis, latest SPE/ WPC/ IS classification, predicting				
		reservoir performance, introduction to reservoir simulation.				
	4	Exploration: Geological, geophysical and geochemical methods	4			4
		of exploration, basin and exploration strategies, application of				
		remote sensing in petroleum resource development, instruments				
		used – principles and working; magnetometers, seismogram,				
		radiation counters and gravimeters.				
	5	Drilling: Drilling methods (vertical, deviated and horizontal),	6			6
		cable tool, rotary and turbo drilling, drilling equipment: Drilling				
		rigs and drilling string, drilling fluid- composition and				
		functions.				
	6	Oil recovery: Well logging and well completion, well testing	8			8
		and control, free flow and gas lifting, mechanical pumping,				
		primary oil recovery, secondary oil recovery and enhanced oil				
		recovery methods, gravity drainage, water flooding.				
~		Total	30			30
Suggested						
books.						
	1	Advanced Reservoir Engineering by T. Ahmed and P.				
		McKinney.				
	2	Principles of Petroleum Reservoir Engineering by G.L.				
		Chierici.				
	3	Applied Petroleum Reservoir Engineering by R.E, Terry, M.				
		Hawkins and B.C. Craft.				
	4	Fundamentals of Reservoir Engineering by L.P. Dake.				
Outcomes		Students will				
	CO1	Learn the basic operations and challenges during drilling.				
	CO2	Learn the various techniques of oil recovery.				
	CO3	Understand the key concepts of petroleum geology.

Pre-		Mass transfer operations, Separation processes, Heat transfer,				
requisites		Chemical reaction engineering, Petroleum refining processes				
Objectives		In this student will learn to apply their knowledge of mass				
of the		transfer, heat transfer, equipment design and chemical reaction				
course		engineering to complex processes of petroleum refineries.				
Detailed						
contents						
	1	Design aspects of pipe still heaters, radiant and convection	3			3
		sections, calculation of heat flux, radius and number of pipes.				
		Furnace design: Heat load calculations for furnace heaters,				
		typical heat flux values, basic constructional features, different				
		furnace types, factors to be considered in the design of fired				
	-	heaters.				
	2	Distillation curves: ASTM, TBP, EFV distillation curves;	6			6
		experimental details, their comparison and inter relations by				
		Nelson and Edmister correlations. Multicomponent vapour				
		liquid equilibrium, flash distillation, key components, dew				
		point and bubble point calculations. Multicomponent				
		distillation, calculation of number of stages in distillation,				
		calculation of minimum reflux and number of plates, feed plate				
		location.				
	3	Atmospheric distillation tower: Types of refluxes, concept of	6			6
		overflash, overall material balance, estimation of top, bottom,				
		side draw tray temperatures, energy balance for atmospheric				
		distillation tower. Vacuum distillation tower: Type of				
		operations, vacuum distillation column internals, flash zone and				
		tower base calculations, flash zone pressure, steam				
		requirements, heat and material balance calculations.				
	4	Multicomponent liquid - liquid equilibrium relations,	3			3
		estimation of number of stages by triangular and rectangular				
		diagrams for complex petroleum oils.				
	5	Multicomponent absorption and stripping in refinery	6			6
		operations, absorption and stripping factors and their				
		significance. Mathematical analysis of multi- component				
		absorbers and strippers, Kremser-Brown absorption factor				
		methods.				
	6	Adsorption, breakthrough phenomena, concept of adsorption	6			6
		zone height, unsteady state fixed bed operation, LUB concept,				
		design of absorbers. Sorbex technologies and its concepts.				
		Total	30			30

Pre- requisites	Chemistry I & II, Material & Energy Balance Calculations, Physical Chemistry, Introduction to petroleum technology.				
Objectives of the course	This course focusses on manufacturing processes of all important petrochemical products.				
Detailed contents					
	1 Chemicals derived from C1-C2. Chemicals from natural gas, naphtha etc. Principal reactions of Methane, ethane, ethylene and acetylene. Naphtha and gas cracking to produce C2-C4 olefins, dienes and aromatics.	4			4
	2 Chemicals from C3 and C4. Production of isopropanol, acrylonitrile, acrylic acid, propylene oxide, propylene glycol, polymers and copolymers of propylene, dehydrogenation of butane, production of MTBE, acetic acid from butene, butadiene from butane, maleic anhydride.	4			4
	3 Chemicals from high molecular weight n-paraffin: Oxidation o n-paraffin to fatty acids and fatty alcohols, chlorination and sulfonation of n-paraffin.	f 4			4
	4 Petroleum aromatics. Chemicals based on benzene, toluene and xylene (BTX), synthesis of ethylbenzene, phenol, aniline, nitrobenzene, chlorobenzene, styrene, cumine, benzoic acid, o-cresols, benzaldehyde, phthalic anhydride.	4			4
	5 Polymerization fundamentals, Ziegler Natta catalysts, polymerization of simple olefins such as ethylene and propylene. Synthetic rubbers, manufacture, general characteristics, raw materials for synthesis, range of synthetic rubbers, PBR, SBR, NBR, butyl rubber.	2			2
	6 Waxes - Introduction, History of waxes and their applications, definitions, classification- natural, partially synthetic and fully synthetic wax. Petroleum wax: Macro-crystalline wax (paraffi wax), microcrystalline wax, division into product classes of paraffin wax.	1 6			6
	 Lubricating oils, specifications, characteristics, production of lube specialities, additives, refining of lubricating oil: solvent chemicals & hydrogenation method, dewaxing, deasphalting etc. Manufacturing of grease, manufacture of specialty oils viz. insulating oil, transformer oil, white oil, etc. 	6			6
	Total	30			30
Suggested books.					
	1 Fundamentals of Petroleum Chemicals Technology by P.Belov	7			

