## Preamble

The Institute revamped the syllabi of various courses in 2023 as per National Education Policy 2020. All the courses are credit based and the evaluation are grade based. The credit system is a systematic way of describing an educational programme by attaching credits to its components. The definition of credits is based on student workload, learning outcomes and contact hours. It is a student-centric system based on the **student workload** required to achieve the objectives of a programme. Each theory course consists of Lectures and tutorials. During tutorial session it is expected that the problem solving / case studies / relevant real life applications / student presentations / home assignments/ individual or group projects are discussed in presence of the teacher. Teacher can have the freedom to interchange lectures / tutorials depending upon the need. Each laboratory course consists of practical hours and/or extra lecture hours depending upon the need. The Institute gives emphasis on continuous evaluation with considerable freedom to the teacher in deciding the mode of evaluation of the students. It is desirable to revise the syllabi of various courses every 5 – 6 years. Accordingly, the Int. M. Tech. syllabus is being revised. The revised syllabus comes into effect for first year undergraduate Chemical Engineering students from the academic year 2023-24.

Detailed discussions were conducted by the syllabus revision committee of the Department and the following Programme Education Objectives (PEO), Programme Outcomes (PO) and Graduate Attributes (GA) were decided. The syllabus revision was carried out in view of the following PEO, PO and GA:

### Programme Education Objectives

1. Create awareness amongst students about the social/industrial demands and role of chemical engineer in the society
2. Incorporate a culture of research and Innovation by providing students with latest facilities
3. Provide a platform to the students to interact with leading teachers, scientists and industry practitioners
4. Multi-faceted development of students through co-curricular and extra-curricular activities, participation in various events
5. Build technical and managerial capabilities amongst students to meet the needs of society and industry

### Programme Outcome

1. Chemical Engineers having sound knowledge of mathematics, sciences, engineering fundamentals
2. Chemical Engineers with knowledge of fundamentals and innovation to solve the problems related to energy, food, environment, healthcare, etc.
3. Chemical Engineers with ability to keep abreast with the scientific literature, new technologies and new developments
4. Chemical Engineers who can work on complex problems in team and multidisciplinary situations
5. Chemical Engineers who can help government, society and industry in managerial activities related to chemical and allied industries
6. Chemical Engineers who can help government, society and industry to do technology development related activities for chemical and allied industries
7. Chemical Engineers who can cater to the needs of chemical industry, research organizations and academic institutes
8. Chemical Engineers who can set-up their own ventures and generate employment
9. Chemical Engineers who can promote awareness in society about Chemical Engineering profession

### Graduate Attributes

1. Problem analysis and solving skills
2. Familiar with usage of modern tools, techniques
3. Communication Skills
4. Capacity to analyze new concepts
5. Capacity to analyze and interpret experimental dataCapacity to analyze business trends

6. Capacity to design, optimize and operate equipment and plants safely, economically and effectively
7. Design and Development of solutions to industrial and societal needs
8. Skills related to Project Management and Economics
9. Skills to analyze scientific literature including patents
10. Ethics

### Syllabus Structure for Int. M. Tech.

#### Semester I

Course Code	Subjects	Course Type	Credits	Hrs/Week		
				L	T	P
CHT3151	Applied Chemistry	BSC	2	2	0	0
CHP3151	Applied Chemistry Lab	BSC	2	0	0	4
MAT3151	Mathematics-I	BSC	4	3	1	0
PHT3151	Applied Physics	BSC	2	2	0	0
PHP3151	Applied Physics Lab	BSC	2	0	0	4
EST3151	Structural Mechanics	ESC	2	2	0	0
ESP3151	Structural Mechanics Lab	ESC	2	0	0	4
ESP3152	Engineering Graphics with Computer Aided Modeling	VSEC	2	0	0	4
HUP3151	Communication Skills- English	AEC	2			4
HUT3152	OPEN Activity- Sports/ Fine arts/Yoga/ Music/NSS	CCA	2			4
<b>Total</b>			<b>22</b>	<b>9</b>	<b>1</b>	<b>24</b>

#### Semester II

Course Code	Subjects	Course Type	Credits	Hrs/week		
				L	T	P
CHT3152	Applied Chemistry II	BSC	2	2	0	0
MAT3152	Mathematics - II	BSC	4	3	1	
EST3153	Electrical Engg and Basic Electronics	ESC	2	2	0	0
ESP3153	Electrical Engg and Basic Electronics Lab	ESC	2	0	0	4
EST3152	Mechanical Engg	ESC	4	2	1	1
EST3154	Introduction to Chemical Engineering	ESC	2	2		
CEP3151	Material Balance and Energy Balance Calculations	PCC	2			4
ESP3154	Engineering Applications of Digital computers	VSEC	2			4
HUT3153	MOOC- Indian Knowledge System	IKS	2	2		
HUT3154	OPEN Activity- Sports/ Fine arts/Yoga/ Music/NSS	CCA	2			4
<b>Total</b>			<b>24</b>	<b>13</b>	<b>2</b>	<b>17</b>

Note: Universal Human Values (UHV) an audit course to be taken in inter-semester break after Semester-II to be taken as MOOC course.

\*\* Students will undertake these co-curricular activities such as sports / Fine Arts / Yoga / Music / Literature etc administered through various clubs under Technological Association approved by Dean, Students Affairs.

BSC: Basic Science Course; ESC: Engineering Science Course; Program Core Course; PEC: Program Elective Course; MDM: Multidisciplinary Minor; OE: Open Elective Course; VSEC: Vocational and Skill Enhancement Course; AEC: Ability Enhancement Course; IKS: Indian Knowledge System Course; VEC: Value Education Course; FP: Field Project; IPT: In-plant Training = On Job Training

**Semester III**

Course Code	Subjects	Course Type	Credits	Hrs /week		
				L	T	P
CET3251	Fluid Flow	PCC	2	1	1	
CET3252	Heat Transfer	PCC	2	1	1	
EST3155	Engineering Thermodynamics	PCC	2	1	1	
CET3253	Industrial Chemistry and Reaction Engineering	PCC	4	3	1	
CEP3251	Chemical Engineering Lab-I	PCC	2			4
XXT	From sciences and/or any other Engineering Discipline	MDM	2	2		
CHTxxxx	From Basic Sciences (Chemistry)	OE	4	2		4
XXT	From Basic Sciences (Physics/ Biology)	OE	2	2		
HUT3155	Communication Skills-Marathi (Any other language will be using MOOCS)	AEC	2	2		
HUT3156	Basic Principles of Finance & Economics	Management	2	2		
CET3258	Environmental Sciences	VEC	2	2		
			<b>26</b>	<b>18</b>	<b>4</b>	<b>8</b>

**Semester IV**

Course Code	Subjects	Course Type	Credits	Hrs/week		
				L	T	P
CET3254	Chem Engg Operations	PCC	4	2	2	
CET3255	Process Safety	PCC	2	1	1	
CET3256	Instrumentation and Process Dynamics	PCC	2	1	1	
XXT	From sciences and/or any other Engineering Discipline	MDM	2	2		
XXP	From sciences and/or any other Engineering Discipline	MDM	2			2
XXT	From Basic Sciences (Chemistry/ Physics/Biology / Maths/ material Science)	OE	2	2		
CEP3252	Chemical Engg Lab-II	PCC	2			4
HUT3157	Industrial Management	Management	2	2		
	Digital Computation in Emerging areas(AI/ML/DA)	VEC	2			4
	Community Projects	Field Project	2			4
CETxxxx	Chemical Engg Elective – I	PEC	4	3	1	
<b>Total</b>			<b>30</b>	<b>13</b>	<b>5</b>	<b>12</b>

# Students will undertake community projects as individual or group related to study of societal technological activities through various organization such as Lions club, Teach India, Marathi Vidnyan Parishad, CSR projects outsourced by various industries, ISR activities administered through Technological Association approved by the Dean, Student Affairs.

**Semester V**

Course Code	Subjects	Course Type	Credits	Hrs/week		
				L	T	P
CET3351	Chemical Reaction Engineering	PCC	2	1	1	
CET3352	Momentum Transfer	PCC	2	1	1	
CET3353	Chemical Engg Thermodynamics	PCC	4	3	1	
CEP3253	Chemical Engineering Lab - III	PCC	2			4
CEP3255	Process Simulation Lab - I	VSEC	2			4
CETxxxx	Chemical Engg Elective-II	PEC	4	3	1	
CETxxxx	Chemical Engg Elective-III	PEC	4	3	1	
XXT	From sciences and/or any other Engineering Discipline	MDM	2	1	1	
XXT	From sciences and/or any other Engineering Discipline	MDM	2			2
CET3361	Honors Course -1/Research-1	PCC	4	3	1

<b>Total</b>			<b>22</b>			

## Exit Options

The exit paths for the program were discussed and resolved to be as follows:

Exit Option (Semesters)	Nomenclature of Exit Option
Year 1 (2 Semesters)	Certificate (Chemical Engineering) (46 credit)
Year 2 (4 Semesters + IPT)	Diploma (Chemical Engineering) (102 credit)
Year 3 (6 Semesters + IPT)	B. Voc. (Chemical Engineering) (160 credit)
Year 4 (8 Semester + IPT)	<ul style="list-style-type: none"><li>• B. Tech. (Major: Chemical Engineering, MDM minors) (181 credit)</li><li>• B. Tech. with Honors and Minor (Major: Chemical Engineering, MDM minors) with option for 1 year M. Tech. Degree (199 credit)</li><li>• B. Tech. with Research and Minor (Major: Chemical Engineering, MDM minors) with option for 1 year M. Tech. Degree (199 credit)</li></ul>
Year 5 (10 Semesters)	<ul style="list-style-type: none"><li>• M. Tech. (Major: Chemical Engineering, MDM minors), one year [+ B. Tech. with Honors and Minor (Major: Chemical Engineering, MDM minors) with option for 1 year M. Tech. Degree]</li><li>• M. Tech. (Major: Chemical Engineering, MDM minors), one year [+ B. Tech. with Research and Minor (Major: Chemical Engineering, MDM minors) with option for 1 year M. Tech. Degree]</li></ul>

- Multidisciplinary Minor to be selected based on student choice and academic performance at the end of Semester II.
- Choice of Honors to be available to the student and be selected, if CGPA at the end of Semester IV is greater than 7.5.

**First Year  
Semester ONE**

	<b>Course Code:</b> CHT3151	<b>Course Title: Applied Chemistry-I</b>	<b>Credits = 2</b>		
	<b>Semester: I</b>		<b>Total contact hours: 30</b>	<b>L</b>	<b>T</b>
			<b>2</b>	<b>0</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>					
1	To introduce the students to the principles of analytical chemistry and physical chemistry				
2	Describe the fundamental concepts related to Basic instrumentation and chromatographic analysis.				
3	To the Thermodynamics of surfaces and kinetics of the chemical reactions				
4	To study the role of heterogeneous catalysis in chemical reactions				
5					
<b>List of Prerequisite Courses</b>					
	Standard XII Chemistry				
<b>Course Contents (Topics and subtopics)</b>					<b>Reqd. hours</b>
<b>1</b>	Introduction to analytical Chemistry: Accuracy precision, Errors, Qualitative and Quantitative analysis, Chemical concentrations. Good laboratory practices				<b>4</b>
<b>2</b>	Conventional methods of analysis – Volumetric and gravimetric methods. Colorimetric, Conductometric, Potentiometric, Complexometric and precipitation titration.				<b>4</b>
<b>3</b>	Chromatographic separation methods: General principle of chromatography, classification of chromatographic techniques. Paper, thin layer, GC and HPLC chromatographic techniques. Spectroscopic methods: Principle, Instrumentation, Applications of UV-Vis spectrophotometer				<b>6</b>
<b>4</b>	Surface/ interfacial tension. Measurement of surface tension, Thermodynamics of surfaces: Gibbs adsorption equation and isotherms. Surface active agents: Types and applications. Surfactant aggregates.				<b>6</b>
<b>5</b>	Kinetics: Review of rate of reaction, rate constant, effects of the following on rate of reaction: concentration, temperature. Derivation of rate expression for Second order reactions, Complex reactions: parallel, consecutive, reversible, chain, steady state reactions.				<b>8</b>
<b>6</b>	Heterogeneous and heterogenous catalysis, Kinetics of reaction on solid surface, Enzyme and photo-catalysis.				<b>2</b>
					<b>30</b>
<b>List of Text Books</b>					
	1. Fundamentals of Analytical Chemistry by D. A. Skoog, D. M. West, F. James Holler and S. R. Crouch, Cengage Learning, 2014.				
	2. Principles of Instrumental Analysis by D. A. Skoog, F. James Holler and S. R. Crouch, Cengage Learning, 2007				
	3. Instrumental methods of Chemical Analysis, E.W. Ewing, McGraw Hill.				
	4. Chemical Kinetics and Catalysis, R.J. Masel, John Wiley and Sons				
	5. Chemical Kinetics and Reaction dynamics, Paul H. Houston, McGraw Hill				
	6. Principles of Heterogeneous Catalysis, J.M. Thomas and W.J. Thoma				
<b>List of Additional Reading Material / Reference Books</b>					

<b>Course Code: CHP3151</b>		<b>Course Title: Applied Chemistry Laboratory</b>		<b>Credits = 2</b>		
<b>Semester: I</b>		<b>Total contact hours: 60</b>		<b>L</b>	<b>T</b>	<b>P</b>
				<b>0</b>	<b>0</b>	<b>4</b>
<b>Course Outcomes (students will be able to.....)</b>						
1	Students will be able to list steps for identifying simple organic compounds.					
2	Students will be able to list some methods of separation of organic compounds.					
3	List simple methods of chemical analysis					
4	Determination of physic chemical parameters using simple laboratory tools					
<b>List of Prerequisite Courses</b>						
	Standard XII Chemistry					
<b>Course Contents (Topics and subtopics)</b>						
						<b>Reqd. hours</b>
1	<b>ORGANIC CHEMISTRY:</b> a) Identification of an organic compound through elemental analysis, group detection, physical constants (m.p and b.p) and derivatisation. b) One-step synthesis of organic compounds: Common synthetic methods using in reactions for the synthesis of pharmaceutical and biological importance molecules and optimization of reaction conditions, and Progress of the reactions monitoring by thin layer chromatography (TLC) and IR analysis. c) Separation and purification of binary mixtures of the type (2): liquid-liquid by distillation, dissociation –extraction, crystallization, etc.					20
2	<b>PHYSICAL CHEMISTRY:</b> a) Determination of the dissociation constant of the weak electrolyte using conductometry b) Determination of Critical Micelle Concentration (CMC) of a Surfactant c) Study of kinetics of a reaction by using spectrophotometric method.					20
3	<b>ANALYTICAL CHEMSITRY:</b> a) Volumetric Titration: Colorimetric : determination of alkalinity of water b) Conductometric titration: Determination of total dissolved sulphate in water sample c) UV-Vis spectroscopy: i) to find out the absorption maxima, ii) Beers Lambert Law verification and iii) concentration of a substance from a given sample. d) High pressure liquid Chromatography (HPLC) Determining the concentration of an active ingredient in a marketed product					20
<b>List of Text Books</b>						
1	Practical Organic Chemistry, by I.L. Finar					
2	Practical physical Chemistry – B.Viswanthan and P.S. Raghavan					
3	Practical physical Chemistry- Alexander Findlay					
4						
<b>List of Additional Reading Material / Reference Books</b>

				<b>4</b>	<b>0</b>	<b>0</b>
<b>List of Prerequisite Courses</b>						
HSC Standard Mathematics						
<b>List of Courses where this course will be prerequisite</b>						
Applied Mathematics – II (MAT XXXX)						
<b>Description of relevance of this course in the Int. M. Tech. Program</b>						
This is a basic Mathematics course. This knowledge will be required in almost all subjects later on. This knowledge is also required for solving various mathematical equations that need to be solved in several chemical engineering courses such as MEBC, momentum transfer, reaction engineering, separation processes, thermodynamics, etc.						
<b>Course Contents (Topics and subtopics)</b>						<b>Hours</b>
1	<b>Calculus of one variable:</b> Review of Mean Value theorems, Higher order differentiation and Leibnitz Rule for the derivative, Taylor’s and Maclaurin’s theorems and applications to error estimates, convexity of functions, Local Maxima/Minima.					8
2	<b>Multivariable calculus:</b> Functions of two or more variables, Limit and continuity, Partial differentiation, Directional derivatives, Total derivatives, Chain Rules of partial derivatives, Taylor’s theorem for multivariable functions and its application to error calculations, Local and absolute Maxima/Minima					10
3	<b>Integral Calculus:</b> Beta and Gamma functions, Differentiation under the integral sign, Multiple Integrals, Line and surface integrals and applications to Greens, Gauss-Divergence and Stokes theorem					12
4	<b>Linear Algebra-I:</b> Systems of linear equations, matrices and Gauss elimination, Vectors in $\mathbb{R}^n$ , notion of linear independence and dependence. Vector subspaces of $\mathbb{R}^n$ , basis of a vector subspace., row space, null space, and column space, rank of a matrix. Determinants and rank of matrices. Abstract vector spaces, linear transformations, matrix of a linear transformation, change of basis and similarity, rank-nullity theorem and its applications					8
5	<b>Linear Algebra-II:</b> Inner product spaces, orthonormal bases, Gram-Schmidt orthogonalization process, Eigenvalues and eigenvectors, characteristic polynomials, eigenvalues of special matrices (orthogonal, unitary, Hermitian, symmetric, skew-symmetric, normal), Orthogonal projection and its application to least methods Diagonalization of matrices and its applications stochastic matrices, Matrix Factorization, Applications such as SVD, PCA etc.					8
6	<b>Ordinary Differential Equations:</b> Review of first and second order ODEs (constant coefficient), Existence and Uniqueness theorems for first order ODEs. Higher order Linear ODE with constant and variable coefficient, Solutions of Initial and Boundary value problems, Solving initial value system of linear ordinary differential equations.					8
7	<b>Ordinary Differential Equations -II:</b> Power series method of solving ODE's and special functions, Legendre Polynomials Bessel functions and applications.					6
<b>List of Textbooks / Reference Books</b>						
1	G. Strang, Linear Algebra and its Applications (4th Edition), Thomson (2006).					
2	W. Keith Nicholson, Linear Algebra with Applications, Lyryx Learning Inc					
3	Howard Anton, Elementary Linear Algebra, Wiley (2016)					
4	Arnold J. Insel, Lawrence E. Spence, and Stephen H. Friedberg, Linear Algebra, Pearson					
5	E. Kreyszig, Advanced Engineering Mathematics (8th Edition), John Wiley (1999). (Officially prescribed)					
6	S. R. K. Iyengar, R. K. Jain, Advanced Engineering Mathematics Narosa.					
7	Marsden, J.E., Tromba, Anthony, Weinstein, Alan, Basic Multivariable Calculus.					
<b>Course Outcomes (students will be able to....)</b>						
CO1	understand the notion of differentiability and apply these concepts to find maxima and minima of functions of one and several variables					K1, K3, K4
CO2	Understand different techniques for evaluating single and multiple integrals and apply them compute surface and volume integrals.					K2, K3, K4,
CO3	Demonstrate their understanding on different concepts in vector spaces in solving computational problems related to matrices and determinants, such as solving systems of linear equations, etc.					K1, K2, K3

CO4	Understand the computational and geometrical concepts related to eigenvalues and eigenvectors and apply them to solve computational problems arising from chemical engineering	K1, K2, K3
CO5	Build mathematical models governed by differential equations to formulate chemical engineering problems and solve the equation using appropriate analytical techniques	K3, K4, K5, K6
CO6	Solve ordinary differential equations using power series method and understand the utility and applications of various orthogonal functions in different chemical engineering problems	K3, K4, K5
K1 – Remembering, K2 – Understanding, K3 – Applying, K4 – Analyzing, K5 – Evaluating, K6 – Creating		

Course Code: PHT3151		Course Title: Applied Physics			Credits = 2			
					L	T	P	
Semester: I		Total contact hours: 30			2	0	0	
<b>Course Outcomes (students will be able to...)</b>								
1	Assign Miller indices to various crystallographic planes and directions in a crystal lattice, thereby understand periodicity in the crystal lattice.							
2	Analyze a given x-ray diffraction pattern to deduce the crystal structure of the material and calculate the values of the basic structural parameters.							
3	Classify solids, and in turn semiconductors, based on electron occupancy and calculate basic quantities related to charge transport in them.							
4	Use basic vector calculus to describe the laws of electrostatics and magnetostatics.							
5	Apply the laws of electrostatics to dielectric materials.							
6	Understand the microscopic origins of magnetism in materials through semi-classical theories.							
<b>List of Prerequisite Courses</b>								
1	Standard XI and XII Physics course							
2	Standard XII Chemistry course							
<b>List of Courses where this course will be prerequisite</b>								
1	Applied Physics Laboratory (Sem-II)							
2	Materials Technology (Sem-VI)							
3	Materials Science Minor program courses (Sem-III, IV, V, VI, VII, VIII)							
4	Open Elective courses from Physics Department (Sem-II, IV, V)							
<b>Description of relevance of this course in the B. Chem.Engg. Program</b>								
Materials and their properties play a key role in the field of chemical engineering and technology. The Applied Physics course will provide the students with the necessary fundamentals to develop a broad understanding of various aspects related to materials, and thereby equip them with the ability to apply it wherever required in their course of study.								
<b>Course Contents (Topics and subtopics)</b>						<b>Reqd. hours</b>		
<i>Solid State Physics</i>								
	Crystal Structure of Solids: A revision of concepts of a lattice, a basis, unit cell, different crystal systems (SC, BCC, FCC, HCP), co-ordination number and packing fractions. Single crystalline, Polycrystalline, and Amorphous materials.						3	
	Crystallographic planes and directions: concept of Miller indices and its determination, examples; calculation of inter-planar spacing in terms of Miller indices.						3	
	Determination of crystal structure using X-rays: Bragg's law of X-ray diffraction, types of diffractometers, Indexing diffraction peaks and calculation of various lattice parameters and crystallite size						4	
	Energy band in solids and classification of solids, the concept of Fermi level and Fermi distribution function, Intrinsic and extrinsic semiconductors, Transport properties of semiconductors: Conductivity in semiconductors and its dependence of carrier concentration and mobility.						5	
<i>Electric and Magnetic properties of materials</i>								
	Revision of the laws of electrostatics and magnetostatics with illustrative examples. Introduction to the gradient, divergence, and curl operators. The current density vector and the continuity equation.						4	
	Dielectrics: the concept of free and bound charges, polarization, introduction to the electric displacement and polarization vectors, dielectric constant, and electric susceptibility. Gauss's law in presence of dielectrics, Clausius-Mossotti equation.						6	
	Magnetism: The Langevin theory of Diamagnetism and Paramagnetism: deriving the magnetic susceptibility and Curie's law. An introduction to the Weiss theory of paramagnetism and ferromagnetism.						5	
<b>List of Textbooks/Reference books</b>								
1	Fundamentals of Physics - Halliday, Resnick, Walker - 6 <sup>th</sup> Edition - John Wiley							
2	Sears and Zeemansky's University Physics - Young and Freedman - 12 <sup>th</sup> Edition - Pearson Education							
3	A Textbook of Engineering Physics - M N Avadhanulu, P G Kshirsagar, TVS Arun Murthy - 11 <sup>th</sup> Edition - S. Chand Publishers							
4	Solid State Physics - S. O. Pillai - 10 <sup>th</sup> Edition - New Age Publishers							
5	Solid State Physics - A. J. Dekker - MacMillan India							
6	Engineering Physics - V Rajendran - 6 <sup>th</sup> Edition - McGraw Hill Publishers							

7	Electricity and Magnetism - Edward Purcell and David Morin - 3 <sup>rd</sup> Edition - Cambridge University Press
8	Electricity And Magnetism - R. Murugesan - 3 <sup>rd</sup> Edition - S Chand Publishers
9	Introduction to Electrodynamics - David Griffiths - 3 <sup>rd</sup> Edition – Pearson Education

	<b>Course Code: PHP3151</b>	<b>Course Title: Applied Physics Laboratory</b>	<b>Credits = 2</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: I</b>	<b>Total contact hours: 30</b>	-	-	4
<b>Course Outcomes (students will be able to...)</b>					
1	Independently set up, handle, and use basic setups to measure and obtain various physical quantities.				
2	Use basic instruments like vernier-caliper, screw-gauge, travelling microscope, thermometer, etc. to make accurate measurements.				
3	Correlate and use directly measured quantities to obtain the relevant parameters through appropriate formulae, calculations, and/or graphical plotting, thereby understand the measurement principle involved in the experimental setups.				
4	Preliminarily treat the obtained datasets statistically to obtain errors in the experiments.				
<b>List of Prerequisite Courses</b>					
1	Standard XI and XII Physics course				
2	Applied Physics (theory) in tandem				
<b>Description of relevance of this course in the B. Chem.Tech. Program</b>					
The hands-on experience gained by the students in the Applied Physics laboratory course will equip them with basic experimental skills related to measurement of various important physical quantities. These skills will act as a useful foundation for other laboratory and theory courses in their area of specialization.					
<b>Course Contents (List of Experiments)</b>					
	Determination of Co-efficient of Viscosity by Poiseuille's method				
	Thermistor characteristics: Determination of Bandgap of a semiconductor				
	Determination of compressibility of liquids using an Ultrasonic Interferometer				
	Measurement of thermal conductivity of a solid: Lee's disc method				
	Photoelectric effect: Determination of h/e				
	Hall effect-I (sample current variation) Determination of carrier type and concentration in a semiconductor				
	Hall effect-II (magnetic field variation) Determination of carrier type and concentration in a semiconductor				
	Newton's rings: Determination of wavelength of light				
	Laser Diffraction: Determination of particle size				
	Studying variation of compressibility of liquid as function of temperature				
	Estimating resistivity of semiconductor using four probe method				
	Determination of magnetic susceptibility of paramagnetic liquid using Quincke's method				
<b>List of Textbooks/Reference books</b>					
1	Fundamentals of Physics - Halliday, Resnick, Walker - 6 <sup>th</sup> Edition - John Wiley				
2	Sears and Zeemansky's University Physics - Young and Freedman - Pearson Education				
4	Engineering Physics - V Rajendran - 6 <sup>th</sup> Edition - McGraw Hill Publishers				
5	Concepts of Modern Physics - A. Beiser, McGraw-Hill.				
6	Ultrasonics: Methods and Applications - J. Blitz, Butterworth.				
7	Optics - Ajoy Ghatak - 7 <sup>th</sup> Edition - McGraw Hill				
8	Fundamentals of Optics - F. Jenkins and H. White - 4 <sup>th</sup> Edition McGraw Hill				
9	ICT Physics Laboratory Manual (supplied to students)

<b>Description of relevance of this course in the Int. M. Tech. Program</b>				
<p>This subject will help students to understand use of basics of Applied Mechanics and Strength of Materials. In engineering equipments and structures, which different types of forces are to be considered and how to quantify them? What are different conditions of equilibrium? How to apply equilibrium condition to analyse the problems? Importance of centre of gravity and moment of Inertia in Engineering Design. Advantages and disadvantages of various geometric sections available for engineering design. Study of different types of stresses and strains occurring in various components of the structure. Understanding and calculating Shear force and Bending moment in the beams with simple and complex loading. Determination of Bending stresses and shear stresses in the beams. Evaluation of slopes and deflections in the beams with simple and complex loading. This is the foundation course for a good Design Engineer.</p>				
	<b>Course Contents (Topics and subtopics)</b>	<b>Reqd. hours</b>		
1	Concepts of forces, their types, Resolution of forces, Composition of forces, Steps in Engineering Design, Different types supports and free body diagram.	3		
2	Equilibrium of rigid bodies - Conditions of equilibrium. Determinant and indeterminate structures. Equilibrium of beams, trusses and frames problems on analysis of beams and truss.	5		
3	Concept of moment of Inertia (Second moment of area) its use. Parallel axis theorem. Problems of finding centroid and moment of Inertia of single figures, composite figures. Perpendicular axis theorem, Polar M.I., Radius of gyration.	4		
4	Shear Force and Bending Moment - Basic concept, S.F. and B.M. diagram for cantilever, simply supported beams (with or without overhang). Problems with concentrated and U.D. loads.	5		
5	Stresses and Strains - Tensile and compressive stresses, strains, modulus of elasticity, modulus of rigidity, bulk modulus. Relation between elastic constants. Lateral strain, Poisson's ratio, volumetric strain. Thermal stresses and strains. Problems based on stresses and strains. Stresses and Strains Relationship and Strain Deformation relationship.	4		
6	Theory of Bending - Assumptions in derivation of basic equation, Basic equation, section modulus, bending stress distribution. Advantages of various geometric sections from bending consideration.	3		
7	Problems on shear stress - Concept, Derivation of basic formula. Shear stress distribution for standard shapes. Problems of Shear stress distribution. Conditions under which shear stress is the governing criteria of design.	3		
8	Slope and Deflection of beams - Basic concept, Slope and Deflection of cantilever and simply supported beams under standard loading. Macaulay's method. Simple problems of finding slopes and deflections.	3		
<b>List of Text Books/ Reference Books</b>				
	Engineering Mechanics Vol I Statics by B. N. Thadani, Publisher Wenall Book Corporation			
	Introduction to Mechanics of Solids by Egor Popov, Prentice Hall of India Pvt. Ltd			
	Mechanics of Materials by Ferdinand Beer and E. Russel Johnston, Tata McGraw Hill Publishing Co. Ltd.			
	Fundamentals of applied Mechanics by Dadhe, Jamdar and Walavalkar, Sarita Prakashan Pune			
	Engineering Mechanics by S. Timoshenko and D. H. Young, McGraw Hill Publications			
	Strength of Materials by Ferdinand Singer and Andrew Pytel, Harper Colins Publishers			
<b>Course Outcomes (students will be able to.....)</b>				

1	Understand the use of basic concepts of Resolution and composition of forces.	CO 1
2	Analysis of the beams, truss or any engineering component by applying conditions of equilibrium.	CO 2
3	Understand the advantages and disadvantages of various geometric sections used in engineering design.	CO 3
4	Understand the different stresses and strains occurring in components of structure various standard loadings and in case of any complicated loading.	CO 4
5	Determination of shear stress, bending stresses in the beams with simple and complex loading.	CO 5
6	Understand how to calculate the deformations such as axial, normal deflections under different loading conditions.	CO 6

<b>Description of relevance of this course in the Int. M. Tech. Program</b>				
A student of Chemical Engineering is required to know the various processes and the equipment used to carry out the processes. Some of the elementary processes like filtration, size reduction, evaporation, condensation, crystallization etc., are very common to all engineers and technologists. These and many other processes require machines and equipment. One should be familiar with the design, manufacturing, working, maintenance of such machines and equipment. The subject of "drawing" is a medium through which, one can learn all such matter, because the "drawings" are used to represent objects and processes on the paper. Through the drawings, a lot of accurate information is conveyed which will not be practicable through a spoken word or a written text. Drawing is a language used by engineers and technologists. This course is required in many subjects as well as later on in the professional career.				
<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	<b>Orthographic projections:</b> Basics of Engineering drawing, Different lines in the drawing and their applications, Methods of projection, Different planes of projection, first and third angle of projections of drawing, four quadrants and concept of orthographic projections.	12		
2	<b>Sectional views and Missing views:</b> Need for the drawing sectional views, concept of sectioning and section lines, sectional drawings of different solids and machine components, auxiliary planes and views. Concept of recognizing missing views and their interpretation, drawing of missing views from given orthographic drawings.	08		
3	<b>Projections, Sections, Development of surfaces and Interpenetration of solids:</b> Introduction to basic shapes of Solids, Projections of Solids in different planes as per the given conditions, Sectional planes for cutting solids and respective drawings, Concept of surface development of respective solids, Development of surfaces of cylinders, prisms, pyramids, cones etc. Interpenetration of two or more solids and their respective drawings	12		
4	<b>Introduction to Computer Aided Drafting (CAD):</b> Basic introduction to CAD softwares, 2D and 3D drawings, drawing modification and dimensioning, different components of an engineering drawing in the industry.	08		
5	<b>Isometric projections using CAD:</b> Concept of isometric views, isometric projections and isometric scale, Iso metric projections of different solids and machine components using CAD softwares.	08		
6	<b>Assembly drawing using CAD:</b> Basics of Assembly drawing, preparation of 3d components and assembling on CAD softwares, labelling and table creation for bill of materials	12		
<b>List of Textbooks/ Reference Books</b>				
	1.Engineering Drawing by N.D.Bhat			
	2. Engineering Drawing by N.H.Dubey			
	3. CAD/CAM : Theory and Practice by Ibrahim Zeid and R Sivasubramanian			
<b>Course Outcomes (students will be able to.....)</b>				
1	Read Drawing			
2	Can understand different views.			
3	Can draw 3d drawing on a CAD software			

	<b>Course Code: HUP3151</b>	<b>Course Title:</b> <b>COMMUNICATION SKILLS - ENGLISH</b>	<b>Credits = 2</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: I</b>	<b>Total contact hours:30</b>	<b>0</b>	<b>-</b>	<b>4</b>
<b>Course Outcomes (students will be able to.....)</b>					
1	Student would be able to illustrate the 5 step communication process				
2	Student would be able to explain the end goal of communication				
3	Student would be able to explain barriers to clear communication				
4	Student would be able to articulate the role of visual communication within society, and implement the creative process to express himself/herself.				
5	Student would be able to identify the most relevant textbooks, reviews, papers and journals				
<b>List of Prerequisite Courses</b>					
	BASIC ENGLISH LANGUAGE OF THE XII GRADE LEVEL				
<b>Course Contents (Topics and subtopics)</b>					
			<b>Reqd. hours</b>		
1	Communication as a way of life Process of communication and its elements Functions of communication and importance in future careers Essentials of good communication				6
2	The communication cycle The 5-step communication cycle: Idea formation Message encoding Message transmission Decoding Feedback				4
3	Factors affecting effective communication. Planning for effective communication Modes of communication				3
4	Nonverbal communication Gestures Facial expressions Posture and movement Paralinguistics Eye contact Image management				4
5	Presentation skills What makes good presentation? Presenting the message Presenting oneself Visual Communication				8
6	Introduction to research study Introduction to databases Introduction to citation and referencing styles. How to conduct literature review Preparation of a report based on literature review				5
<b>List of Text Books</b>					
	THE SCIENCE OF EFFECTIVE COMMUNICATION: Improve Your Social Skills and Small Talk, Develop Charisma and Learn How to Talk to Anyone- Ian Tuhovsky				
	The Quick and Easy Way to Effective Speaking- Dale Carnegie				
<b>List of Additional Reading Material / Reference Books</b>

<b>Course Code: CHT3152</b>		<b>Course Title: Applied Chemistry-II</b>		<b>Credits = 2</b>		
<b>Semester: II</b>		<b>Total contact hours: 30</b>		<b>L</b>	<b>T</b>	<b>P</b>
2		0		0		
<b>Course Outcomes (students will be able to.....)</b>						
1	Understand reactions and structure activity relationship in organic molecules.					
2	Write simple mechanisms of aromatic reactions.					
3	Describe the fundamental concepts related to name reactions, organometallics, Metal-ligand bonding and types of ligands					
4	Role of Wilkinsons, Grignard Reagent in chemical reactions					
5						
<b>List of Prerequisite Courses</b>						
	Standard XII Chemistry					
<b>Course Contents (Topics and subtopics)</b>						
						<b>Reqd. hours</b>
<b>1</b>	<b>Structure activity relationship in organic molecules:</b> Use of bond length and bond energies to explain the reactivity of functional groups. Acidity & basicity values for organic molecules such as alkynes, alcohols, acids, ketones, amines.					<b>4</b>
<b>2</b>	<b>Aromatic electrophilic substitution:</b> Activating and deactivating functional groups on aromatic compounds, resonating structures, reactions such as Halogenation, Nitration, Friedel Crafts alkylation and acylation, sulfonation, Diazotization and important reacts of arene diazonium salts. Dyes – Chromophore and auxochrome concept, Azo dyes					<b>10</b>
<b>3</b>	<b>Aromatic compounds:</b> Problems associated with SNAr reactions and how to overcome them. Mechanism for aromatic nucleophilic substitutions.					<b>4</b>
<b>4</b>	<b>Organometallics:</b> Metal-ligand bonding, Concepts of sigma and pi bond formation. Types of ligands, CO and PPh <sub>3</sub> ligands.					<b>6</b>
<b>5</b>	<b>Basic reactions of organometallic compounds:</b> insertion, migration, oxidative addition, reductive elimination. E.g. Wilkinsons, Grignard Reagent etc.					<b>6</b>
						<b>30</b>
<b>List of Text Books</b>						
	1. Organic chemistry – T. W. G Solomons, C. B. Fryhle, John Wiley and Sons					
	2. Organic chemistry, Clayden, Greeves, Warren, Oxford publication					
	3. Organic Chemistry, Paula Y. Bruice, Pearson Education					
	4. The Organometallic Chemistry of the Transition Metals by Robert H. Crabtree					
	5. March's Advanced Organic Chemistry: Reactions, Mechanisms, and Structure 7 Edition (English, Paperback, Michael B. Smith)					
	6. Basic Inorganic Chemistry, F.A. Cotton and G. Wilkinson, John Wiley and Sons					
<b>List of Additional Reading Material / Reference Books</b>

			<b>4</b>	<b>0</b>	<b>0</b>
<b>List of Prerequisite Courses</b>					
HSC Standard Mathematics, Applied Mathematics – I (MAT XXXX)					
<b>List of Courses where this course will be prerequisite</b>					
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
This is a basic Mathematics course. This knowledge will be required in almost all subjects later on. This knowledge is also required for solving various mathematical equations that need to be solved in several chemical engineering courses such as MEBC, momentum transfer, reaction engineering, separation processes, thermodynamics, etc.					
<b>Course Contents (Topics and subtopics)</b>					<b>Hours</b>
1	<b>Probability Theory and Sampling Distribution:</b> Review of probability, Random variables and cumulative distribution function; probability mass function and probability density function; Some common univariate distributions: Binomial, Poisson, Geometric and Uniform, exponential, Normal, Gamma, beta etc; Expectation and Moments (central and raw moments); Generating functions: moment generating function and characteristic function; Multiple random variables and Joint distribution; marginal distributions, independence; Covariance and Correlation; method of least squares and simple linear regression; nonlinear regression				15
2	<b>Partial Differential Equations:</b> Introduction to Partial Differential Equations (PDE), Classification of higher order PDEs, Solution of PDEs using separation of variable techniques				10
3	<b>Numerical Solution of System of Linear Equations:</b> Solutions of system of linear equations (Gauss-elimination, LU-decomposition etc.), Numerical solution set of linear algebraic equations: Jacobi, Gauss Siedel, and under / over relaxation method				5
4	<b>Numerical Roots:</b> Numerical methods for solving non-linear algebraic / transcendental etc.: Newton's method, Secant and Regula Falsi				6
5	<b>Interpolations:</b> Interpolation and extrapolation for equal and non-equal spaced data (Newtons Forward, Newtons backward and Lagrange), Numerical integration (trapezoidal rule, Simpson's Rule)				6
6	<b>Numerical Solution IVP:</b> Numerical methods for solution of first and higher order ODEs (initial values and boundary value problems) using single step methods (RK, Euler's explicit and implicit methods), multi-step methods (predictor – corrector methods etc.)				8
7	<b>Numerical Solutions of BVP and PDE:</b> Finite difference methods: Forward difference, Backward difference, and Central differences application of finite difference methods to Boundary value problem in ODE and PDE (parabolic, elliptic and hyperbolic)				10
<b>List of Textbooks / Reference Books</b>					
1	A First Course in Probability, Sheldon Ross, Pearson Prentice Hall, 9 <sup>th</sup> Edition (2018)				
2	W.W. Hines, D. C. Montgomery, D.M. Goldsman, John-Wiely, Probability and Statistics in Engineering, John Wiley & Sons (2008)

11	Mark E. Davis, Numerical Methods and Modelling for Chemical Engineers, Dover				

	Publications (2003)	
12	Sandip Mazumder, Numerical Methods for Partial Differential Equations (2015), Elsevier	
<b>Course Outcomes (students will be able to....)</b>		
CO1	Understand the concepts of various probability distributions and apply them to analyze various engineering problems and make inference about the system	K2, K3, K4
CO2	Understand the method of linear and nonlinear least squares method and apply it to choose appropriate mathematical functions for modelling real data sets, arising from chemical engineering applications	K2, K3, K4,
CO3	classify higher of partial differential equation and solve parabolic equation using separation of variables.	K1, K2, K3
CO4	Understand the principles of various numerical approximation techniques and apply them to solve system of linear equations and nonlinear algebraic equations	K3, K4
CO5	Approximate appropriate mathematical functions from equal an unequally spaced data and perform integration using various numerical methods	K2, K3, K4
CO6	Choose appropriate numerical techniques to solve initial and boundary value problems on ordinary and partial differential equations arising from various chemical engineering applications	K3, K4, K5
K1 – Remembering, K2 – Understanding, K3 – Applying, K4 – Analyzing, K5 – Evaluating, K6 – Creating		

<b>Course code:</b>	<b>EST3153</b>
<b>Course title</b>	<b>Electrical Engineering and Basic Electronics</b>
<b>Scheme and Credits</b>	<b>2 L: 0 T: 0 P</b> <span style="float: right;"><b>2 Credits</b></span>
<b>Pre-requisites</b>	XIIth Standard Physics and Mathematics courses, Applied Physics - II
<b>Objectives of the course</b>	Students will get an insight to the importance of Electrical Energy in Chemical Plants. The students will understand the basics of electricity, changing the voltage levels to match with the appliances through transformers. Student will acquire the knowledge on the number systems and different logic gates with the fundamentals of digital electronics. They will get basic knowledge as regards to thyristor application in industries.

<b>Detailed contents</b>		<b>L</b>	<b>T</b>	<b>P</b>
<b>1</b>	DC Circuits: Circuit Components, Ohm's Law - Kirchhoff's Laws –Independent and Dependent Sources – Voltage divider rule and Current divider rule - Nodal Analysis, Mesh analysis with Independent sources.	<b>7</b>	<b>0</b>	<b>0</b>
<b>2</b>	AC Circuits: Average value, RMS Value, form factor and peak factor. A.C. through resistance, inductance and capacitance. Instantaneous power, real power, reactive power and apparent power, power factor.	<b>7</b>	<b>0</b>	<b>0</b>
<b>3</b>	Single Phase Transformers: Necessity of transformer, Principle of operation, Types and construction of transformers, EMF equation, losses, definition of regulation and efficiency.	<b>6</b>	<b>0</b>	<b>0</b>
<b>4</b>	Digital Electronics: Number system and codes: Binary, octal, hexadecimal and decimal Number systems and their inter conversion. Basic Logic gates (AND, OR, NOT, NAND, NOR, Ex-OR, Ex-NOR and their truth tables).	<b>6</b>	<b>0</b>	<b>0</b>
<b>5</b>	Power Electronics devices-Thyristor: Construction and Static I-V characteristics of Thyristors, Applications.	<b>4</b>	<b>0</b>	<b>0</b>

#### Suggested books

<b>1</b>	Edward Hughe “Electrical and Electronic Technology”, 10th Edition, Pearson Education Asia, 2019.
<b>2</b>	Kothari DP and I.J Nagrath, “Basic Electrical and Electronics Engineering”, Second Edition, McGraw Hill Education, 2020
<b>3</b>	Chapman, “Electric Machinery Fundamentals”, McGraw-Hill Higher Education.
<b>4</b>	William H. Gothmann, “Digital Electronics”, second edition, PHI publishers.
<b>5</b>	M.D. Singh, K B Khanchandani, ‘Power Electronics’, second edition, TATA McGraw Hill.