	2	Encyclopedia of Chemical Technology, Kirk-Othmer.		
	3	Ulmann's Encyclopedia of Industrial Chemistry		
	4	Dryden's Outlines of Chemical Technology		
	5	A Text Book on Petrochemicals, B.K.Bhaskara Rao.		
Outcomes		Students will		
	CO1	Draw process flow diagrams/process block diagrams for the manufacture of various petrochemicals from process description.

Pre-requisites						
Description of the Course		This course will introduce the student to analytical techniques used for lipid characterization, common lipid transformations, soaps, detergent synthesis, etc.				
Objectives of the course	1	<ol> <li>Students will understand and interpret the analytical numbers in testing of oils and fatty acids adulteration of oils</li> <li>Apply and infer the physical and chemical testing of oils, fatty acids and oleochemicals</li> </ol>				
Syllabus	1	Analysis of Oils and Fats: Acid value, Iodine value, Saponification value, Hydroxyl value, Peroxide value, anisideine value, Soap stock analysis/unsap matter, Ash content				
	2	Determination of physical and chemical characteristics of Vanaspati, margarine, ghee and waxes				
	3	To detect castor oil and soyabean oil mixture using TLC, Detection of adulteration oils/ Identification of Oils in mixture				
	4	Acid Oil analysis: FAME-GC analysis				
	5	Analysis of Butter: Salt content, TFM, MP				
			0	0		
Suggested books/reference	1	Bailey's Industrial Oil and Fat Products, Sixth Edition Vol. 1:Edible Oil and Fat Products:Chemistry, Properties, and Health Effects, Ed. Fereidoon Shahidi, John Wiley & Sons, Inc., Wiley Interscien				
	2	Fatty Acids by Robert Johnson				
	3	Fats and Oils Handbook by Bockisch Michael				
	4	The Chemistry of Oils and Fats: Sources, Composition, Properties and Uses – Frank D. Gunstone, Blackwell Publishing Ltd,				
	5	Manual of methods of analysis of foods (oils & fats) -FSSAI Handbook (2015)				
Outcomes		On completion of the course, the students will be able to				
	CO1	Analyze and evaluate physical characteristics of oils like specific gravity, refractive index, color, viscosity etc. (K4)				
	CO2	Evaluate properties of oils, fatty acids and oleochemicals like acid value, sap value, iodine value, oxidation, crystallization, oxirane value, amine value etc. (K5)				
	CO3	Interpret the analytical numbers in testing of oils and fatty acids, adulteration of oils				

Course code		SOP3352				
Course title		Lipids Laboratory II				
Scheme and Credits		0L:0T: 4P 2 credits	0	0	4	2
Pre- requisites		Lipid Lab 1, Lipid Processing Technology I, Production and Applications of Soaps, Surfactants and Detergents				
Syllabus	1	Solvent Extraction: oil extraction from oil seeds				0
	2	Aqueous Extraction: oil extraction from oil seeds				
	3	Hydraulic Expelling: oil extraction from oil seeds				
	4	Refining Of Crude Edible Oil: physical/chemical refining of oils				
	5	Double Solvent Extraction: oil extraction from oil seeds				
	6	Wax processing and analysis: Crystallization process, oil content				
	7	Splitting of Purified Wax				
	8	Analysis of Detergents: Foaming, wetting test, surface tension, active matter				
	9	Analysis of Soap: TFM, Glycerol Content				
	10	Splitting of vegetable oils to get MAG, DAG FA and the analysis using HPLC				
			0	0	0	0
Suggested books/ reference	1	Bailey's Industrial Oil and Fat Products, Sixth Edition Vol. 1: Edible Oil and Fat Products: Chemistry, Properties, and Health Effects, Ed. Fereidoon Shahidi, John Wiley & Sons, Inc., Wiley Interscience

course	3					
	1	Methods of Desizing of cotton woven fabric – acidic, enzymatic, and oxidative, qualitative and quantitative evaluation of desizing efficiency- TEGEWA scale staining, loss in weight, water absorbency				
Detailed contents	2	Scouring of cotton-open boil, pressure boil; Scouring of knitted cotton fabric – conventional and bio-scouring; Evaluation of scouring efficiency-Drave's test, sinking time, wicking property, loss in weight, core alkali determination – boil fabric and check pH, phenolphthalein				
	3	Bleaching of cotton with oxidative and reductive bleaching agent, Scouring and bleaching of polyester/cotton blends.				
	4	Mercerisation of cotton, Evaluation of mercerization – Shrinkage, Barium Activity no., dye uptake, strength and elongation; microscopic observation.				
	5	Colouration of Different Natural and Synthetic Fibres				
		Total	0	0	60	60
	CO1					
Outcomes	CO2					
Guttonites	CO3					
	CO4