#### Reference books

<b>1</b>	Electronic devices and circuits by Boylestad, Nashelsky
<b>2</b>	Principles of Electronics by V.K.Mehta and Rohit Mehta
<b>3</b>	Electrical Technology by B.L.Theraja, A.K.Theraja Vol I,II,IV
<b>4</b>	A.Anand Kumar, “Fundamentals of Digital Circuits”, fourth edition, PHI publishers.
<b>5</b>	Power Electronics by P.S. Bhimbra.

#### Outcomes: Students will be able to

<b>CO1</b>	Understand the concepts of D.C circuits and AC circuits.
<b>CO2</b>	Apply the electrical circuit concepts to Solve the basic electrical circuits.
<b>CO3</b>	Understand the transformer working principle and its basic concepts.

<b>CO4</b>	Understand the concept of number systems and logic gates in digital electronics.
<b>CO5</b>	Apply the power electronics devices for industrial applications.

XIIth Standard Mathematics and Physics courses, Applied Physics I, Electrical Engg and Electronics				
<b>List of Courses where this course will be prerequisite</b>				
Chemical Process Control				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>				
Students will get an insight to the importance of Electrical Energy in Chemical Plants. The students will understand the basics of electricity, selection of different types of drives for a given application process. They will get basic knowledge as regards to Power supplies, instrumentation amplifiers and thyristor application in industries.				
<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
<b>Electrical Engineering Experiments</b>				
To verify KCL and KVL				
To verify Thevenin's theorem.				
To verify Superposition theorem				
To measure three phase power by using two wattmeter method				
Study of RLC circuits				
Load test on transformer				
Load test on induction motor				
Study of 3 phase circuits with Star connected load				
Study of 3 phase circuits with Delta connected load				
<b>Electronics Engineering Experiments</b>				
Study of C.R.O. and its applications.				
Measurement of Earth resistance				
Study of half wave, full wave and bridge rectifier circuits				
Study of input and output characteristics of a transistor.				
Study of operational amplifier circuits.				
Basic Logic Gates (NOT, OR, AND, NOR, NAND): Characteristics Trainer				
<b>List of Textbooks/ Reference Books</b>				
Electrical Engineering Fundamentals by Vincent Deltoro				
Electronic devices and circuits by Boylestad, Nashelsky				
Electrical Machines by Nagrath, Kothari				
Electrical Machines by P.S. Bhimbra				
Electrical Technology by B.L.Theraja, A.K.Theraja vol I,II,IV				
<b>Course Outcomes (students will be able to.....)</b>				
1	Understand the basic concepts of D.C., single phase and three phase AC supply and circuits Solve basic electrical circuit problems			
2	Understand the basic concepts of transformers and motors used as various industrial drives.			
3	Understand the basic concepts of electronic devices and their applications in power supplies, amplification and instrumentation			
4	Understand the basic concepts of Data acquisition, signal conditioning

<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
Students will be able to understand various equipment's like steam turbine, gas turbine, pumps, compressors, and power transmission system.					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Introduction to Thermodynamics, First and Second law of thermodynamics.				4
2	Properties of steam, T-S Diagram, Calculation of entropy, enthalpy, specific volume of steam, steam table, Dryness fraction,				4
3	Introduction to Steam Power Plant, Rankine cycle, Reheat cycle, Regenerative cycle, Back Pressure Turbine,				6
4	Steam Turbine, Classification, Calculation of Power Developed by Steam Turbine, Compounding of Steam Turbine				6
5	Boilers, Classification, Study of various Boilers such as Babcock & Wilcox Boiler, Cochran Boiler, La-Mount Boiler, Benson Boiler, Boiler Mountings and Accessories, Boiler Performance, Measurement of Steam Quality				6
6	Steam Nozzles, Different types of Steam Nozzles, Variation of area, velocity, and specific volume				2
7	Elements of Steam condenser, various types of steam condenser, Condenser Efficiency				4
8	Compressors, Classification of Compressors, Reciprocating Compressors, Single stage compressor and multistage compressor, P-V diagram, Application of Compressors, Rotary Compressors, Centrifugal and Axial compressors				4
9	Pumps, Classification of Pumps, Reciprocating Pumps, Centrifugal Pumps, Axial Pumps, Gear Pumps, Maintenance of Pumps				4
10	Refrigeration: COP of refrigerator and heat pumps, classification of refrigerants, Nomenclature, properties desired by refrigerants. Vapour compression refrigeration cycle. Methods of increasing COP of VCRS. Vapour absorption refrigeration systems.				6
11	Internal combustion engines: Thermodynamic cycles such as otto, diesel and dual cycles. Methods of increasing thermal efficiency and performance of internal combustion engines				4
12	Gas turbines: Constant pressure and constant volume gas turbines, open and closed cycle gas turbines. Methods of increasing thermal efficiency and specific work output of gas turbines.				4
13	Transmission of power: Introduction to various drives such as belt, rope, chain, and gear drives. Introduction to mechanical elements such as keys, couplings, and bearings in power transmission.				6
<b>List of Textbooks/ Reference Books</b>					
	<ol style="list-style-type: none"> <li>1. Thermodynamics by P.K. Nag</li> <li>2. Power plant by Morse</li> <li>3. Heat Engines by P.L. Balani</li> <li>4. Hydraulic Machines by Jagdish Lal</li> <li>5. Refrigeration and air conditioning by C.P. Arora</li> <li>6. Theory of Machines by Rattan. S.S</li> <li>7. Gas turbine theory by HiH Saravanamutoo.</li> </ol>				
<b>Course Outcomes (students will be able to....)</b>					
1	Understand first law and second law of thermodynamics with its implications. (K2)				
2	Describe the properties of steam and working of various steam boilers (K2)				
3	Explain the working principles of power developing systems such as steam turbines, gas turbines and internal combustion engines. (K2)				
4	Describe the working principle of vapour compression and vapour absorption refrigeration systems. (K2)				
5	Discuss different types of power transmission systems and their typical applications. (K2)				
6	Explain the working principles of power absorbing devices such as pumps and compressors. (K2)

					<b>Reqd. hours</b>
1	Introduction to Chemical Engineering: Chemical Process Industries, Chemistry to Chemical Engineering, Revision of Units and Dimensions				4
2	Mole concept, composition relationship and Stoichiometry, Behaviour of gases and vapors				6
3	Material balances for reacting and non-reacting chemical and biochemical systems including recycle, bypass and purge				20
4	Introduction to psychrometry humidity and air-conditioning calculations.				10
5	Introduction to Energy Balances, Energy Balances in systems with and without reactions				10
6	Unsteady State Material and Energy Balances				6
7	Material and Energy Balances for multistage processes and complete plants				4
<b>List of Text Books</b>					
1	Chemical Process Principles, Hougen O.A., Watson K. M.				
2	Basic Principles and Calculations in Chemical Engineering, Himmelblau,				
3	Stoichiometry, Bhatt B.I. and Vora S.M.				
<b>List of Additional Reading Material / Reference Books</b>					

<b>Course Code: ESP3154</b>		<b>Course Title: Engineering Applications of Digital Computers</b>		<b>Credits = 2</b>		
<b>Semester: II</b>		<b>Total contact hours: 60</b>		<b>L</b>	<b>T</b>	<b>P</b>
				<b>0</b>	<b>0</b>	<b>4</b>
<b>Course Outcomes (students will be able to.....)</b>						
1	Students would be able to carry out Spreadsheet calculations for chemical engineering problems					
2	Students would be able to develop programming logic and code it in software					
<b>List of Prerequisite Courses</b>						
	XIIth Standard Mathematics and Physics Courses, Applied Mathematics – I and II					
<b>Course Contents (Topics and subtopics)</b>						<b>Reqd. hours</b>
1	<u>Spreadsheet calculations:</u> Use of cells, formulas, table calculations, graphs, matrix operations, goal seek, solver, curve fitting, regression, statistical analysis, excel important formulas, visual basic programming					20
2	Any programming language (preferably python): Basics, array types, conditional statements, iterative loops, functions					20
3	Programming case studies involving solution of single non-linear equation (Equation of state such as Van der Waal, Peng Robinson, RKS, friction factor equation, Ergun equation, Estimation of Drag Coefficient etc)					6
4	Solution of ordinary differential equations (IVP and BVP)					8
5	Data visualization (2D plots, 3D plots, contours, surface plots)					6
<b>List of Text Books</b>						
	Microsoft Office help					
	Python: The Complete Reference, Martin Brown					
	Unit Operations of Chemical Engineering, McCabe, Smith and Harriott (for case studies)					
<b>List of Additional Reading Material / Reference Books</b>						

**Second Year  
Semester Three**

<b>Course Code: CET3251</b>		<b>Course Title: Fluid Flow</b>		<b>Credits = 2</b>		
<b>Semester: III</b>		<b>Total contact hours: 30</b>		<b>L</b>	<b>T</b>	<b>P</b>
				<b>1</b>	<b>1</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>						
1	Calculate pressure drop in pipelines and equipment for different situations such as single and two phase flow, fixed and fluidized beds					
2	Calculate forces on particles and terminal velocities of particles					
3	Design pumps and piping systems for simple situations					
<b>List of Prerequisite Courses</b>						
	XIIth Standard Physics and Mathematics, Applied Physics – I and II, Applied Mathematics – I and II					
<b>Course Contents (Topics and subtopics)</b>						
						<b>Reqd. hours</b>
1	Fluid Statics and applications to engineering importance.					4
2	Bernoulli's Equation and engineering applications, Pressure drop in pipes and Fittings, Piping systems					6
3	Utility network in chemical process industries: Cooling water, Steam, Chilled water, Thermic fluid system					8
4	Fluid moving machinery such as pumps, blowers, compressors, vacuum systems, etc.					6
5	Particle Dynamics, Boundary layer separation: skin and form drag, Flow through Fixed and Fluidised Beds, Flow through porous media					6
<b>List of Text Books</b>						
	Transport Phenomena, Bird R.B., Stewart W.E., Lightfoot E.N.					
	Fluid Mechanics, Kundu Pijush K.					
	Fluid Mechanics, F. W. White					
	Unit Operations of Chemical Engineering, McCabe, Smith and Harriott					
<b>List of Additional Reading Material / Reference Books</b>						

<b>Course Code: CET3252</b>	<b>Course Title: Heat Transfer</b>	<b>Credits = 2</b>		
		<b>L</b>	<b>T</b>	<b>P</b>
<b>Semester: III</b>	<b>Total contact hours: 30</b>	<b>1</b>	<b>1</b>	<b>0</b>
<b>List of Prerequisite Courses</b>				
Momentum and Mass transfer, Applied Mathematics I and II, Material and Energy Balance Calculations				
<b>List of Courses where this course will be prerequisite</b>				
Chemical Reaction engineering, Multiphase Reactor Engineering, Process Development and Engineering, Home Paper I and II, Env. Engg. and Process Safety, etc.				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>				
This is a basic course that deals with heat transfer, overview of heat exchangers Heat transfer forms one of the basic pillars of Chemical Engineering Education and is required in all future activities.				
	<b>Course Contents (Topics and subtopics)</b>	<b>Reqd. hours</b>		
1	Revision of Basics of Heat transfer: Steady state and unsteady state conduction, Fourier's law, Concepts of resistance to heat transfer and the heat transfer coefficient. Heat transfer in Cartesian, cylindrical and spherical coordinate systems, Insulation, critical radius.	6		
2	Convective heat transfer in laminar and turbulent boundary layers. Theories of heat transfer and analogy between momentum and heat transfer.	4		
3	Heat transfer by natural convection.	4		
4	Heat transfer in laminar and turbulent flow in circular pipes: Double pipe heat exchangers: Concurrent, counter-current and cross flows, mean temperature difference, NTU – epsilon method for exchanger evaluation. Heat transfer outside various geometries in forced convection, such as, single spheres, banks of tubes or cylinders, packed beds and fluidised beds	8		
5	Heat transfer in agitated vessels: coils, jackets, limpet coils, calculation of heat transfer coefficients, heating and cooling times, applications to batch reactors and batch processes	4		
6	Basics of Radiative heat transfer and application to Furnace Design	4		
<b>List of Text Books/ Reference Books</b>				
	Process Heat Transfer, Kern D.Q.			
	Heat Exchangers, Kakac S., Bergles A.E., Mayinger F			
	Process Heat Transfer, G. Hewitt			
<b>Course Outcomes (students will be able to.....)</b>				
1	Calculate temperature profiles in a slab at steady state			
2	Calculate heat transfer coefficients for free and forced convection in different heat transfer equipment			
3	Rate performance of heat exchanger using NTU-epsilon method			
4	Design agitated vessel for heat transfer controlled process			

	<b>Course Code: EST3155</b>	<b>Course Title: Engineering Thermodynamics</b>	<b>Credits = 2</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: III</b>	<b>Total contact hours: 30</b>	<b>1</b>	<b>1</b>	<b>0</b>
<b>List of Prerequisite Courses</b>					
	Mechanical Engineering Course (ESC) from first year syllabus				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
Thermodynamics sets hard limits on performance of processes and equipment. This course gives students the formalism and insights necessary to do a preliminary thermodynamic analysis of a process for the purpose of establishing feasibility assuming ideal mixing.					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Revision of basic Concepts of thermodynamics and 1 <sup>st</sup> Law of Thermodynamics to open processes Concept of Equilibrium: Entropy and Gibbs-Free Energy				2
2	Need for Entropy and Gibbs Energy, Exergy, Industrial Applications of Second Law of Thermodynamics using Ideal Gas Law and Thermodynamic Property Charts and Tables				4
3	Equations for Property Changes, Maxwell Relations and the need for Equations of State. Residual Properties, Industrial Applications using Equations of State				4
4	Phase Equilibria for Pure Fluids, Fugacity and Fugacity Coefficient				4
5	Thermodynamic Properties of Mixtures, Gibbs Duhem Equation				4
6	Phase Equilibrium in Mixtures, Fugacity and Fugacity Coefficient in Mixtures				4
7	Vapor – Liquid Equilibria in Ideal Mixtures, T-x-y and P-x-y diagrams, Bubble point and Dew point calculations for Ideal mixtures				4
8	Non-Ideal Mixtures, Excess Properties and activity coefficients				4
<b>List of Text Books/ Reference Books</b>					
	Introduction to Chemical Engineering Thermodynamics: Smith, van Ness, Abbott				
	Chemical, Biochemical and Engineering Thermodynamics: S. I. Sandler				
<b>Reference Books</b>					
	Properties of Gases and Liquids: Reid, Prausnitz, Pauling				
<b>Course Outcomes (students will be able to.....)</b>					
1	Calculate Enthalpy, Entropy and Gibbs energy changes in fluids with changes in temperature and pressure (K3)				
2	Analyse process efficiencies using entropy or exergy concepts (K4)				
3	Calculate saturation temperature and pressure relationship for pure fluids from equations of state (K3)				
4	Analyze vapor – liquid equilibria in ideal mixtures (K4)				

	<b>Course Code: CET3253</b>	<b>Course Title: Industrial Chemistry and Reaction Engineering</b>	<b>Credits = 4</b>		
	<b>Semester: III</b>	<b>Total contact hours: 60</b>	<b>L</b>	<b>T</b>	<b>P</b>
			<b>2</b>	<b>2</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>					
1	Design chemical reactors optimally, using minimum amount of data				
2	design experiments in a judicious way to get the required data, if not available				
3	Increase capacity and/or selectivity and/or safety by improving/changing the reactor type/sequence and/or operating conditions				
4	Draw process flow diagrams/process block diagrams for the manufacture of various chemicals from process description				
5	List out various alternatives for carrying out a particular process and provide recommendations for the best choice				
6	List Principles of combustion systems for solid, liquid and gaseous fuel				
<b>List of Prerequisite Courses</b>					
	Physical Chemistry, Material & Energy Balance Calculations, Applied Mathematics I and II, Momentum and Mass Transfer, Chem Engg Thermodynamics I and II				
<b>Course Contents (Topics and subtopics)</b>					
			<b>Reqd. hours</b>		
1	Raw material and energy sources, Organic and inorganic intermediates and final products, Bulk and specialty chemicals				10
2	Production costs of fuels and chemicals				2
3	Industrial gases and inorganic products				4
4	Examples of major industrial processes				6
5	Types of chemical reactions: elementary/non-elementary, single/multiple, irreversible/reversible				8
6	Types of chemical reactors: batch and semi-batch reactors, continuous reactors (CSTR and PFR)				8
7	Reaction kinetics (homogeneous reactions)				8
8	Isothermal, adiabatic and non-isothermal operation modes				8
9	Different types of single phase and multiphase reactors				6
<b>List of Text Books</b>					
1	Elements of Chemical Reaction Engineering – H. Scott FOGLER				
2	Chemical Reaction Engineering – Octave LEVENSPIEL				
3	The Engineering of Chemical Reactions – Lanny D. SCHMIDT				
4	An introduction to Chemical Engineering Kinetics and Reactor Design – Charles HILL				
5	Heterogeneous Reactions, Vol. I and II – L. K. Doraiswamy, M. M. Sharma				
6	Encyclopedia of Chemical Technology, Kirk-Othmer				
7	Ulmann's Encyclopedia of Industrial Chemistry				
8	Industrial Organic Chemistry, Weissrnel & Arpe				
9	Chemical Process Industries, Shreve B. Austin				
10	Chemical Process Technology, Moulijn, M. and van Dikken				
11	Dryden's Outlines of Chemical Technology				
12	Elements of Fuels, Furnaces and Refractories, O.P. Gupta				
13	Fuels handbook, Johnson				
<b>List of Additional Reading Material / Reference Books</b>					

	<b>Course Code: CEP3251</b>	<b>Course Title: Chemical Engineering Laboratory - I</b>	<b>Credits = 2</b>		
	<b>Semester: III</b>	<b>Total contact hours: 60</b>	<b>L</b>	<b>T</b>	<b>P</b>
			<b>0</b>	<b>0</b>	<b>4</b>
<b>Course Outcomes (students will be able to.....)</b>					
1	Student would be able to Learn to experimentally verify various theoretical principles				
2	Student would be able to Visualize practical implementation of basic chemical engineering principles				
3	Student would be able to Develop experimental skills				
4	Student would be able to Connect classroom teaching with the laboratory practicals				
5	Student would be able to Improve understanding about safety in the laboratory				
<b>List of Prerequisite Courses</b>					
	Introduction to Chemical Engineering, Material Balance and Energy Balance Calculations, Fluid Flow, Heat Transfer, Engineering Thermodynamics, Mathematics I, Mathematics II, Applied Physics, Applied Chemistry				
<b>Course Contents (Topics and subtopics)</b>					
					<b>Reqd. hours</b>
1	8-10 Experiments on Fluid Flow				40
2	2-3 Experiments on Heat Transfer				10
3	2-3 Experiments on Thermodynamics				10
<b>List of Text Books</b>					
1	McCabe W.L., Smith J.C., and Harriott P. Unit Operations in Chemical Engineering, 2014				
2	Bird R.B., Stewart W.E., and Lightfoot, E.N. Transport Phenomena, 2007				
3	Coulson J.M., Richardson J.F., and Sinnott, R.K. Coulson & Richardson's Chemical Engineering: Chemical engineering design, 1996.				
4	Green D. and Perry R. Perry's Chemical Engineers' Handbook, Eighth Edition, 2007.				
<b>List of Additional Reading Material / Reference Books</b>					

<b>Course Code: BST3151</b>		<b>Course Title: Introduction to Biological Sciences &amp; Bioengineering</b>			<b>Credits = 2</b>		
<b>Semester: III</b>		<b>Total contact hours: 30</b>			<b>L</b>	<b>T</b>	<b>P</b>
					<b>2</b>	<b>0</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>							
1	Describe the basic principles of cells and biomolecules						
2	Analyze the structure and function of protein						
3	Understand the central dogma of life and basic metabolic pathways						
4	To comprehend cell division and tissue organization						
5	To interpret basic genetics and cancer						
<b>List of Prerequisite Courses</b>							
	Standard XII Chemistry						
<b>Course Contents (Topics and subtopics)</b>							
							<b>Reqd. hours</b>
<b>1</b>	Introduction to cells, Microscopy and cell architecture, Chemical Components of the cell, An outline of some of the types of sugar, Fatty acids and other lipids, The 20 amino acids found in proteins, A survey of the nucleotides, The principal types of weak noncovalent bonds						<b>8</b>
<b>2</b>	Protein Structure and Function, A few examples of some general proteins, Making and using antibodies, Cell breakage and initial fractionation of cell extracts, Protein separation by chromatography, Protein analysis by electrophoresis						<b>4</b>
<b>3</b>	DNA and Chromosomes, DNA replication, repair and recombination, From DNA to Protein: How Cells Read the Genome, Control of Gene Expression						<b>6</b>
<b>4</b>	How Cell Obtain energy from food, Glycolysis, the complete citric acid cycle, Energy Generation in Mitochondria and Chloroplasts, Redox potentials						<b>4</b>
<b>5</b>	Cell division, Sex and Genetics						<b>4</b>
<b>6</b>	Bioengineering, tissues, stem cells and cancer						<b>4</b>
							<b>30</b>
<b>List of Text Books</b>							
	1. Bruce Alberts, Dennis Bray, Karen Hopkin, Alexander D. Johnson, Julian Lewis, Martin Raff, Keith Roberts, and Peter Walter. Essential Cell Biology, 2019						
	2. Becker's World of the Cell. Becker's World of the Cell, 2015						
	3. Eduardo D.P.De Robertis, E.M.P.De Robertis. Cell and Molecular Biology, 2017						
	4. Geoffrey Cooper, Robert E. Hausman. The Cell: A Molecular Approach, 1996						
<b>List of Additional Reading Material / Reference Books</b>							

<b>Course Code: HUT3156</b>		<b>Course Title:</b> <b>Basic Principles of Finance and Economics</b>		<b>Credits = 2</b>			
<b>Semester: III</b>		<b>Total contact hours: 30</b>		<b>L</b>	<b>T</b>	<b>P</b>	
				<b>2</b>	<b>0</b>	<b>0</b>	
<b>Course Outcomes (students will be able to.....)</b>							
1	Students will be able to know and apply accounting and finance theory.						
2	Students will be able to understand the mechanics of preparation of financial statements, their analysis and interpretation						
3	Students will be able to explain basic economic terms, concepts, and theories						
4	Students will be able to identify key macroeconomic indicators						
<b>List of Prerequisite Courses</b>							
<b>MATHS-1 AND MATHS -2 OF FIRST YEAR COURSEWORK</b>							
<b>List of Courses where this course will be prerequisite</b>							
<b>PROJECT ECONOMICS FUNDAMENTALS OF MARKETING MANAGEMENT AND MARKET RESEARCH</b>							
<b>Description of relevance of this course in the BACHELOR'S Program</b>							
<b>Course Contents (Topics and subtopics)</b>					<b>Reqd. hours</b>		
1	INTRODUCTION Explaining the Economy The Supply and Demand Model Using the Supply and Demand Model					3	
2	THE COMPETITIVE EQUILIBRIUM MODEL Deriving Demand Deriving Supply Market Equilibrium and Efficiency					5	
3	DEVIATIONS FROM COMPETITION Monopoly and Market Power Between Monopoly and Competition Antitrust Policy and Regulation					5	
4	MACRO FACTS AND MEASURES Getting Started with Macroeconomic Ideas Measuring Production, Income and Spending of Nations					5	
5	ACCOUNTING TRANSACTIONS Journal entries Debit credit rules Compound journal entry Journal and ledger Rules of posting entries Trial balance					5	
6	CAPITAL AND REVENUE Income and expenditure Expired costs and income Final accounts Manufacturing accounts Trading accounts Profit and Loss account Suspense account Balance sheet					5	
7	CONCEPT OF DEPRECIATION					2	
<b>List of Textbooks</b>							

	Finance and Accounting for Nonfinancial Managers: All the Basics You Need to Know -William G. Droms and Jay O. Wright Microeconomics: Basic Principles and Applications- A A Temu, D W Ndyetabula, et al <b>PRINCIPLES OF ECONOMICS(12e)- E. Case Karl, C. Fair Ray, et al</b>	
List of Additional Reading Material / Reference Books		
	Basic Finance for Nonfinancial Managers: A Guide to Finance and Accounting Principles for Nonfinancial Managers- Kendrick Fernandez Microeconomic Theory: Basic Principles and Extensions- Walter Nicholson and Christopher Snyder Macroeconomics(10e) Part of: Pearson Series in Economics (23 books) - by Froyen

			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: III</b>	<b>Total contact hours: 30</b>	<b>2</b>	<b>0</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>					
1	Describe the methods of industrial effluent treatment				
2	apply the learning for selection and implementation of appropriate waste management technique for sustainable development				
<b>List of Prerequisite Courses</b>					
<b>Course Contents (Topics and subtopics)</b>					
			<b>Reqd. hours</b>		
1	(a) Concept of circular economy, EHS management (b) Environment management systems in the chemical industry (c) Legal provisions for environmental management: EP Act 1986; Air Act, 1981; Water Act, 1974; Hazardous waste management Rules, 2019				6
2	Importance of ecology, effluent treatment and discharging norms for treated water				6
3	SPCB consent parameters, monitoring and analysis				4
4	External monitoring of ambient air, noise, stacks, etc				4
5	Air pollutants, sources and effects on human health and environment, monitoring and analysis				6
6	Life cycle analysis, environmental impact assessment				4
<b>List of Text Books</b>					
1	Introduction to Environmental Engineering and Science by Gilbert M Masters and Wendell P Ela				
2	Environmental Pollution Control Engineering, C. S. Rao				
3	Principles of Instrumental Analysis by D. A. Skoog, F. James Holler and S. R. Crouch, Cengage Learning, 2007				
<b>List of Additional Reading Material / Reference Books</b>					

**Second Year (Semester FOUR)**

	<b>Course Code: CET3254</b>	<b>Course Title: Chemical Engineering Operations</b>	<b>Credits = 4</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: IV</b>	<b>Total contact hours:60</b>	<b>2</b>	<b>2</b>	<b>0</b>
<b>List of Prerequisite Courses</b>					
	Material & Energy Balance Calculations, Physical Chemistry, Organic Chemistry-I and II, Chem. Eng. Thermodynamics-I, Momentum and Mass Transfer				
<b>List of Courses where this course will be prerequisite</b>					
	This is a basic Chem Engg. course. It is required in almost all the courses, such as, Separation Processes, Chemical Engineering Laboratory I, II and III, Process Simulation Lab – I and II, Home Paper I and II, etc.				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
This is a basic Chem Engg. course. The principles learnt in this course are required in almost all the courses and throughout the professional career of Chemical Engineer					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Introduction to Unit Operations and Chemical Engineering Processes, Introduction to mass transfer: Concepts of Convective and diffusive transport				4
2	Distillation of binary mixtures: Differential distillation, Flash or equilibrium distillation, Fractionating column and multistage column, reflux, reflux ratio, need for reflux, McCabe-Thiele, Lewis-Sorel methods of estimation of number of equilibrium stages, Operating and feed lines, minimum and optimum reflux ratio, Tray and column efficiency, Packed column distillation: rate based methods: HETP, HTU, Ponchon Savarit method, Introduction to batch distillation and steam distillation. Methods for multicomponent separations: Fenske-Underwood-Gilliland Method				12
3	Absorption and Stripping of dilute mixtures: Fundamentals of absorption, equilibrium curves, Operating lines from material balances, Number of equilibrium stages, Kremser Equation, Stage efficiency and column performance, Absorption columns, Rate based methods for packed columns (HTU, NTU), Design considerations: loading and flooding zones, pressure drop and column diameter				12
4	Liquid Filtration: Filtration theory: constant pressure, constant rate, and variable pressure-variable rate filtration, Incompressible and compressible cake filtration, Continuous filtration, filter aids, Filtration equipment, Selection, Sizing and Scale-up				10
5	Sedimentation, Classification and Centrifugal Separations: Design and scale up equations, Performance evaluation, Sedimentation equipment, classifiers, centrifugal equipment, Sieving operations, types of sieving (dry, wet, vibro), magnetic separators, and froth flotation, Selection, sizing and scale-up				8
6	Drying of solids: Mechanism of drying, drying rate curves, Estimation of drying time, Drying Equipment, operation, Process design of dryers, material and energy balances in direct dryers, Drying of bioproducts				10
7	Particle Size Reduction: Energy requirements for size reduction and scale-up considerations, Operational considerations, Crushing and grinding equipment: impact and roller mills, fluid energy mills, wet/dry media mills, Selection of equipment				4
<b>List of Text Books/ Reference Books</b>					
1	Richardson, J.F., Coulson, J.M., Harker, J.H., Backhurst, J.R., 2002. Chemical engineering: Particle technology and separation processes. Butterworth-Heinemann, Woburn, MA.				
2	Seader, J.D., Henley, E.J., 2005. Separation Process Principles, 2 ed. Wiley, Hoboken, N.J.				
3	Svarovsky, L., 2000. Solid-Liquid Separation. Butterworth-Heinemann, Woburn, MA.				
4	McCabe, W., Smith, J., Harriott, P., 2004. Unit Operations of Chemical Engineering, 7 ed. McGraw-Hill Science/Engineering/Math, Boston.				
5	Green, D., Perry, R., 2007. Perry's Chemical Engineers' Handbook, Eighth Edition, 8 ed. McGraw-Hill Professional, Edinburgh.				
6	Dutta, B.K., 2007. Principles of Mass Transfer and Separation Process. Prentice-Hall of India Pvt. Ltd, New Delhi.				
<b>Course Outcomes (students will be able to.....)</b>					
1	Know the significance and usage of different particulate characterization parameters, and equipment to estimate them				
2	Describe Size reduction energy requirements, estimate performance of equipment, selection and sizing of equipment				

3	Analyze filtration data and select systems based on requirements, estimate filtration area for given requirements, understand filter aids and their usage	
4	Draw T-y-x diagrams, and y-x diagrams, operating lines, feed line, bubble point, dew point calculations, ternary phase diagrams, partition coefficient	
5	Describe two common modes of drying, industrial drying equipment	
6	Calculate mass transfer coefficient in various equipment, Calculate height and diameter required, minimum solvent required in absorption, calculate height and diameter required, minimum reflux required in distillation	

	<b>Course Code: CET3255</b>	<b>Course Title: Process Safety</b>	<b>Credits = 2</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: IV</b>	<b>Total contact hours: 30</b>	<b>1</b>	<b>1</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>					
1	identify hazards in a given process and assess the same and provide solutions for operating safely.				
2	specify safety requirements for storage and handling of a given chemical.				
<b>List of Prerequisite Courses</b>					
<b>Course Contents (Topics and subtopics)</b>					
			<b>Reqd. hours</b>		
1	Safety management in chemical industry (a) Regulations in chemicals manufacturing units (b) Overview of hazards, contributors to chemical process accidents, importance of safety culture (c) Causes of fires and explosion, , accident prevention, work permits				10
2	Transport, storage and safe handling of hazardous chemicals (a) Flammable and combustible liquids (b) Storage and handling of hazardous chemicals (c) Norms for safe handling of chemicals at workplace (d) Safety during transportation of hazardous substances				10
3	Basics of laboratory safety (a) MSDS and personal protective equipment (b) Electrical safety (c) Fire safety (d) Machine safety (e) Cylinder safety (f) Bio safety				10
<b>List of Text Books</b>					
	Chemical Process Safety: Fundamentals with Applications – Daniel A. CROWL and Joseph F. LOUVAR				
	Guidelines for Process Safety Management, Environment, Safety, Health, and Quality – Center for the Chemical Process Safety of the American Institute of Chemical Engineers (AIChE)				
	Chemical Process Safety Learning from Case Histories – Roy E. SANDERS				
	Guidelines for Process Safety Documentation – Center for the Chemical Process Safety of the American Institute of Chemical Engineers (AIChE)				
<b>List of Additional Reading Material / Reference Books</b>					

<b>Course Code: CET3256</b>		<b>Course Title: Instrumentation and Process Dynamics</b>		<b>Credits = 2</b>		
<b>Semester: IV</b>		<b>Total contact hours: 30</b>		<b>L</b>	<b>T</b>	<b>P</b>
1		To identify appropriate instrument for measurement of process variables		1	1	
2		To estimate time variant nature of process				
3		To classify nature of the system as first order, second order, etc,				
4		To estimate response of the system when subjected to change				
5		To understand behavior of combined systems				
<b>Course Outcomes (students will be able to.....)</b>						
<b>List of Prerequisite Courses</b>						
		Maths-I: Laplace Transform to solve differential equations, Linear Algebra				
		Physics-I				
		Fluid Flow & Heat Transfer				
		General Chemistry				
<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>		
1	Instrumentation for measurement of temperature, flow, pressure, level, concentration. Basic underlying principles and physical construction of instruments,		6			
2	Precision, Sensitivity, accuracy and error analysis of measurements, Transduces, Transmission of signals, Drift		2			
3	Unsteady mass and energy balances of system, dynamic equations		2			
4	First and second order systems, Stimulus-Response Techniques, Response of First order systems to step, pulse, sinusoidal stimuli, characteristics of First and second order systems		6			
5	Combination of systems and their response to input changes, Open Loop response		2			
6	Overview of dynamic model equations of typical chemical engineering operations, such as level in a tank, temperature in a heated tank, CSTR, distillation column, Distributed parameter systems, packed column, Heat exchanger		6			
7	To design a simple control system of first order and second order nature, e.g. P, PI and PID		4			
8	Electronics for control systems: Distributed control system, Programmable Logic Controllers, SCADA, HMI		2			
<b>List of Text Books</b>						
		Instrumentation, Eckman				
		Chemical Process Control- George Stepheanopoulous				
<b>List of Additional Reading Material / Reference Books</b>						

	<b>Course Code: CEP3252</b>	<b>Course Title: Chemical Engineering Laboratory - II</b>	<b>Credits = 2</b>

<b>Course Outcomes (students will be able to.....)</b>					
1	Student would be able to gain knowledge about managing production processes.				
2	Student would be able to explain the importance, functions and productivity of the conversion process				
3	Student would be able to gain knowledge about various productivity techniques				
<b>List of Prerequisite Courses</b>					
	NONE				
<b>Course Contents (Topics and subtopics)</b>					
					<b>Reqd. hours</b>
1	The production function Operation concept of production Production as the conversion process Productivity of conversion process Components of production function-Planning, organising and controlling				6
2	Manufacturing systems Factors influencing choice of manufacturing system Classification of manufacturing systems Jobbing production Batch production Mass or flow production				8
3	Facilities location Factors governing plant location Economic survey of site selection Urban, sub-urban, rural site location				6
4	Productivity techniques Kaizen Kanban JIT 5S Poka yoke Six sigma				5
5	Gantt chart for production planning and control				5
<b>List of Text Books</b>					
	Modern Production / Operations Management, (8e)- Buffa and Sarin Operations Management,12e-Jay Heizer, Barry Render, et al.				
<b>List of Additional Reading Material / Reference Books</b>					
	OPERATIONS MANAGEMENT 13TH EDITION by William J. Stevenson  Operations and Supply Chain Management (SIE)   15th Edition by Richard B. Chase, Ravi Shankar, et al.				

**Third Year (Semester FIVE)**

<b>Course Code: CET3351</b>		<b>Course Title: Chemical Reaction Engineering</b>		<b>Credits = 2</b>		
				<b>L</b>	<b>T</b>	<b>P</b>
<b>Semester: V</b>		<b>Total contact hours: 30</b>		<b>1</b>	<b>1</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>						
1	design chemical reactors optimally, using minimum amount of data					
2	design experiments in a judicious way to get the required data, if not available					
3	fix some problems related to operability and productivity					
4	Select appropriate single and multiphase reactor configuration for given application					
<b>List of Prerequisite Courses</b>						
	Physical Chemistry, Material & Energy Balance Calculations, Applied Mathematics I and II, Momentum and Mass Transfer, Chem Engg Thermodynamics I and II					
	<b>Course Contents (Topics and subtopics)</b>					<b>Reqd. hours</b>
1	Sizing and analysis of chemical Reactors (single and multiple reactions (series/parallel))					6
2	Series of reactors, Recycle reactors, Use of energy balance in reactor sizing and analysis, Non-Isothermal reactor design					6
3	Non-idealities in chemical reactors: RTD, Axial dispersion models					6
4	Gas-Solid reactions: Catalytic and Non-catalytic					4
5	Heterogeneous catalysis: internal and external transport, kinetics and mechanisms					4
6	Gas-solid reactions (non-catalytic), Kinetics of fluid-fluid reactions					4
<b>List of Text Books</b>						
1	Elements of Chemical Reaction Engineering – H. Scott FOGLER					
2	Chemical Reaction Engineering – Octave LEVENSPIEL					
3	The Engineering of Chemical Reactions – Lanny D. SCHMIDT					
4	An introduction to Chemical Engineering Kinetics and Reactor Design – Charles HILL					
5	Heterogeneous Reactions, Vol. I and II – L. K. Doraiswamy, M. M. Sharma					
<b>List of Additional Reading Material / Reference Books</b>						

<b>Course Code: CET3352</b>		<b>Course Title: Momentum Transfer</b>		<b>Credits = 2</b>		
<b>Semester: V</b>		<b>Total contact hours: 30</b>		<b>L</b>	<b>T</b>	<b>P</b>
				<b>1</b>	<b>1</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>						
1	Calculate velocity profiles, forces, pressure drops for simple 1 –D laminar flow situations					
2	Calculate forces on particles and terminal velocities of particles					
3	Apply Momentum, Heat and mass transfer concepts to simple situations					
4	Select appropriate measurement technique for detailed characterization in chemical process equipment					
<b>List of Prerequisite Courses</b>						
	XIIth Standard Physics and Mathematics, Applied Physics – I and II, Applied Mathematics – I and II					
<b>Course Contents (Topics and subtopics)</b>						
				<b>Reqd. hours</b>		
1	Equations of Continuity and Motion (Cartesian, cylindrical, and spherical coordinates) in laminar flows and its applications for the calculation of velocity profiles, shear stresses, power, etc. in various engineering applications.					8
2	Boundary Layer Flows: Blasius equations and solution, Von-Karman integral equations and solutions,					6
3	Introduction to turbulence: Turbulent pipe flow, basis of Universal velocity profile and its use					6
4	Similarities in Momentum, Heat and Mass Transfer					6
5	Introduction to experimental and computational fluid dynamics: HFA, LDA, PIV, UVP, tomography etc, Turbulence modeling, multiphase system modeling etc					4
<b>List of Text Books</b>						
	Transport Phenomena, Bird R.B., Stewart W.E., Lightfoot E.N.					
	Fluid Mechanics, Kundu Pijush K.					
	Fluid Mechanics, F. W. White					
	Unit Operations of Chemical Engineering, McCabe, Smith					
<b>List of Additional Reading Material / Reference Books</b>						

	<b>Course Code: CET3353</b>	<b>Course Title: Chemical Engineering Thermodynamics</b>	<b>Credits = 4</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: V</b>	<b>Total contact hours:60</b>	3	1	0
<b>List of Prerequisite Courses</b>					
	Engineering Thermodynamics course in Second Year				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
This course builds on the preceding course by developing the concept of non-ideal mixing and provides students with the formalism and insights necessary to tackle real industrial problems like liquid-liquid phase splitting, azeotropy, non-zero heats of mixing, sparingly soluble gases and solids, electrolytes etc. Student who have taken this course may be expected to intelligently analyze practically the full spectrum of industrial chemical processes.					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Revision of Concepts of Ideal and non-ideal mixtures				4
2	Models of the Liquid Phase: Activity Coefficient Models (Redlich-Kister, Wilson et al, UNIQUAC and NRTL)				8
3	Vapor – liquid equilibria in non-ideal mixtures including azeotropes and high pressure vapor – liquid equilibria using gamma-phi and phi-phi approaches				8
4	Use of VLE data in design and analysis of distillation processes				4
5	Solubility of Gases in Liquids, concept of infinite dilution activity coefficient and Unsymmetric convention, Henry's law, Shair Prausnitz correlation				8
6	Liquid – Liquid Equilibria and Phase splitting, applications to extraction				8
7	Solubility of Solids in Liquids				4
8	Debye Huckel Theory, activity coefficients of electrolytes				4
9	Chemical Equilibrium in Ideal and non-ideal Mixtures in single phase reacting mixtures				6
10	Chemical Equilibrium in Ideal and non-ideal mixtures in Heterogenous reacting mixtures				6
<b>List of Text Books/ Reference Books</b>					
	Chemical, Biochemical and Engineering Thermodynamics: S. I. Sandler				
	Introduction to Chemical Engineering Thermodynamics: Smith, van Ness, Abbott				
<b>Reference Books</b>					
	Properties of Gases and Liquids: Reid, Prausnitz, Pauling				
<b>Course Outcomes (students will be able to.....)</b>					
1	Calculate Vapor – liquid equilibria in binary non-ideal mixtures using activity coefficient models (K2)				
2	Calculate solubility of solutes (gases and solids) in liquids (K2)				
3	Calculate liquid – liquid equilibria using activity coefficient models (K2)				
4	Analyze equilibria in reacting mixtures (K3)				

<b>Course Code: CEP3253</b>		<b>Course Title: Chemical Engineering Lab-III</b>		<b>Credits = 2</b>		
<b>Semester: V</b>		<b>Total contact hours: 60</b>		<b>L</b>	<b>T</b>	<b>P</b>
				<b>0</b>	<b>0</b>	<b>4</b>
<b>Course Outcomes (students will be able to.....)</b>						
1	Student would be able to Design and implement the experimental procedure with minimal assistance					
2	Student would be able to Connect various chemical engineering subjects for common output					
3	Student would be able to Analyze large experimental data and results					
4	Student would be able to Improve ability to write scientific reports					
5	Student would be able to Improve ability draw conclusions					
<b>List of Prerequisite Courses</b>						
	Material Balance and Energy Balance Calculations, Fluid Flow, Heat Transfer, Engineering Thermodynamics, Mathematics I and II, Industrial Chemistry and Reaction Engineering, Instrumentation and Process Dynamics, Chemical Reaction Engineering, Momentum Transfer, Chemical Engineering Thermodynamics					
<b>Course Contents (Topics and subtopics)</b>						
						<b>Reqd. hours</b>
1	4-6 Experiments on Momentum Transfer					18
2	2-3 Experiments on Chemical Engineering Thermodynamics					10
3	4-6 Experiments on Reaction Engineering					16
4	2-4 Experiments on Chemical Engineering Operations					10
5	1-2 Experiments on Instrumentation					6
<b>List of Text Books</b>						
1	McCabe W.L., Smith J.C., and Harriott P. Unit Operations in Chemical Engineering, 2014					
2	Bird R.B., Stewart W.E., and Lightfoot, E.N. Transport Phenomena, 2007					
3	Coulson J.M., Richardson J.F., and Sinnott, R.K. Coulson & Richardson's Chemical Engineering: Chemical engineering design, 1996.					
4	Green D. and Perry R. Perry's Chemical Engineers' Handbook, Eighth Edition, 2007.					
<b>List of Additional Reading Material / Reference Books</b>						

<b>Course Code: CEP3255</b>		<b>Course Title: Process Simulation Laboratory - I</b>		<b>Credits = 2</b>		
<b>Semester: V</b>		<b>Total contact hours: 60</b>		<b>L</b>	<b>T</b>	<b>P</b>
				<b>0</b>	<b>0</b>	<b>4</b>
<b>Course Outcomes (students will be able to.....)</b>						
1	Use advanced programming software with built in functions					
2	Write own functions/macros					
3	Solve chemical engineering problems using computers					
4	Design a distillation column using short-cut and rigorous method					
<b>List of Prerequisite Courses</b>						
	XIIth Standard Physics and Mathematics, Applied Physics – I and II, Applied Mathematics – I and II					
<b>Course Contents (Topics and subtopics)</b>						
						<b>Reqd. hours</b>
1	Introduction to object-oriented programming in python					8
2	Mathematical methods in chemical engineering such as simultaneous linear and nonlinear equations, interpolation, optimization					8
3	Design of chemical reactors: CSTR, PFR, multiple reactions, adiabatic, non-isothermal systems etc					8
4	Flash vessel calculations					4
5	Design of chemical engineering equipment					12
6	Process flow sheeting					4
7	Chemical process simulators such as Aspen, Coco simulators etc (mixing blocks, reactors, short cut and detailed design of separation equipment such as distillation, sizing of heat exchangers)					16
<b>List of Text Books</b>						
1	Coker, Ludwig's Applied Process Design for Chemical and Petrochemical Plants					
2	Perry's Chemical Engineering Handbook					
3	Albright's Chemical Engineering Handbook					
4	ASPEN manual					
<b>List of Additional Reading Material / Reference Books</b>						

**Third Year (Semester SIX)**

	<b>Course Code: CET3354</b>	<b>Course Title: Chemical Process Control</b>	<b>Credits = 2</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: VI</b>	<b>Total contact hours:30</b>	<b>1</b>	<b>1</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>					
1	To design a controller and understand behavior of a close loop controlled system				
2	To evaluate performance of a close loop control system, stability and controllability, Robustness				
3	To select and Design control strategy				
4	To evaluate a multivariable system, design multivariable controllers				
5	To evaluate plant-wide control systems				
<b>List of Prerequisite Courses</b>					
	Maths-I and Maths-II				
	Instrumentation and Process dynamics				
	Chemical Reaction Engineering				
	Transport Phenomena				
	Chemical Process safety				
<b>Course Contents (Topics and subtopics)</b>					<b>Reqd. hours</b>
1	Design of controllers using frequency response technique, Nyquist and Bode Stability criteria,				4
2	Control Strategies- Cascade control, Ratio Control, Feedforward control, Dead time compensation				4
3	Multivariable Systems, Identification of Interaction and selection of pairings, Design of controllers for multivariable systems, Decouplers,				4
4	Modern control strategies, Internal model control, Dynamic Matrix control				4
5	Design of control systems for CSTR, Distillation column, heat exchangers				6
6	Process Instrumentation diagrams, Safety alarms and interlocks				2
7	Control of batch processes, programmable logical controllers, Distributed control systems, supervisory Control systems				2
7	Digital control systems, Introduction to z-transforms				2
8	Flow-sheet modelling and Simulation of plant-wide control systems				2
<b>List of Text Books</b>					
	Chemical Process Control- George Stephenopoulos				
	Process control- Shinsky				
<b>List of Additional Reading Material / Reference Books</b>					

	<b>Course Code:</b>	<b>Course Title: Material Technology</b>	<b>Credits = 2</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: VI</b>	<b>Total contact hours: 30</b>	<b>2</b>	<b>0</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>					
1	Students will be able to read and interpret the Phase Diagrams				
2	Student would be able to select a proper MOC				
3	Student would be able to describe causes of mechanical failure and failure analysis				
4	Student would be able to analyse the corrosion problems in process industry and control the corrosion				
5	Student would be able to learn from incidences				
<b>List of Prerequisite Courses</b>					
	Structural Mechanics, Applied Physics I and II, physical chemistry				
<b>Course Contents (Topics and subtopics)</b>					
			<b>Reqd. hours</b>		
1	Engineering Materials: Classification, study of ferrous and nonferrous materials		2		
2	Phase diagrams of steel and the applications of phase diagrams		2		
3	Effect of structure on properties: subatomic to macroscopic level		4		
4	Modification and control of material properties		3		
5	Polymeric materials , Ceramic materials, Composite materials and Smart materials		3		
6	Corrosion Engineering: Electrochemical principles, different types of corrosion, Polarisation, mechanisms of corrosion control and prevention, preventive coatings. Corrosion behavior of important alloys such as stainless steels, brass etc.		8		
7	Theory of failure: Crystal defects, plastic deformation. Types of mechanical failure, fracture , fatigue and creep		6		
8	Criteria for selection of materials in chemical process industry		2		
9					
	<b>TOTAL</b>		<b>30</b>		
<b>List of Text Books</b>					
	The Essence of Materials for Engineers, Robert W. Messler, Jr.				
	Materials Science and Engineering, Raghavan V.				
	Materials Science and Engineering, Van Vlack L.H.				
<b>List of Additional Reading Material / Reference Books</b>					
	Metals handbook				
	Engineering Materials and Applications, Flin R.A., Trojan P.K.				

	<b>Course Code: CET3356</b>	<b>Course Title: Separation Processes</b>	<b>Credits = 3</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: VI</b>	<b>Total contact hours:45</b>	<b>2</b>	<b>1</b>	<b>0</b>
<b>List of Prerequisite Courses</b>					
	Material & Energy Balance Calculations, Chemical Engineering Operations – I, Chem. Eng. Thermodynamics-I and II, Momentum Transfer, Applied Mathematics I and II				
<b>List of Courses where this course will be prerequisite</b>					
	Chemical Engineering Laboratory, Process Simulation Lab – I and II, Home Paper I and II, Proc Dev and Engg.,				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
This is a course further built up on and in continuation with Chem. Engg. operations. It forms the basis of Chemical Engineering Principles and hence it is required in almost all the courses and throughout the professional career of a Chemical Engineer.					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Extraction and Leaching of ternary systems: Ternary diagrams, Hunter-Nash graphical method and Maloney–Schubert graphical equilibrium-stage method, Solvent Selection, Operating point, number of stages, maximum solvent to feed ratios, minimum reflux, minimum number of stages, Introduction to reactive extraction, aqueous two phase extraction, extraction of biomolecules, supercritical fluid extraction, Solid-liquid extraction: Solid - liquid equilibria, efficiency, performance evaluation, Equipment for extraction, leaching and their sizing, Design considerations				10
2	Adsorption and Ion exchange: Liquid Adsorption, Ion-Exchange Equilibria, Equilibria in Chromatography, Breakthrough Curves, Kinetic and transport considerations, Convection-Dispersion Model, Separation Efficiency (Plate Height or Bandwidth), Correlations for Transport-Rate Coefficients, Equipment for sorption operations, Scale-Up and Process Alternatives, Adsorptive Membranes, simulated-moving-bed operation, modes of operation				10
3	Crystallization: Theory of solubility and crystallization, phase diagram (temp/solubility relationship), Supersaturation, Nucleation, Crystal Growth, Population balance analysis, method of moments for rate expressions for, volume, area and length growth, CSD distribution, MSMPR operation, evaporative and cooling (rate expressions) , most dominant size, ideal classified bed, Precipitation, Melt crystallization, Process design of crystallizers and their operation				10
4	Humidification and Cooling Towers: Method of changing humidity and equipment, Cooling tower process design, counter-current, concurrent and cross current, mass and heat balances in bulk and interfaces, Estimation of air quality, performance evaluation of cooling towers.				5
5	Membrane Separations: Types of separations, reverse osmosis, ultrafiltration, gas separation, vapour permeation and pervaporation, dialysis, electrodialysis, nanofiltration, Transport Through Porous Membranes, Resistance Models, Liquid Diffusion Through Pores, Gas Diffusion Through Porous Membranes, Transport Through Nonporous Membranes, Solution-Diffusion for Liquid Mixtures, Gas Mixtures, Concentration Polarization and Fouling, Membrane modules, arrangement of modules in cascades, performance criteria and design considerations				10
<b>List of Text Books/ Reference Books</b>					
1	Richardson, J.F., Coulson, J.M., Harker, J.H., Backhurst, J.R., 2002. Chemical engineering: Particle technology and separation processes. Butterworth-Heinemann, Woburn, MA.				
2	Seader, J.D., Henley, E.J., 2005. Separation Process Principles, 2 ed. Wiley, Hoboken, N.J.				
3	McCabe, W., Smith, J., Harriott, P., 2004. Unit Operations of Chemical Engineering, 7 ed. McGraw-Hill Science/Engineering/Math, Boston.				
4	Green, D., Perry, R., 2007. Perry's Chemical Engineers' Handbook, Eighth Edition, 8 ed. McGraw-Hill Professional, Edinburgh.				
5	Dutta, B.K., 2007. Principles of Mass Transfer and Separation Process. Prentice-Hall of				

	India Pvt. Ltd, New Delhi.	
<b>Course Outcomes (students will be able to.....)</b>		
1	List situations where liquid–liquid extraction might be preferred to distillation, Make a preliminary selection of a solvent using group-interaction rules, Size simple extraction equipment	
2	Differentiate between chemisorption and physical adsorption, List steps involved in adsorption of a solute, and which steps may control the rate of adsorption, Explain the concept of breakthrough in fixed-bed adsorption	
3	Explain how crystals grow, Explain the importance of supersaturation in crystallization. Describe effects of mixing on supersaturation, mass transfer, growth, and scale-up of crystallization	
4	Explain membrane processes in terms of the membrane, feed, sweep, retentate, permeate, and solute-membrane interactions. Distinguish among microfiltration, ultrafiltration, nanofiltration, virus filtration, sterile filtration, filter-aid filtration, and reverse osmosis in terms of average pore size. Explain common idealized flow patterns in membrane modules.	

	<b>Course Code: CET3357</b>	<b>Course Title: Heat Transfer Equipment Design</b>	<b>Credits = 2</b>		
	<b>Semester: VI</b>	<b>Total contact hours: 30</b>	<b>L</b>	<b>T</b>	<b>P</b>
			<b>1</b>	<b>1</b>	<b>0</b>
<b>List of Prerequisite Courses</b>					
	Momentum and Mass transfer, Applied Mathematics I and II, Material and Energy Balance Calculations				
<b>List of Courses where this course will be prerequisite</b>					
	Chemical Reaction engineering, Multiphase Reactor Engineering, Process Development and Engineering, Home Paper I and II, Env. Engg. and Process Safety, etc.				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
This is a basic course that deals with heat transfer, heat exchangers and their design. Heat transfer forms one of the basic pillars of Chemical Engineering Education and is required in all future activities.					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Shell and tube heat exchangers: Basic construction and features, TEMA exchanger types, their nomenclature, choice of exchanger type, correction to mean temperature difference due to cross flow, multipass exchangers. Design methods for shell and tube heat exchangers such as Kern Method, Bell – Delaware method				8
2	Finned tube exchangers, air-cooled cross flow exchangers and their process design aspects				3
3	Compact Exchangers: Plate, Plate fin, Spiral, etc.: Construction, features, advantages, limitations and their process design aspects				3
4	Condensation of vapours: theoretical prediction of heat transfer coefficients, practical aspects, horizontal versus vertical condensation outside tubes, condensation inside tubes, Process Design aspects of total condensers, condensers with de-superheating and subcooling, condensers of multicomponent mixture, condensation of vapours in presence of non-condensables.				8
5	Heat transfer to boiling liquids: Process design aspects of evaporators, natural and forced circulation reboilers				8
<b>List of Text Books/ Reference Books</b>					
	Process Heat Transfer, Kern D.Q.				
	Heat Exchangers, Kakac S., Bergles A.E., Mayinger F				
	Process Heat Transfer, G. Hewitt				
<b>Course Outcomes (students will be able to.....)</b>					
1	Calculate heat duty/outlet temperatures/pressure drops/area required for various equipment like double pipe heat exchangers, shell and tube heat exchangers, plate heat exchangers, condensation, evaporation, agitated tanks.				
2	Identify and select type of shell and tube exchanger based on TEMA classification.				
3	Design a reboiler system for distillation				

	<b>Course Code: CEP3256</b>	<b>Course Title: Process Simulation Laboratory - II</b>	<b>Credits = 2</b>		
	<b>Semester: VI</b>	<b>Total contact hours: 60</b>	<b>L</b>	<b>T</b>	<b>P</b>
			<b>0</b>	<b>0</b>	<b>4</b>
<b>Course Outcomes (students will be able to.....)</b>					
1	Solve chemical engineering design problems involving iterative calculations				
2	Solve chemical engineering problems involving non-linear equations coupled with ODEs/PDEs				
3	Develop and optimize a process flow sheet for chemical production				
<b>List of Prerequisite Courses</b>					
	XIIth Standard Physics and Mathematics, Applied Physics – I and II, Applied Mathematics – I and II				
	<b>Course Contents (Topics and subtopics)</b>				
			<b>Reqd. hours</b>		
1	Detailed design of multicomponent distillation				
2	Detailed design of shell and tube heat exchanger				
3	Detailed design of multiphase reactor system such as hydrogenation etc				
4	Detailed design of continuous crystallizer (MSMPR)				
5	Modeling and simulation of transient systems (solution of partial differential equations)				
6	Detailed design of batch crystallizer				
7	Advanced process flow sheeting: mechanical vapor compression refrigeration, absorption refrigeration				
8	Data analytics: feature importance, bagging and boosting, hyper parameter optimization				
9	Uncertainty analysis				
<b>List of Text Books</b>					
1	Coker, Ludwig's Applied Process Design for Chemical and Petrochemical Plants				
2	Perry's Chemical Engineering Handbook

<b>List of Prerequisite Courses</b>					
	Material and Energy Balance Calculations, Equip Des and Dwg I, Energy Engineering, Ind Eng Chem.				
<b>List of Courses where this course will be prerequisite</b>					
	Home Paper I and II				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
This course is required for the future professional career					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Introduction to greenfield projects and global nature of projects; Impact of currency fluctuations on Project justification and cash flows and Concepts of "Quality by Design" including typical design deliverables and understanding constructability, operability and maintainability during all stages of project execution. Meaning of Project Engineering, various stages of project implementation				4
2	Relationship between price of a product and project cost and cost of production, EVA analysis. Elements of cost of production, monitoring of the same in a plant, Meaning of Administrative expenses, sales expenses etc. Introduction to various components of project cost and their estimation. Introduction to concept of Inflation, location index and their use in estimating plant and machinery cost. Various cost indices, Relationship between cost and capacity.				4
4	Project financing: debt: Equity ratio, Promoters' contribution, Shareholders' contribution, source of finance, time value of money. Concept of interest, time value of money, selection of various alternative equipment or system based on this concept. Indian norms, EMI calculations. Depreciation concept, Indian norms and their utility in estimate of working results of project. Working capital concept and its relevance to project.				4
5	Estimate of working results of proposed project. Capacity utilization, Gross profit, operating profit, profit before tax, Corporate tax, dividend, Net cash accruals. Project evaluation: Cumulative cash flow analysis Break-Even analysis, incremental analysis, various ratios analysis, Discounted cash flow analysis				4
6	Process Selection, Site Selection, Feasibility Report				4
7	Project: Conception to Commissioning: milestones, Project execution as conglomeration of technical and non technical activities, contractual details. Contract: Meaning, contents, Types of contract. Lump-sum Turnkey (LSTK), Eng, Procurement and Construction (EPC), Eng, Procurement and Construction Management (EPCM). Mergers and Acquisitions				4
8	Reading of Balance Sheets and evaluation of Techno-commercial Project Reports.				2
9	PERT, CPM, bar charts and network diagrams				4
<b>List of Text Books/ Reference Books</b>					
	Chemical Project Economics, Mahajani V. V. and Mokashi S M.				
	Plant Design and Economics for Chemical Engineers, Peters M.S., Timmerhaus K.D.				
	Process Plant and Equipment Cost Estimation, Kharbanda O.P.				
<b>Course Outcomes (students will be able to.....)</b>					
1	Calculate working capital requirement for a given project				
2	Calculate cost of equipment used in a plant total project cost				
3	Calculate cash flow from a given project				
4	Select a site for the project from given alternatives				
5	List out various milestones related to project concept to commissioning				

	<b>Course Code: CEP3371</b>	<b>Course Title: IPT (8 Weeks)</b>	<b>Credits = 4</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: VI</b>	<b>Total contact hours:</b>	<b>0</b>	<b>0</b>	<b>40</b>
<b>List of Prerequisite Courses</b>					
	All				
<b>List of Courses where this course will be prerequisite</b>					
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
This course enables students to integrate all the subjects that they have learnt and design plants / processes from Chemical Engineering Principles.					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1					
<b>List of Text Books/ Reference Books</b>					
<b>Course Outcomes (students will be able to.....)</b>					
1	Identify market requirement related to a particular chemical				
2	Draw a process block diagram from a given process description.				
3	Select a site for the project				
4	Develop a PFD based on block diagram				
5	Do material and energy for all the equipment in PFD.				

**Fourth Year (Seventh Semester)**

	<b>Course Code: CET3451</b>	<b>Course Title: Chemical Process Development and Engineering</b>	<b>Credits = 3</b>		
			<b>L</b>	<b>T</b>	<b>P</b>
	<b>Semester: VII</b>	<b>Total contact hours: 45</b>	<b>2</b>	<b>1</b>	<b>0</b>
<b>List of Prerequisite Courses</b>					
	All chemical Engineering subjects, Material Science and Engineering, Env Engg and Proc Safety				
<b>List of Courses where this course will be prerequisite</b>					
	Home Paper I and II				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
This course integrates all the chemical engineering and allied subjects for appropriate design of process plants, in selection of processes and evaluating alternatives					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Development of a preliminary Process System: Modular approach				2
2	Multiple process synthesis, selection of process, basic economic evaluation				2
3	Sequencing of operations and integration in processes				2
4	Batch vs continuous vs semi-batch processes- Scale up				3
5	Process Engineering aspects of low and medium volume chemicals including process development.				3
6	Concept of dedicated and multiproduct plant facilities, pilot plant, mini plants				3
7	Development and evaluation of alternative flow sheets				3
8	Scale up aspects; identification of controlling steps of process,				3
9	Green Engineering principles				6
10	Utilisation of energy; cost of utilities, heat exchange networks				3
11	Process intensification				3
12	Preparation of Conceptual process and instrumentation diagrams. .				3
13	Preparation of process specifications for typical equipment.				3
14	Safety and Risk of chemical processes				3
15	Learn from mistakes				3
<b>List of Text Books/ Reference Books</b>					
	Industrial Chemical Process Design, D. L. Erwine				
	Laboratory Chemical Process Development, Anderson N.				
	Organic Unit Processes, Groggins				
	Chemical Process Engineering: Design and Economics, Silla H.				
	Handbook of Chemical Process Development, Chandalia S. B.				
	Conceptual Chemical Plant Design, Douglas J. M.				
<b>Course Outcomes (students will be able to.....)</b>					
1	to select a strategy for a process from amongst the alternatives				
2	Determine strategy for carrying out a particular process				
3	Prepare specifications for a particular equipment				
4	Calculate utility requirements				

	<b>Course Code: CEP3451</b>	<b>Course Title: Chemical Process Equipment Design &amp; Drawing</b>	<b>Credits = 2</b>		
			<b>L</b>	<b>T</b>	<b>P</b>

<b>List of Prerequisite Courses</b>					
	Structural Mechanics, Materials Science and Engineering, Engineering Graphics I and II				
<b>List of Courses where this course will be prerequisite</b>					
	Home Paper I and II, Equipment Design & Drawing II, Chemical Project Engineering and Economics, Process Dev and Engineering				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
Knowledge of chemicals and chemical producing equipments and plants are essential for professional Chemical engineer and Technologist. This subject will help students to understand use of basics of applied science in the form of mechanics, strength of materials, selection of materials and suitable manufacturing techniques and the details of operating conditions of equipment and its design procedure. This will help Chemical engineer to understand process equipments and their design concept and section of proper equipments for the designed functions of the plants. It will help them to understand various design codes used for fabrication of these equipments and the various types of destructive and non destructive tests performed on equipments before and after assembly of equipment defining its capacity, reliability, and its life.					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Basic design concepts, use of standards and design stresses and factor of safety, selection of materials, working conditions, corrosion and its effects on equipments. Standard design codes				6
2	Design of pressure vessels: stresses acting on pressure vessels, operating conditions, selection of materials, pressure vessel codes, design stress and design criteria's, Design of Shell, Head, Nozzle, Flanged joints for heads and nozzles				6
3	Design of Storage vessels: Storage of various types of fluids and liquids in tanks, Loss mechanism of storage of volatile and non-volatile liquids and gases, Types of storage vessels, Vessels for storing of gases, method of storage of gases, Design of rectangular and cylindrical tank with components such as shell, bottom plate, self-supporting roof design, types of roofs,				6
4	Testing of process equipment, various				4
5	Mechanical Design of Reaction Vessels. a) Design of shells subjected to internal and external pressures. b) Types of Jackets /Coils used for heating and cooling in reaction vessels and their design. c) Type of agitators and their design. Design of agitator system components such as shafts,stuffing box etc.				14
7	Mechanical Design of Heat Exchangers a) Components of shell and tube type heat exchangers. b) Design of various components of heat exchangers such as Fixed tube sheet type,U tube, Floating head etc. Various codes for heat exchangers.				12
8	Mechanical design of distillation columns a) Various components of columns such as trays, packings, downcomers,bubble cap etc b) Design of shell for various stress conditions. Tray supports and their design				12
<b>List of Text Books/ Reference Books</b>					
	Process equipment Design By V V Mahajani, S. B. Umarji				
	Equipment Design by Dawande				
	Process equipment Design by Young				
	Welding Technology by O.P. Khanna, Welding Technoloy by Little				
<b>Course Outcomes (students will be able to.....)</b>					
1	Understand general design procedure for chemical process equipments. (K2)				
2	Design and draw pressure vessels and its parts subjected to internal pressure. (K6)				
3	Design and draw reactors and its parts subjected to internal and external pressure. (K6)				
4	Design and draw shell and tube type of heat exchangers. (K6)				

5	Design and draw tray columns and its parts. (K6)	
6	Understand different types of supports for chemical process equipments.(K2)	

<b>Course Code: CEP3452</b>		<b>Course Title: Literature Review (Research Methodology – I)</b>		<b>Credits = 2</b>		
<b>Semester: VII</b>		<b>Total contact hours: 45</b>		<b>L</b>	<b>T</b>	<b>P</b>
				<b>1</b>	<b>0</b>	<b>2</b>
<b>Course Outcomes (students will be able to.....)</b>						
1	Understand the basic concepts of research and the components therein, formally			K2		
2	Understand and appreciate the significance of statistics in Chemical Technology, Pharmacy and Chemical Engineering			K2		
3	Understand and apply importance of literature survey in research design			K3		
4	Understand an in-depth knowledge on the documentation in research			K2		
5	Evaluate importance of various parts of a research report/paper/thesis in presentation of research results			K4		
6	Prepare and Deliver a model research presentation			K5		
7	Understand the significance of various types of IPRs in research			K1		
8	Create a model research project			K6		
<b>List of Prerequisite Courses</b>

<b>List of Courses where this course will be prerequisite</b>						
1	NA					
<b>Description of relevance of this course in the Int. M. Tech. Program</b>						
The formal exposure to various elements of research methods such as problem formulation, literature search, planning of various activities, documentation, budgeting, purchase, report/thesis compilation, manuscript writing, patent drafting, is critical for polishing the naïve research attitude and aptitude in the PG students of the programme. The course is designed to formally introduce various concepts of research methodology in stepwise manner to the students						
<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>		
1	Introduction of Course Academic Honesty Practices General philosophy of science & Arguing About Knowledge Case studies in science history			3		
2	Motivation and Background Motivation/Demotivation for Research, Building Background for Research and How to read research papers			3		
3	Time Management (Academic and Non-academic time), Effort Management, Plan execution, Energy Management Issue, Role and expectation of research supervisor and student			4		
4	Finding and Solving Research Problems What is Research, How to start?, Approaches to find research problems and psychological experiments Literature survey, Textbooks, Review and research papers How to ask Questions What is worthwhile research problem, Analytical and synthetic research approach			4		
5	Finding and Solving Research Problems What is Research, How to start?, Approaches to find research problems and psychological experiments Literature survey, Textbooks, Review and research papers, critical review of research papers, how to write literature survey report, How to ask Questions, formulating research questions,			4		
6	What is worthwhile research problem, Analytical and synthetic research approaches How to solve research problems, designing work plan, importance of objectives, activity and strategizing research work. Design of timeline for work plan (Gantt Chart etc), Grant Writing Guidelines			4		
7	Experimental Research Inventory Management, Material Management Learning required skills for research, Documentation and lab notebook guidelines, Safety aspects in chemical/biological research			4		
8	Methods and Tools used in Research: Qualitative studies; Quantitative studies;			6		

	Simple data organization; Descriptive data analysis; Limitations and sources of error; Inquiries in form of Questionnaire, Opinionnaire or by interview; Statistical analysis of data including Variance, Standard deviation, Students 't' test and Analysis of variance (ANOVA), Correlation data and its interpretation, Computer data analysis	
9	Scientific Writing Skeleton of research paper, author guidelines, good writing skills, importance of discussion, Macro-level discussion. Structure of the documents. General issues of presentability. Micro-level discussion. Stylistic issues. Examples of bad and good writings.	6
10	Publishing and Reviewing Publication process, How to publish papers, where to submit, Review process and reacting to a review report Reviewing scientific papers	4
11	Scientific Norms and Conventions Authorship. Plagiarism. Simultaneous submissions. Reviewing norms. Referring to other papers. Use of data. Collaborative Research Work	3

<b>List of Prerequisite Courses</b>				
Applied Mathematics I				
<b>List of Courses where this course will be prerequisite</b>				
This course is required for graduating engineers to function effectively in Industry, Academia and other professional spheres. This course is in Semester VIII				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>				
Modern day manufacturing activities and R&D activities need decisions taken with a scientific rigour and should be well-supported by 'statistics'. Chemical engineering graduates who will serve industry as well as postgraduate research students who will serve industry, R&D organisations, or academic research should have a reasonably good background of statistical decision making. This also involves extraction of meaningful data from well-designed minimal number of experiments at the lowest possible material costs. This course will also help the students in all domains of their life by imparting them a vision for critical appraisal and analysis of data.				
<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Fundamental principles of classical design of experiments Strategy of Experimentation, Typical applications of Experimental design, Basic Principles, Guidelines for Designing Experiments.			4
2	Review of Probability and basic statistical inference: Concepts of random variable, probability, density function cumulative distribution function. Sample and population, Measure of Central tendency; Mean median and mode, Measures of Variability, Concept of confidence level. Statistical Distributions: Normal, Log Normal & Weibull distributions, Hypothesis testing.			3
3	Experiments with a Single Factor: The Analysis of Variance Fixed effect model and Random effect model, Model adequacy checking, Contrasts, Orthogonal contrasts, Regression Models and ANOVA, Violation of Normality Assumption: Kruskal-Wallis test. Randomized block designs, Latin square designs, Balanced Incomplete Block Designs			6
4	Factorial designs: Definition, Estimating model parameters, Fitting response curves and surfaces.			3
5	The $2^k$ Factorial Design, Blocking and Confounding in the $2^k$ Factorial Design; Focus of $2^2$ and $2^3$ designs, Blocking and Confounding in the $2^k$ Factorial Design.			6
6	Plackett Burman methods, Central Composite Design (CCD)			3
7	Descriptive Statistics, Probability Distribution and testing of Hypothesis using R			4
8	Regression techniques, diagnostic checks, ANOVA using R and implementation of contrasts.			4
9	Construction of Balanced Incomplete Block Designs and data analysis using R			4
10	Analysis of factorial designs using R, understanding output and interpretation.			4
11	Factorial designs, Data analysis and interpretation.			4
<b>List of Text Books / Reference Books</b>				
1	Douglas C. Montgomery, Design and Analysis of Experiments, 8 <sup>th</sup> Edition, John Wiley & Sons, Inc. 2013			
2	Box, G. E., Hunter, W.G., Hunter, J.S., Hunter, W.G., Statistics for Experimenters: Design, Innovation, and Discovery, 2nd Edition, Wiley, 2005.			
3	John Lawson, Design and Analysis of Experiments with R, CRC Press, 2015			
4	Dieter Rasch, Jürgen Pilz, Rob Verdooren, Albrecht Gebhardt Optimal Experimental Designs with R. CRC Press, 2011.			
5	José Unpingco, Python for Probability, Statistics, and Machine Learning, Springer, 2019			
6	Response Surface Methodology: Process and Product Optimization using Designed Experiments: R. H. Myers, D. C. Montgomery.			
7	Introduction to Statistical Quality Control: D. C. Montgomery.			
8	Design of Experiments in Chemical Engineering: Živorad R. Lazić.			
<b>Course Outcomes (students will be able to.....)</b>				
1	Students should be able to understand basic principles of design of experiments.			
2	Students should be able to perform statistical analysis of single experiments and do post hoc analysis.			

3	Students should be able to conduct experiment and analyse the data using statistical methods.	
4	Students should be able to choose an appropriate design given the research problem.	
5	Students should be able to perform statistical analysis of different designs using R and interpret the results.

<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
This course enables students to integrate all the subjects that they have learnt and design plants / processes from Chemical Engineering Principles.					
<b>Course Contents (Topics and subtopics)</b>			<b>Reqd. hours</b>		
1	Every student will be required to solve a problem on design, which will set by one or more of the teachers in the institution. The design will have to be submitted in the form of a standard typed report. Every student will be orally examined. The student will be assessed based on the progress made during the semester. There would be two submissions: (i) Process selection and PFD, (ii) Material and Energy Balance. The submissions will be presented to a panel of faculty members / examiners There will be a weightage of 60% for the submissions and 40% for the presentation. Additional details may be given to the students from time to time by the coordinator.			120	
<b>List of Text Books/ Reference Books</b>					
<b>Course Outcomes (students will be able to.....)</b>					
1	Identify market requirement related to a particular chemical				
2	Draw a process block diagram from a given process description.				
3	Select a site for the project				
4	Develop a PFD based on block diagram				
5	Do material and energy for all the equipment in PFD.				

	<b>Course Code: CET3452</b>	<b>Course Title: Chemical Industrial Management</b>	<b>Credits = 2</b>

<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
This course integrates Biological sciences and chemical engineering and a requisite for Biobased Industry					
	<b>Course Contents (Topics and subtopics)</b>				<b>Reqd. hours</b>
1	Introduction to Biotechnology: Role of chemical engineers in biotechnology				3
2	Basic of Genetic Engineering and Tissue Culture: Recombinant DNA technology				3
3	Structure function relations of enzymes; Classification,				3
4	Mechanism of Enzyme action, Enzyme kinetics, inhibition and regulation				3
5	Enzyme purification and characterization, Coenzymes, cofactors				3
6	Enzyme reactors, thermostabilization, immobilization of enzymes				3
7	Enzymes as industrial catalysts- Examples				2
8	Plant and animal cell cultures for the production of biochemicals, Immobilized cells.				4
9	Kinetics of microbial growth, models and simulations, Batch and continuous culture, Mixed microbial culture				8
10	Biochemical process development and bioreactors using biological catalysts				8
11	Integration of downstream processing with bioprocessing				4
12	Transport phenomena in bioreactions and bioreactors				4
13	Fundamentals of fermentation-submerged fermentation, Fermenter design and basic biochemical engineering aspects of fermentation				4
14	Reactor design for biochemical reactions and scale up, Process Design for bioproducts, Bioreactor design, Scale up of bioreactions/reactors,				8
<b>List of Text Books/ Reference Books</b>					
	Biochemical Engineering Fundamentals, Bailey and Olis, Wiley				
	Biotransformations and Bioprocesses, Doble, Anilkumar and Gaikar, Marcel Dekker				
<b>Course Outcomes (students will be able to.....)</b>					
1	Calculate microbial/enzymatic kinetics parameters				
2	Design enzyme reactors and scale up fermenters				
3	Calculate biomass production/substrate requirements				
4	Decide process parameters				
5	Estimate energy equipments/oxygen requirements				
6	Estimate bio-reactor size/time for a given microbial/enzymatic process.				

Course Code:	Course Title: Multiphase Reaction Engineering	Credits = 3		
		L	T	P
Semester:	Total contact hours: 45	2	1	0
<b>Course Outcomes (students will be able to.....)</b>				
1	calculate operating regime for a given reaction.			
2	calculate intrinsic kinetics from the data on model contactors.			
3	calculate conversion / selectivity / size / temperature / pressure / power required for conducting a given multiphase reaction equipment.			
<b>List of Prerequisite Courses</b>				
	Chemical Reaction Engineering , Momentum Transfer, Mass Transfer, Heat Transfer, Chemical Reaction Engineering, Chemical Engineering Operations, Separation Processes, Chem Engg Thermodynamics			
<b>Course Contents (Topics and subtopics)</b>				
		<b>Reqd. hours</b>		
1	Classification of multiphase reactors, qualitative description, examples of industrial importance	8		
2	Hydrodynamics, scale-up, process design and performance of the following major classes of multiphase reactors, case studies and problems, w.r.t:			
2a	Stirred tank reactors,	10		
2b	Bubble columns, packed bubble columns, sectionalised bubble columns,	8		
2c	Internal loop and external loop air-lift reactors, jet loop reactors,	6		
2d	Fluid-fluid reactors such as spray columns, packed columns, plate columns, static mixers, rotating disc contactors	5		
2e	Fixed bed reactors, trickle bed reactors,	4		
2f	Solid-liquid and gas-solid fluidised bed reactors, solid-gas transport reactors	4		
<b>List of Text Books</b>				
1	Heterogeneous Reactions, Vol. I and II – L. K. Doraiswamy, M. M. Sharma			
2	Fluid Mixing and Gas Dispersion in Stirred Reactors – G. B. Tatterson			
3	Bubble Column Reactors – W. D. Deckwer			
4	Fluidisation – D. Kunni and O. Levenspiel			
5	Gas Liquid Reactions – P. V. Danckwerts			
6	Fluidisation – J. F. Davidson and D. Harrison			
7	Random Packings and Packed Tower Design – R. F. Strigel			
<b>List of Additional Reading Material / Reference Books</b>				

	<b>Course Code:</b>	<b>Course Title: Mathematical Methods &amp; Optimization in Chemical Engineering</b>	<b>Credits = 4</b>		
	<b>Semester:</b>	<b>Total contact hours: 60</b>	<b>L</b>	<b>T</b>	<b>P</b>
			<b>2</b>	<b>0</b>	<b>4</b>
<b>List of Prerequisite Courses</b>					
1	Applied Mathematics – I and II, Momentum Transfer, Chem. Eng. Operations, Chem Engg Thermodynamics I and II				
<b>List of Courses where this course will be prerequisite</b>					
1	Transport Phenomena				
2	Heat transfer, Chemical Reaction Engineering , Chemical Process Control, Optimization of Chemical Engineering Systems, Home Paper I and II, Seminar, etc.				
<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
In this course advanced mathematical tools are covered which will help students to solve complex problems in Chemical Engineering. This course will serve as a bridge between the applied mathematics courses and their application to Chemical Engineering problems. Specifically, the techniques learnt in this course will help problem formulation and solution in Chemical Reaction Engineering, Chemical Process Control, Heat Transfer and Transport Phenomena. Many Chemical Engineering problems encounter trade-offs between two or more parameters and thus formulation and solution of an optimization problem helps a Chemical Engineer to obtain the best solution.					
<b>Course Contents (Topics and subtopics)</b>					<b>Reqd. hours</b>
1	Vector algebra: scalar & vector product (application to fluid flow problems) and Linear algebra		12		
2	PDEs: Types, solution (penetration theory, 2D conduction, counter-current heat exchanger, reaction-diffusion, dispersion model, etc.)		8		
3	Fourier series, transforms (diffusion equations), Laplace, Z transform		8		
4	Equation scaling, normalization, convergence		4		
5	Integer, linear and quadratic programming (simple scheduling, simple production planning, fuel blending, data fitting, optimal control)		10		
6	Nonlinear programming (Reflux ratio optimization, consecutive reaction, reactor-separator recycle systems)		6		
7	Mixed integer linear programming (flowsheet optimization, supply chain optimization)		6		
8	Multi-objective optimization (design and operation of chemical processes)		6		
<b>List of Text Books/ Reference Books</b>					
1	Kreyszig, E. Advanced Engineering Mathematics.				
2	Pushpavanam, S. Mathematical Methods in Chemical Engineering				
3	Collette, Y. and Siarry, P. Multi-objective optimization				
4	Vanderbei, R.J. Linear programming: Foundations and extensions				
5	Jenson, V.G. and Jeffreys, G.V. Mathematical Methods in Chemical Engineering				
<b>Course Outcomes (students will be able to.....)</b>					
1	Formulate a Chemical Engineering problem into a mathematical problem				
2	Solve (analytically or numerically) ODE and PDE equations encountered in Chemical Engineering Applications				
3	Assess stability of Chemical Engineering systems				
4	Formulate a Chemical Engineering problem into an optimization problem				
5	Solve (analytically or numerically) optimization problems encountered in Chemical Engineering Applications				

	<b>Course Code:</b>	<b>Course Title: Refinery Science and Engineering</b>	<b>Credits = 3</b>

<b>Description of relevance of this course in the Int. M. Tech. Program</b>					
<b>Course Contents (Topics and subtopics)</b>					
					<b>Reqd. hours</b>
1	Relevance and examples, Atom economy and green chemistry concepts, Homogenous and heterogeneous catalysis				10
2	Fundamentals of homogeneous catalysis and mechanisms and kinetics, Fundamentals of adsorption, isotherms, energetics, structural and dynamic considerations,				10
3	Mechanisms, models and kinetics of surface reactions, Fractal models, Determination of surface structure through modern methods, Significance of Pore structure and models				10
4	Catalysts Characterization methods : Surface area and pore volume determinations, XRD, various Spectroscopic techniques, Temperature programmed reduction & oxidation, Electron microscopy.				10
5	Solid and surface chemistry of catalysis, Quantum mechanical, molecular mechanical and hybrid models, Catalyst design through artificial intelligence and computer modelling				10
6	Poisoning, promotion, deactivation and selectivity, Catalytic process engineering, Measurement of catalytic rates and kinetic parameters, Types of reactors				10
<b>List of Text Books/ Reference Books</b>					
1	G. Ertl, H. Knozinger and J. Weitkamp, "Handbook of Heterogeneous Catalysis" Vol 1-5, Wiley - VCH.				
2	J.J. Carberry, "Chemical and catalytic reaction Engineering", Dover Publications.				
3	C. H. Bartholomew and R. J. Farrauto "Fundamentals of Industrial catalytic Processes", Wiley- VCH.				
<b>Course Outcomes (students will be able to.....)</b>					
1	Understand synthesis, characterization, activity and deactivation of heterogeneous catalyst				
2	Understand the mechanisms of homogeneous catalysis				
3	Understand the role of catalysis in industrial processes				
4	To plan, develop and test catalyst for given application				
5	Suggest strategies for catalyst development				
6	Select and design multiphase catalytic reactors				

<b>Course Code:</b>		<b>Course Title: Statistical Thermodynamics</b>		<b>Credits = 3</b>		
<b>Semester:</b>		<b>Total contact hours: 45</b>		<b>L</b>	<b>T</b>	<b>P</b>
				<b>3</b>	<b>2</b>	<b>0</b>
<b>Course Outcomes (students will be able to.....)</b>						
1	Student would be able to understand and use the concept of microcanonical, canonical, grand-canonical and PVT ensembles and the partition functions thereof					
2	Student would be able to relate macroscopic thermodynamic quantities like entropy and free energy to the partition functions					
3	Student would be able to understand the algorithms behind Monte Carlo simulations and write a simple Monte Carlo Simulation					
4	Student would be able to understand the algorithms behind Molecular Dynamics Simulations and write a simple MD simulation					
5	Student would be able to understand and use the fluctuation dissipation theorem in conjunction with Monte Carlo simulations to determine transport coefficients using the Green Kubo relations.					
<b>List of Prerequisite Courses</b>						
Mathematics especially probability, vectors and linear algebra, Computer Programming especially working with arrays and vectors.						
<b>Course Contents (Topics and subtopics)</b>						
						<b>Reqd. hours</b>
1	Introduction to statistical mechanics – a first look at the Canonical Ensemble. Introduction to the Boltzmann Distribution					3
2	Introduction to the microcanonical, PVT and Grand Canonical Ensembles					3
3	Macroscopic Thermodynamic Quantities as Functions of Ensembles with particular emphasis on the microscopic level difference between Heat Transfer and Work Transfer.					3
4	a) Derivation of the Ideal Gas Law using Schrodinger's Equation applied to Particle-in-a-box and extended to many particle systems using statistical mechanics b) Derivation of Pressure for an Ideal Gas and introduction to the Virial Theorem					8
5	Introduction to the pair interaction energy, pair correlation function (radial distribution function) and determination of macroscopic thermodynamic quantities including derivation of the van der Waals equation of state.					5
6	Introduction to Importance Sampling, detailed balance and the Metropolis Monte Carlo Algorithm					3
7	Writing a code for Monte Carlo simulations in 1D using periodic boundary conditions					3
8	Phase Space, the Liouville Theorem and Molecular Dynamics Simulations					3
9	Symplectic integrators and writing a code for molecular dynamics simulations in 1D using periodic boundary conditions					3
10	Fluctuation Dissipation theorem and the Green Kubo relations to determine transport properties from MD simulations  Writing code to determine thermodynamic and transport properties of a system from fluctuations and autocorrelations thereof.					8
11	Introduction to Transition State Monte Carlo Simulations for Phase Equilibria					3
<b>List of Text Books</b>						
1.	An Introduction to Statistical Thermodynamics by Terrence Hill (Dover Books)					
2.	Understanding Molecular Simulations by Daan Frenkel and Berend Smit (Academic Press)					
3.	Classical Dynamics of Particles and Systems S.T. Thornton and J. B. Marion (Cengage Learning)					
4.	Statistical Mechanics D. A. McQuarrie (University Science Books)					
<b>List of Additional Reading Material / Reference Books</b>						

**LIST OF ELECTIVES**

## ELECTIVE SUBJECTS

The elective subjects may be added from time to time with prior approval from UGPC/Senate.

1.	<p><b>PYT 1104E – Molecular Quantum Mechanics (Applied Physics Department)</b>  <b>Revision of Basic Concepts</b>                      Schrodinger equation for the hydrogen atom, solution in terms of radial and angular wavefunctions, significance of quantum numbers, atomic spectra.                      The quantum harmonic oscillator, eigenvalues and eigenfunctions (no detailed derivation), significance of ‘zero-point’ energy.  <b>Origin of Molecular Spectra</b>                      Analysis of diatomic molecule as a rigid rotator, rotational and vibrational energy levels of a simple diatomic molecule.  <b>Approximation methods in Quantum Mechanics</b>                      Brief introduction to perturbation theory with simple examples, variational theorem, analysis of helium atom as an example.  <b>Molecular Quantum Mechanics</b>                      Molecular orbital and valence bond theories for diatomic molecules, Born-Oppenheimer approximation, LCAO method in <math>H_2^+</math> ion and <math>H_2</math> molecule, valence bond method</p>
2.	<p><b>PYT 1105E – Statistical Mechanics (Applied Physics Department)</b>  <b>Basic Statistical Approach to a System</b>                      Applicability of the statistical approach to a system, equilibrium and fluctuations, irreversibility and approach to equilibrium, counting of system states – macrostates and microstates, equiprobability postulate, concept of statistical ensemble, number of accessible states of a system, phase space.  <b>Ensemble approach to Thermodynamics of Physical Systems</b>                      Isolated system – microcanonical ensemble, system in contact with a heat reservoir, canonical ensemble, Maxwell-Boltzmann distribution as an example, mean values in a canonical ensemble, partition function for a canonical ensemble, relation to thermodynamics.  <b>Generalised Interactions</b>                      Grand canonical ensemble, systems with variable number of particles, chemical potential, partition function for a grand canonical ensemble, relation to thermodynamic variables.  <b>Applications to Multi-phase Systems</b>                      Stability conditions for a homogeneous system, equilibrium between phases, phase transformations, general relations for a system with several components, general conditions for chemical equilibrium, chemical equilibrium between ideal gases, the equilibrium constants in terms of partition functions.</p>
3.	<p><b>CHT 1403E – Advanced Spectroscopy (Applied Chemistry Department)</b>  <b>UV-VIS spectroscopy</b> - Woodward rules, aromatic and heterocyclic compounds  <b>IR spectroscopy:</b> FT technique, group frequencies, vibrational coupling. NIR spectroscopy. New applications  <b>Raman spectroscopy:</b> Stokes, anti-Stokes and Releigh scattering, rotational and vibrational transitions. Raman vs IR.  <b>NMR spectroscopy:</b> Pulse technique, FID, and FT. Relaxation and saturation phenomena, quadrupole relaxation, isotopomers.  <b>H1 NMR:</b> Chemical shifts and factors affecting the same, spin-spin coupling of different systems, different spin systems, coupling constants.                      Simplification of complex spectra: Double resonance and decoupling, lanthanide shift reagents, INDOR technique.  <b>C13 NMR:</b> Basics, double resonance,  <b>2D NMR:</b> H1-H1- COSY, H1-C13 HETCOR- APT and DEPT, C13-C13 connectivity: INADEQUATE  <b>F19 and P31 NMR</b>                      Through space interactions: NOE and NOESY                      Solid state NMR and MAS.  <b>Mass spectrometry:</b> Basics, EI and CI techniques. Isotopic abundance, fragmentation, rearrangement of ions, Maclaferty rearrangement, retrodiels-alder reaction.  <b>Hyphenated techniques:</b> GC-MS, LC-MS, LC-MS-MS, GC-IR, GC-AIS, GC-NMR, LC-NMR  <b>ESR spectroscopy:</b> Theory, experimental technique, Hyperfine splitting</p>

	<p><b>Mossbauer spectroscopy</b> Structure elucidation using combined stereoscopic methods Emission: Flame photometry, ICP, Ark-Spark spectra, Phosphorescence, XRF</p>
4.	<p><b>CHT 1205E – Organometallic Chemistry (Applied Chemistry Department)</b> <b>Nature of C-M bond:</b> Metal-carbon bond with main group and transition elements. Factors controlling metal-carbon bond formation. Methods of M-C bond formation. Nomenclature and hapticity. Electron counting and 16 and 18 electron rules - applications and exceptions. Stability. Stereochemical nonrigidity in organometallic compounds. Structure and bonding of metal alkyls and aryls. Complexes with CO and related ligands, olefins, acetylenes and related unsaturated molecules. Organic transition metal complexes as protective and stabilizing groups for double bond, triple bond, propyl cation and short lived species. Complexes with cyclopentadiene and arenes and other C<sub>n</sub>H<sub>n</sub> sandwich and half-sandwich complexes. Hydride, dinitrogen and dihydrogen complexes <b>Bimetallic and cluster complexes:</b> Structure and applications in catalysis <b>Basic organometallic reactions:</b> Ligand substitution, oxidative reactions, migratory reactions, migratory insertion, extrusion, oxidative addition, reductive elimination, reductive elimination – mechanism and stereochemistry. <b>Nucleophilic reagents with C-M bond:</b> Li, Mg, Al, Ti and Ce alkyls; Organocuprates, organic zinc reagents Alkyne complexes: Pauson Khand reaction. The use of stoichiometric transition metal complexes in the synthesis of complex organic molecules - enantioselective synthesis via organometallic compounds. Organo silicon compounds, boranes, carboranes and, metallocarboranes, organo platinum complexes, metallocenes Importance of organometallic compounds in Biological systems</p>
5.	<p><b>CHT 1206E – Green Chemistry &amp; Catalysis (Applied Chemistry Department)</b> <b>Concept of Green Chemistry:</b> Twelve principles of green chemistry, E factor, Waste management <b>Types of catalysis:</b> Homogeneous and Heterogeneous catalysis. Catalytic cycles <b>Organometallic compounds used as catalysts:</b> Pd, Rh, and Ru in C-C bond formation. Catalytic properties of mononuclear compounds <b>Homogeneous catalysis:</b> Hydrogenation, hydroformylation, hydrocyanation, Hydrosilylation, Wilkinson catalysts, Chiral ligands and chiral induction, Ziegler-Natta catalysts <b>Mercuriation and oxymercuration</b> <b>Organopalladium catalysts:</b> Suzuki coupling, Heck coupling and related cross coupling reactions. <b>Alkene oligomerization and metathesis.</b> <b>Catalytic oxidations and reductions:</b> Epoxidation, dihydroxylations. including carbonylation, decarbonylation, olefin isomerization, arylation <b>Important catalytic reactions:</b> Monsanto acetic acid process, Wacker process, Heck reaction.</p>
6.	<p><b>CHT 1303 – Theoretical and Computational Chemistry (Applied Chemistry Department)</b> <b>Basics:</b> Wave character and wave functions, De Broglie equation, normalization and orthogonalization, Quantum mechanical operators, Schrodinger equation, particle in an infinite square well potential, quantum mechanical harmonic oscillator, angular momentum operator and rigid rotor, Born Oppenheimer approximation, potential energy surfaces, self consistent field wave functions, <b>Computational methods:</b> Molecular mechanics, MO theory, semi empirical and ab initio methods, SCF theory, Hartree Fock method, DFT.</p>
7.	<p><b>MAT 1107E – Momentum, Heat and Mass Transfer (Applied Mathematics Department)</b> Derivation of equation of momentum, energy, mass transfer in curvilinear coordinate system, constitutive equation (Newtonian &amp; Non Newtonian fluids), Flow in some simple cases - Flow between two concentric cylinders, flow between two concentric rotating cylinders, hydrodynamics of bearings lubrication, steady flow around a sphere (theory of very slow motion). Singular perturbation theory, derivation of boundary layer equations (using singular perturbation theory), similar and non similar solutions for some forced, mixed and natural convection problems (using boundary layer theory) . Flow stability, theory of ordinary diffusion in liquids, diffusion with homogeneous chemical reaction, diffusion into a falling liquid film (forced convection mass transfer).</p>
8.	<p><b>MAT 1108E – Turbulent Flow and CFD (Applied Mathematics Department)</b></p>

	<p>Derivation of equations of momentum and energy for turbulent flows. Modelling of turbulent flows: kinetic energy, algebraic stress model, Low Reynolds number model, LES model etc.</p> <p>Turbulent boundary layer flows and similar solutions</p> <p>Grid generation</p> <p>Use of Control volume method, Methods of lines, Finite difference, Finite element and various algorithms (SIMPLE, SIMPLER &amp; SIMPLEC etc) to solve the momentum, energy and mass transfer equations for simulation of some practical problems (Simulation of stirred vessel, Natural convection flow inside a closed chamber etc)</p>
9.	<p><b>GET 1303E – Advanced Strength of Materials (General Engineering Department)</b></p> <p>Analysis of Trusses - Condition for perfect truss, redundancy, stable, unstable truss. Analysis of truss by method of joints, method of sections.</p> <p>Torsion of a circular shaft - concept, basic derivation, shear stress distribution, simple problem.</p> <p>Short and Long columns (Struts) - Basic concept, crippling load, end conditions. Euler's and Rankine's approach (without derivations)</p> <p>Thick and Thin cylinders - concept of radial, longitudinal stresses, behaviour of thin cylinders. Problems on thin cylindrical and spherical shells. Behaviour of thick cylinders (theory only).</p> <p>Advance stresses and strains – Representation of stress and strain at a point, Stress strain relationship, plane stress and plane strain. Transformation of stresses and its importance, Principal stresses and strains, maximum shearing stress, Mohr's circle its use and construction.</p> <p>Basics of Engineering Design - Steps in the engineering design, Importance of analysis, 1-D, 2-D and 3-D analysis and interpretation of results. Design philosophies, factor of safety, Force displacement relationship, Strain deformation relationship, Introduction to finite element packages. Computer aided analysis and design.</p> <p>Composite Materials – Types of composite materials, fillers for composites, polymer composites, fibres and matrix for a composite material, Types of fibres, their properties, woven and non woven fibres, manufacturing of polymer composite materials. Mechanics of composite materials, Properties and testing of composite materials, Uses of composite materials.</p> <p>Advance materials for industrial applications - Advances in materials, Materials used for coatings, anticorrosive coatings, special purpose floorings, water proofing compounds, Various polymers and epoxies used for industrial applications. Different types of performance enhancing and special purpose construction chemicals. Plasticizers and super-plasticizers, air entraining agents, accelerators and retarders, viscosity modifying agents, corrosion inhibitors.</p>
10.	<p><b>HUT 1105E – Industrial Economics (Humanities)</b></p> <p>Nature and Significance of Economics</p> <p>Demand and supply / elasticity of demand and supply, price determination, demand forecasting</p> <p>theory of firm : (A) financial aspects : cost analysis, revenue structure, conditions for profit maximisation, different market structures (B) technical aspects : factors of production, role of entrepreneur, laws of return, returns to scale.</p> <p>Money market and capital market, evolution of money and banking, foreign exchange and currency de-valuation.</p> <p>Budget, taxation, public expenditure, borrowing and deficit financing</p> <p>Development issues and economic planning in India, Role of public sector / liberalisation / privatisation / globalization</p>
11.	<p><b>CET 1506E – Engineering Aspects of Manufacturers of Organic Chemicals (Chemical Engineering Department)</b></p> <p>Special features of process parameters and reactors used for typical organic processes such as hydrogenation, oxidation, alkylation, nitration, sulphonation etc. Different strategies of conducting reactions. Introduction to a few name reactions such as Friedel Crafts reactions, Sandmeyers reaction, Darzens condensation, etc. Typical reaction schemes for the synthesis of medium and low volume chemicals, with an emphasis on the alternative flow sheets of the entire process.</p>
12.	<p><b>CET 1204E – Electrochemical Engineering (Chemical Engineering Department)</b></p> <p>Introduction to electrochemical engineering. Theoretical aspects and special features of electrochemical process. Role of mass transfer in a variety of electrochemical processes. Some aspects of electrochemical reactor design. Scale-up and optimization of reactors.</p>
13.	<p><b>CET 1712E – Mathematical Methods in Chemical Engineering (Chemical Engineering Department)</b></p> <p>Classification of problems in Chemical Engineering. Typical problems from heat transfer, catalysis, mass transfer with chemical reaction, dynamics of process equipments, etc. Numerical</p>

	<p>evaluation of Laplace Transforms. Separation of variables, Eigen values, Collocation Techniques.</p>
14.	<p><b>CET 1713E – Statistical Methods in Engineering (Chemical Engineering Department)</b> Continuous and discrete probability distributions, normal, chi-square, gamma, Poisson distributions. Applications. t-Tests, F-Test, Homogeneity tests, Quality Control. Acceptance sampling Linear regression and lack of fit Contingency tables.</p>
15.	<p><b>CET 1103E – Heat Transfer Equipment Design (Chemical Engineering Department)</b> Classification of Heat Transfer Equipment, direct, indirect, boiling, fired, Fluidised, geometry, construction. Thermal design methods of heat exchangers : survey, capital NTU, LMTD concept, temperature approach, etc. Shell and Tube heat exchangers : thermal, mechanical design, hydraulic design and equations, introduction to codes and standards Extended surface heat exchanger design : plates, plate fins, effectiveness factor. Heat transfer equipment with phase change, two phase flow maps, and design of equipments for heat transfer and pressure drop. Fluidised bed and direct heat exchangers design methodology. Synthesis of optimal heat exchanger networks. Worked Examples</p>
16.	<p><b>CET 1205E – Mixing (Chemical Engineering Department)</b> Examples of industrial importance Flow pattern, power consumption, classification of impellers, internals Mechanism of mixing, Blending in viscous and turbulent system, Suspension of solid particles, Heat transfer, Gas-liquid dispersion, Liquid-liquid dispersions, Three phase dispersions, Solid-solid mixing, emulsions, pastes, Mass transfer at gas-liquid, liquid-liquid, solid-solid and solid-liquid interface Process design and scale-up considerations case studies</p>
17.	<p><b>CET 1507E – Petroleum Reservoir Engineering (Chemical Engineering Department)</b> Energy sources, world scenario, oil pricing, Genesis of petroleum and migration, Composition of petroleum and its classification, Petroleum reservoirs, Exploration and drilling technology, Well logging and well completion, Core analysis, Capillarity and wettability, Models of pore structure and multiphase flow , Well stimulation and production strategy, Well pressure behaviour, Gas reservoir engineering, Fluid displacement and frontal displacement; Buckley-Leverett theory, Material balance, Decline curve analysis, Well patterns and displacement efficiencies, Primary recovery, Gravity drainage, Waterflooding , Mechanisms of microscopic and macroscopic flow, Transportation of oil and gas, Production rate, reservoir life, Heavy oil and tar sand technologies, Residual oil determination, Computer modelling of reservoirs, Tertiary recovery methods</p>
18.	<p><b>CET 1508 – Enhanced Oil Recovery (Chemical Engineering Department)</b> Residual oil and tracer studies, Defining enhanced oil recovery, Basic equations for fluid flow in porous media, Petrophysics and petrochemistry, Phase behaviour and fluid properties, Efficiency of waterflooding , Pore level mechanisms, Mobility control , capillary number, bond number correlations, Heterogeneity of pore structure and reservoirs, Thermal methods , Steam stimulation, steam flooding and hot water drive, Combustion- forward and reverse, Ancillaries in thermal methods, Miscible flooding, Surfactant flooding, Microemulsion flooding, Foam flooding, Polymer flooding, Micellar-polymer flooding, Alkaline flooding, Carbon dioxide flooding, Inert gas injection, Reactive gas injection, Microbial recovery</p>
19.	<p><b>CET 1104E – Flow Through Porous Media (Chemical Engineering Department)</b> Relevance of pore structure in science and technology, Examples from oil reservoirs, catalysis, soil science, membranes, aquifers, foods, polymers, biology, etc., Pore structures and their determination, Capillarity and wettability, Models of pore structure, Wettability and flow histories, Single phase flow, Multiphase flow, Percolation processes and network models, Fractal models, Simulations of macroscopic properties, Pore level mechanisms of flow, Diffusion and dispersion in porous media, Membrane transport, Analysis of trickle and packed beds, Ultrafiltration, Models of catalyst poisoning and deactivation, Geostatistics</p>
20.	<p><b>CET 1509E – Refinery Science and Engineering (Chemical Engineering Department)</b> Terminology, Origin, Kerogen, Occurrence, Recovery, Classification, Composition, Evaluation, Fractionation, Identification, Asphaltic constituents, Refining chemistry, Refining distillation, Thermal cracking, Catalytic cracking, Hydroprocessing, Reforming, Treatment processes, Gas cleaning, Products, Petrochemicals</p>
21.	<p><b>CET 1206E – Fundamentals of Catalytic Science and Engineering (Chemical Engineering</b></p>

	<p><b>Department)</b>  Relevance and examples, Atom economy and green chemistry concepts, Homogenous and heterogeneous catalysis, Fundamentals of homogeneous catalysis and mechanisms and kinetics, Fundamentals of adsorption, isotherms, energetics, structural and dynamic considerations, Mechanisms, models and kinetics of surface reactions, Fractal models, Determination of surface structure through modern methods, Significance of Pore structure and models, Solid and surface chemistry of catalysis, Quantum mechanical, molecular mechanical and hybrid models, Catalyst design through artificial intelligence and computer modelling, Poisoning, promotion, deactivation and selectivity, Catalytic process engineering, Measurement of catalytic rates and kinetic parameters, Types of reactors</p>
22.	<p><b>CET 1207E – Homogeneous Catalysis (Chemical Engineering Department)</b>  Examples, Single phase and multiphase catalytic reactions, Acid--base catalysis, Transition metal catalysis, Bio-catalysis : Microbes and enzymes, Phase transfer catalysis, Micellar catalysis, Microemulsion catalysis, Electron transfer catalysis, Heteropoly acid catalysis, Homogeneous polymer catalysis, Heterogenisation of homogeneous catalysts, Catalysis by microwaves and ultrasound, Catalyst recovery and reuse</p>
23.	<p><b>CET 1208E – Catalytic Green Science and Technology (Chemical Engineering Department)</b>  Green synthesis and heterogeneous catalysis, Metal and supported metal catalysis, metal-support interaction, Metal oxides and determination of acidity and basicity, Nature and type of supports, Solid acid catalysis, Solid base catalysis, Catalyst design, preparation and activation, Clay and modified clays, Ion exchange resins, Zeolites and zeotypes, Heteropoly acids, Inorganic-organic catalysts, Immobilised enzymes, zozymes, complexes, Electrochemical catalysis, Photocatalysis, Microwave catalysis, Ultrasound catalysis, Synergistic catalysis, Important examples from, Refinery industry -FCC, reforming, platforming, hydroforming, polymerisation, alkylation, isomerisation; hydrosulfurisation, hydronitrogenation, Pharmaceutical and fine chemical industry, Dyestuff and intermediate industries, Perfume and flavour industry, Polymer industry, Textile industry, Paint industry, Edible oil industry, Food industry, Waste water treatment, Catalysis for auto-exhaust pollution abatement, DeNox, DeSOx technologies</p>
24.	<p><b>CET 1602E – Colloid and Interfacial Science (Chemical Engineering Department)</b>  Capillarity: Definition, Existence of surface tension/surface free energy, Laplace equation, Young Equation, Capillarity rise phenomena, Measurement of surface tension, Contact angle Wetting characteristics  Surface Thermodynamics : Surface thermodynamic properties, Kelvin Eqn. Gibbs eqn, Surface Excess, Monolayer phase  Adsorption: Localised vs Mobile adsorption, Adsorption isotherms □ Langmuir, Freundlich, BET etc., - Potential theory, Adsorption from solution, Electrical Diffuse Double layer theory, Debye Huckel theory scaled particle theory, Stern layer, Surfactant adsorption  Micelles: Classes of surfactants, synthesis of surfactants, Micelle structures, Determination of HLB, Models for micelle formation, Swollen micelles, Hydrotrophy  Solubilization in micelles :Location of solubilizate in micelles, Measurement of solubilization, Spectroscopic methods:NMR, Fluorescence, IR etc, Detergency, selective solubilization  Emulsions :Micro and macro emulsions, Stability of emulsions (Mechanical vs. thermodynamic), Bancroft rule, deemulsification, HLB for emulsion, multiple emulsions, applications  Foams: Gibbs triangle, Film elasticity, drainage of films, Foam, defoaming, applications of foams</p>
25.	<p><b>CET 1603E – Interfacial Science and Engineering (Chemical Engineering Department)</b>  Definitions: Chemical and physical properties of interfaces, Introduction to surface mechanisms and thermodynamics, capillarity, meniscus shapes, contact angle, surface tension and its measurement, Laplace Equation, Young's equation, Kelvin Equation, Gibbs equation, equilibrium criteria, dividing surface, monolayers and films, mobile and fixed interfaces Interfacial areas and degrees of wetting, aerosols, liquid-liquid and particulate dispersions, Bubbles, and drops aphrons.  Microphases: Definitions and dynamics, Micelle formation surfactants CMC, structures of micelles, swollen micelle and microemulsions models, phase diagrams, Macroemulsions, Mechanical vs thermodynamic stability, HLB, Bancroft rule and other systems, Foams Colloids, Film elasticity, drainage, association, Langmuir-Blodgets film production. Experimental techniques of measurement of relevant properties: surface tension, solubilization,</p>

	<p>thermodynamic properties, spectroscopic techniques</p> <p>Rheological aspects of two phase (involving microphases) flow and transport, visco-elasticity of surfactant solutions.</p> <p>Solubilization and catalysis by microphases: Models, theories and data, surface potential and equations of state, double layer theory, layer Debye-Huckel theory, Thermodynamics of solubilization, Hydrotropy</p> <p>Emulsification and Demulsification, foam breakage, theories of coalescence, and agglomeration, Brownian motion, shear and other models.</p> <p>Applications: Adsorption, foam fractionation, froth floatation Enhanced oil recovery, Novel separation processes, Coagulation, Flocculation, Microelectronics, surface vapour deposition, other applications with techniques</p> <p>Monte Carlo simulation for molecular dynamics of structures, graphics software for structural display.,</p> <p>Diffusion on the surface and in microphases.</p>
	<p><b>CET 1403E – Adsorptive Separations (Chemical Engineering Department)</b></p> <p>Separation Processes: overview, alternative separation techniques, Mass separating agents</p> <p>Adsorbents: Molecular sieves activate carbon, zeolites alumina, silica ion exchangers, Polymeric adsorbents</p> <p>Physical and Reactive adsorption: Selectivity engineering in catalysis, Gaseous and liquid adsorption, Thermodynamics of adsorption, Statistical thermodynamics of adsorption phenomena, Surface excess, theories of adsorption. Separations: Bulk separation, purifications, Concentration and recovery from dilute solutions: metals, organic chemicals, microelectronics</p> <p>Design of adsorbents: Gaseous and liquid phase adsorption</p> <p>Theoretical analysis of diffusion in relation to adsorption in micropores</p> <p>Chromatographic separations: Bulk chemicals separations, Purification, refining operations, Biochemical applications</p> <p>Novel separation techniques using adsorbents, Industrial examples</p>
	<p><b>CET 1209E – Advanced Biochemical Engineering (Chemical Engineering Department)</b></p> <p>Biotechnology, Biochemistry and microbiology, Enzymatic reactions, cell culturing</p> <p>Enzyme engineering, enzyme modifications, stability, reactivity and selectivity considerations</p> <p>Genetics and Genetic engineering, DNA recombinant technology, Hybridoma technology, single cell proteins, gene manufacturing</p> <p>Fermentation and design of fermenters with modified organisms</p> <p>Bioprocess simulations, molecular modelling for protein synthesis and drug design, protein engineering</p> <p>Applications in fermentation industry, pharmaceutical industry, medical field such as gene therapy, Biomedical engineering</p> <p>Bioreactor design, Scale up of bioreactions/reactors, Downstream processing in biochemical industry</p> <p>Organic synthesis using enzymes</p>
	<p><b>CET 1404E – Downstream Processing in Biochemical Industry (Chemical Engineering Department)</b></p> <p>Separation processes in biochemical industry, Separation processes for bulk chemicals and proteins, special needs, Unit operations on biochemical industry, such as filtration, centrifugation, heat and mass transfer, Solvent extraction: liquid-liquid extractions, phase diagrams, thermodynamics of liquid-liquid extraction, physical vs reactive extraction, liquid ion exchangers, design of extractors, two phase flow in extractors, modelling and simulation of extractors, Aqueous two phase extraction, affinity partitioning, dye ligand partitioning, Reverse micellar extraction of proteins and enzymes, Adsorption: physical and chemical adsorption, theories of adsorption, ion exchange resins and polymeric adsorbents, adsorption of small molecular weight bioproducts such primary and secondary metabolic products of cells, Protein purifications, precipitation, affinity precipitation, adsorptive and chromatographic separations of proteins, design of adsorption columns, Methods of operation., Gel permeation chromatography, metal ligand chromatography, dye ligand chromatography, affinity chromatography, expanded bed chromatography,</p> <p>Applications in biochemical industry.</p>
	<p><b>CET 1405E – Advanced Separation Processes</b></p> <p>Membrane Processes : Principles of various membrane processes like Reverse Osmosis, pervaporation, gas separation and electro-dialysis. Design equations and module design.</p>

	<p>Concentration polarization.</p> <p>Adsorption and Ion Exchange Processes : Adsorption and ion exchange equilibria. Various isotherms. Contact filtration, design of fixed bed adsorber including breakthrough curve.</p> <p>Chromatographic Separations : Principles of chromatographic separation, criteria for effective separation, supports and methodology and process design.</p> <p>Separation of Racemic Mixtures : Principles of racemic modification and their application in separation of racemic mixtures with specific examples.</p> <p>Dissociation Extraction, Reactive Extraction</p>
	<p><b>CET 1210E – Introduction to Polymer Engineering (Chemical Engineering Department)</b></p> <p>Introduction to Polymers : Classification based on application and history, Natural and synthetic polymers and types e.g. fibres, rubbers, adhesives, resins, plastics, etc.</p> <p>Classification based on properties/structures : Thermoplastic, thermosetting, crystalline, amorphous, molecular weights status, transitions, glass transition temperature</p> <p>Polymer formation/modification : Functionality and reactions, chain, ionic, condensation, coordination, complex polymerisation, Kinetic schemes, Orders of reactions, Cross-linking, Co-polymerisation, Heat effects</p> <p>Polymerisation Processes and methods of manufacture : Bulk, Solution, Suspension and emulsion polymerisation with examples, polystyrene, polyethylene/propylene, styrene-Butadiene, poly urethane, Epoxy, PET, Kinetics, reaction rates, diffusional limitations, Biodegradable polymers.</p>
	<p><b>CET 1604E – Polymer Processing (Chemical Engineering Department)</b></p> <p>Plastic Technology : Moulding, (injection, blow) extrusion, cold-chamber and vacuum forming multipolymer systems. Equipments design and operating conditions</p> <p>Fibre Technology : Textile processing, fibre spinning and after treatment. Equipments design and operating conditions</p> <p>Elastomer Technology : Vulcanisation, Reinforcement compounding</p> <p>Equipments- design &amp; operating conditions, environmental impact</p> <p>Recycle of polymers : Reprocessing techniques and limitations</p> <p>Selection of polymers : domestic &amp; engineering usage</p> <p>Rheological and mechanical measurements concept of solution viscosity</p>
	<p><b>CET 1211E – Polymer Reactor Engineering (Chemical Engineering Department)</b></p> <p>Kinetic modelling, concept of reactor design, optimisation and control of polymerisation process, isolation and separation of monomers/catalyst/by products etc for Bulk polymerisation, Solution polymerisation, Emulsion polymerisation, suspension polymerisation with case studies</p> <p>Kinetic modelling of co-polymerisation processes.</p>
	<p><b>CET 1605E – Advanced topics in Polymer Chemistry/Physics Characterisation/Analysis of Polymers (Chemical Engineering Department)</b></p> <p>Structure/property relationship : Morphology &amp; Crystallinity Mechanical and Chemical properties</p> <p>Structure/Rheology relationships</p> <p>Rheology, elasticity, Viscoelasticity, yield and fracture chemical resistance</p> <p>Properties of commercial polymers. PE, PP, Acrylic, amides &amp; peptides phenolic &amp; Urethane resins</p> <p>Role of Additives : Type of additives and their role in altering the properties</p> <p>Polymer composites : Carbon filled, fibre filled etc. Reinforced polymers</p> <p>Analysis of polymer solubility, thermodynamics and phase equilibrium of polymer solutions, End group analysis, Colligative property measurement, Light scattering, Solution viscosity and molecular size and wt distribution. Spectroscopic methods, microscopy, thermal analysis.</p> <p>Selection of polymers, domestic and engineering usage.</p>
	<p><b>CET 1510E – Fuels Engineering (Chemical Engineering Department)</b></p> <p>Classification of fuels : G/L/S</p> <p>Automotive Fuels Bharat Standards II III &amp; IV</p> <p><b>Gaseous Fuels:</b></p> <p>Natural Gas: Processing for pipe line specs</p> <p>CO<sub>2</sub>/H<sub>2</sub>S/COS Removal</p> <p>Gas dehydration</p> <p>Gas compression for pipe line transport</p> <p>Coal bed methane, Bio Gas (methane)</p> <p>CNG : As auto fuel, Compression, CNG stations</p> <p>LNG : Liquefaction of NG JT effect, closed &amp; open cycle , Storage of</p> <p>LNG, Transportation of LNG, vessels / truck, terminal, Gasification</p>

	<p>of LNG to NG for pipeline transport</p> <p><b>Liquid Fuels:</b>  Refinery sources, Reforming for fuels  LPG : Domestic and Auto LPG, Storage and handling,  Manufacture and Storage (Partly in I&amp;EC) Petrol, Diesel, Aviation Turbine Fuel, HSD, LDO.  Furnace oil, Fuel oil, LSHS.  Biofuels : bioethanol, biodiesel  <b>Solid Fuels :</b> Characterization  Coal  Biomass  Residue from Refinery  Plastic waste  Municipal domestic waste  <b>Combustion of Fuels :</b>  Basic equation, air requirement norms for excess air.  Heating value : GHV/LHV Calculations for mixture of components  Wobbe number for Gaseous Fuels definition and significance.  Burners : Gas/Liquid/Hydrogen  Flue gas composition, Dew point calculations  Treatment of flue gas to meet local standards, Carbon Credit  <b>Gasification of</b>  i) Coal, Indian Coal; ii) Biomass; iii) Refinery Heavy Residue  <b>Power generation, combined cycle, cogeneration</b></p>
	<p><b>CET 1511E – Plant Utilities (Chemical Engineering Department)</b>  Role of Process Utilities in process industries. Impact on Project economics  Water, its characteristics and its conditioning and treatment for process industries e.g. boiler feed water, cooling water. Recycling aspects of water from blow downs.  Application of steam systems in chemical process plants, design of efficient steam heating systems, condensate utilization, flash steam, steam traps.  Characteristics properties, classification, selection and industrial applications  Characteristics of air and air receivers, instrument air. Inert gas generation  Vacuum system engineering.  Electrical Power :  HT/LT  Area classification,  Motors/drives selection accordingly.  Single line diagram.  Emergency Drives Identification  Emergency power. Inverters, DG sets. Etc.  Estimation of utilities  Utilities Audit</p>
	<p><b>CET 1512E – Project Management: Case Study Approach (Chemical Engineering Department)</b>  Project: meaning, Different types, why to manage, cost overruns centres, various stages of project execution : conception to commissioning.  Project execution as conglomeration of technical and non technical activities.  Detailed Engineering activities.  Pre project execution main clearances and documents  Project team : Role of each member. Importance  Project site : Data required with significance.  Project contracts. Types and contents.  Project execution  Project cost control.  Bar charts and Network diagram.  Project commissioning: mechanical and process.</p>
	<p><b>CET 1606E – Advanced Materials (Chemical Engineering Department)</b>  Nanostructured Materials: Metal nano particles, their structure and properties  Carbon nano tubes: manufacture, properties and applications.  Nano materials in catalysis.  Composite Materials: Polymer composites, metal-metal composites, polymer-metal</p>

	<p>composites, metal- ceramic composites.</p> <p>Superconducting Materials: Principles of superconductivity, properties, advantages and limitations of superconductors. Applications superconductors</p> <p>Smart Materials: Shape memory alloys, Auxetic materials and Biomimicking materials. Stimulii for sensors and actuators.</p>
	<p><b>CET 1513E – Process Systems Engineering (Chemical Engineering Department)</b></p> <p><b>Introduction to Systems Engineering:</b> Systems and their origin, examples of problems in Systems Engineering</p> <p><b>Foundations of Systems Engineering:</b> Scope and Formulation of Engineering Problems, Goals, Objectives, Specifications and Constraints, Types of Models; Hierarchical decomposition of systems, Types of Problems: Forward solution and inversion of models</p> <p><b>Structural Analysis of Systems:</b> Graphs and digraphs: Representation of systems, Partitioning and Precedence Ordering of systems, Structural analysis of modeling equations, Structural controllability and observability of systems, Applications to engineering problems</p> <p><b>Steady State Analysis of Systems:</b> Formulating steady-state models and simulations, Degrees of freedom and design specifications, The Sequential-Modular Strategy, The Equation-Oriented Strategy, Applications to engineering problems</p> <p><b>Optimization of Systems:</b> Theory and Algorithms: Basic concepts and definitions, Linear programming, Unconstrained nonlinear optimization, Nonlinear Programming, Combinatorial optimization, Applications to engineering problems</p> <p><b>Simulation of Dynamic Systems:</b> Basic concepts: Systems described by ODEs and DAEs, Formulating dynamic simulations; consistent initialization, Numerical integration of ODEs and DAEs, Modeling-simulation of hybrid Discrete/Continuous systems, Applications to engineering systems</p> <p><b>Model-Based Process Control:</b> The nature of feedback control, The concept of model-based control systems, Design and analysis of model-based control systems applications</p>
	<p><b>CET 1106 – CFD applications in chemical processes (Chemical Engineering Department)</b></p> <p>Derivation of equations of momentum and energy for turbulent flows.</p> <p>Finite volume technique</p> <p>One dimensional heat conduction and flow</p> <p>Grid generation</p> <p>Space and time discretization</p> <p>Pressure velocity coupling (simple, simpler &amp; SIMPLEC)</p> <p>OpenFOAM software, simulation of pipe flow, backward step, flow past cylinder</p> <p>Commercial software, simulation of pipe flow, backward step, flow past cylinder, stirred vessel, bubble column, cyclone separator, spray dryer etc.</p> <p>Suggested Books:</p> <p>Versteeg and malalasekera, “An introduction to computational fluid dynamics. The finite volume method”, (2007)</p> <p>Patankar S., “Numerical heat transfer and fluid flow”, (1980)</p>
	<p><b>CET 1407 – Process Design of Heat and Mass Transfer Equipment</b></p> <p>(3 Credits: 2 Lectures + 1 Tutorial – 3 hours per week, 45 hrs total)</p> <p>Advanced Process design aspects of various process equipments will be considered through several case studies; and will cover: hydrodynamic characteristics, heat and mass transfer characteristics, selection criteria, etc. The topics will include some of the following equipment (but not limited to):</p> <ol style="list-style-type: none"> <li>(1) Equipment for heat transfer: plate heat exchangers, plate fin exchangers, finned tube exchangers, thermo-siphon reboilers, evaporators, condensers, etc.</li> <li>(2) Equipment for Unit operations: plate and packed columns, spray towers, etc.</li> <li>(3) Equipment for Multiphase reactions: Stirred tanks, gas inducing reactors, bubble columns / modified bubble columns, air-lift reactors, packed and plate columns, trickle bed reactors, ejectors, etc.</li> </ol>
	<p><b>CET 1408 Advanced Membrane Separations</b></p> <p>Introduction : classification and definitions</p> <p>Membrane Processes and their applications: Microfiltration, Ultrafiltration and micelle-enhanced ultrafiltration, Nanofiltration, Reverse osmosis, Dialysis, piezodialysis, electro dialysis, Pervaporation and membrane distillation, Gas permeation, Liquid membranes, Ion exchange membranes</p> <p>Transport mechanisms, and mathematical modelling</p>

	<p>Membranes: Design of membranes, Characterization  Polarisation and fouling: Polarisation phenomena and fouling concentration polarization, Characteristic flux behaviour in pressure driven membrane operation, Membrane fouling, Methods to reduce fouling  Process design: modules and configurations: Capillary, hollow fibre, tubular, Plate and frame, Spiral wound  Membrane reactors and their applications in biotechnology  Text books:  Mulder, M.H.V. Membrane Separations, Springer.  Philip, R., Wankat, C. Rate-Based Separations, Springer.  Reference books:  Nunes, S.P., Peinemann, K.V. Membrane Technology in the Chemical Industry, Wiley.  Rautanbach and R. Albrecht, Membrane Processes, Wiley.  Crespo, J.G., Bodekes, K.W. Membrane Processes in Separation and Purification, Kluwer Academic Publications.  Geankoplis, C.J. Transport Processes and Unit Operations, Prentice-Hall.</p>
	<p><b>CET 1607 Biomaterials: Biodegradable Materials for Biomedical Applications</b>  Introduction of Biomaterials  Biomaterials Surfaces: Structure and Properties, Surface Energy  Adsorption and Reconstruction at Surfaces,  Protein-Surface Interactions  Proteins: Structure, Properties, Functions, Protein Adsorption: Complex Phenomena, Measurement  Cell-Surface Interactions: Host Response to Biomaterials: Cell adhesion mechanism, coagulation cascade, immune response  Surface Characterization: AES, XPS, AFM, Contact Angle  Quantifying Cell Behavior: Cell Culture, Cellular Assays  Biosensors and Diagnostic devices  Drug Delivery: Controlled Release, Diffusion Controlled and Membrane based devices, Mechanical Pumps  Biomaterial for Organ Replacement  Mechanical Properties, Bone Substitutes  Introduction of Tissue Engineering: Cell, Scaffold design, Artificial liver, pancreas, cartilage  Regulatory overview  Text Books:  Ratner, Buddy D., et al. Biomaterials Science: An Introduction to Materials in Medicine. 2nd ed. Burlington, MA: Academic Press, 2004. ISBN: 9780125824637.</p>
	<p><b>MAT XXXXE: Machine Learning</b>  Machine Learning Concepts: Mean Square Error (MSE), Training Error, Test Error, Bias-variance trade-off, Measuring the quality of fit, Regression Diagnostics, Understanding the concept of model flexibility and prediction accuracy, Universal behaviour of Training and Test MSE. Case study of linear regression with K-nearest neighbour regression  Model Selection and Regularization: Validation set approach, Leave-One-Out-Cross-Validation, K-fold cross validation, Best subset selection, Forward Selection, Backward selection, Hybrid selection, shrinkage methods: Ridge regression, Lasso, Least angle regression.  Decision Trees, Bagging and Boosting, Random Forests, Gradient Boosting, Artificial Neural Network  Classification problem: Logistic Regression, Support Vector Machines, Receiver operating characteristic (ROC) curves, Area under the curve (AUC) and other related accuracy measures  Multivariate methods: Principal Component Analysis, Factor Analysis, Principal component regression, K-means clustering, Hierarchical Clustering, Multi-dimensional scaling  Text Books:  1. Andreas C. Müller and Sarah Guido, Introduction to Machine Learning with Python: David Barber A Guide for Data Scientists, (2016), O'Reilly Media.  2. Hands on Machine Learning with R by Bradley Boehmke and Brandon Greenwell, CRC Press, 2020.  3. Introduction to Statistical Learning with Application in R by James, G., Witten, D., Hastie, T. and Tibshirani, R, 2011.  4. All of Statistics: A concise course on Statistical Inference by Larry Wasserman, 2009.</p>

	<p>5. The Elements of Statistical Learning by Jerome H. Friedman, Robert Tibshirani, and Trevor Hastie (2001), Springer.</p> <p>6. Ethem Alpaydin, Introduction to Machine Learning by (2004), The MIT Press, Cambridge.</p> <p>7. Ian H. Witten, Eibe Frank, Mark A. Hall, Data Mining: Practical Machine Learning Tools and Techniques by (2011), Elsevier</p> <p>8. Machine Learning: A Probabilistic Perspective (Adaptive Computation and Machine Learning series) by Kevin P. Murphy (2012)</p>
	<p><b>MAT XXXXE: Optimization Techniques</b>  Review of local maximum/minimum  Method of Lagrange Multipliers and KKT methods  One dimensional Optimization Techniques: Fibonacci search method, Golden section method and interpolation method.  Direct Search unconstrained optimization: Powell’s method, Nelder-Mead (simplex) method  Gradient Search Optimization Methods: Steepest Descent Method, Newton’s Method, Conjugate gradient methods  Linear Programming: Simplex Method, Revised Simplex Method and other Advanced Methods, Integer Programming  Modern Optimization Techniques; Genetic Algorithms, Simulated Annealing, Ant Colony Optimization  Textbooks:  1. Engineering Optimization: theory and practices, S.S. Rao, New Age International Pvt. Ltd.  2. An Introduction to Optimization, Edwin K. P. Chong &amp; Stanislab H. Zak, Wiley Publication  3. Optimization for Engineering Design, K. Deb, Prentice Hall, India</p>
	<p><b>HUT 1102E: Perspectives of Society, Science and Technology</b>  History of Science and Technology and its relevance in the respective era  Recent developments in technology (chemical, biotechnology energy, telecommunications, etc.) and their influence on society  Economics and Sustainable Development  Value system and Ethics in the profession of Technology, Science and Engineering.  Problems before the World and India. Various approaches in solving them.  Integrating Issue: Society and Science  Industrial disasters and their effect on science and technology and society  Environmental degradation, global warming and their effect on science and technology and society  IPR issues and their relevance to science and technology and society  Some aspects of future of Society, Technology, Science and Engineering.  Interdependence of Theology and Science  Impact of climate change on the nexus of water, energy and water  Technology and World Peace Role of Innovation and R&amp;D  Industry-Academia Interaction to Enhance Standard of Living  Textbooks:  Science, Technology and Society: An Encyclopedia by Sal Restivo, Oxford University Press 2005  Science, Technology and Society: A Sociological Approach by Wenda K. Bauchspies, Jennifer Croissant, Sal P. Restivo  Vision of STS: Counterpoints in Science Technology and Society Studies by Stephan H. Cutcliffe, Carl Mitcham, Sunny Press 2012</p>
