Syllabus for Bachelor of Chemical Engineering (B. Chem. Engg.)

(Under the National Education Policy, NEP 2020) (2023-2024)

Department of Chemical Engineering INSTITUTE OF CHEMICAL TECHNOLOGY (University Under Section-3 of UGC Act, 1956) Elite Status and Centre for Excellence Government of Maharashtra

Nathalal Parekh Marg, Matunga, Mumbai 400 019 (INDIA) www.ictmumbai.edu.in, Tel: (91-22) 3361 1111, Fax: 2414 5614

Preamble:

Chemical engineering is the engineering of systems—at scales ranging from the molecular to the macroscopic—that integrate chemical, physical, and biological elements to design processes and produce materials and products for the benefit of society. Chemical Engineering is the only engineering field with molecules and molecular transformations at its core. These transformations are at the heart of the technologies that enable modern society, and the work of chemical engineers has affected societies and individual lives around the world. It represents a discipline of intellectual inquiry and applications that is profoundly important for society's current and future needs in such vital areas as energy, food, water, medicine, and manufacturing.

Chemical engineering processes, with synthetic fertilizers, made Green Revolution possible to feed the world. With With the invention of a variety of catalysts, the benefits of plastics have reached to masses at affordable cost. Without the invention of tough, stable polymers such as Teflon® and Kevlar®, the commercial and medical devices made from those polymers would not have emerged. The contributions of chemical engineering to the silicon chips, glass materials, and plastics that make up today's ubiquitous electronic devices are undeniable. And without chemical engineering, there would be no oil and gas industry to power the world. Pharmaceutical industry's advances have been supplemented by Chemical Engineering to produce the medicines, therapeutics, and vaccines at scales for global supply needed. In recent years, chemical engineers have contributed to engineering of improved functions in proteins, metabolic pathways, and genomes.

The Chemical Engineering Course has been thus designed to provide best of the characteristics that a graduate of Chemical Engineering would demonstrate in his profession.

The Department of Chemical Engineering of ICT is one of the leading Chemical Engineering Departments in the Country maintaining high standards in teaching, research and industrial association. The Department offers Bachelor of Chemical Engineering, Master of Chemical Engineering and Ph.D.(Tech.) in Chemical Engineering programs. The program syllabus has always been based on strong theoretical background and modern trends in Industrial practice. The Department has thoroughly revised the syllabi of B. Chem. Engg. program in 2023 as per National Education Policy 2020. The NEP-2020 aims at making the education system holistic, flexible, multidisciplinary, and aligned to the needs of the 21st century and the 2030 Sustainable Development Goals. The revised syllabus has come into effect for first year undergraduate Chemical Engineering students from the academic year 2023-24. The revision is compliant with the NEP guidelines and perfect blend of basic sciences, engineering sciences, program electives, Indian knowledge system, co-curricular activities, vocational and skill development courses, ability

enhancement courses, multi-disciplinary minors, honours and research, etc. Students can also opt for courses from digital platforms such as MOOCs, NPTEL etc. The following figure shows the distribution of the courses in the B. Chem. Engg. program. The revised curriculum has significant weightage to hands-on training and also offers flexibility of exit option at regular intervals.

Programme Outcomes (POs) for B. Chem. Engg. Degree Programme

| PO1 | Engineering knowledge | Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. |
|------|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PO2 | Problem analysis | Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. |
| PO3 | Design/development of solutions | Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| PO4 | Conduct investigations of complex problems | Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| PO5 | Modern tool usage | Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations. |
| PO6 | The engineer and society | Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. |
| PO7 | Environment and sustainability | Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| PO8 | Ethics | Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| PO9 | Individual and team work | Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings |
| PO10 | Communication | Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO11 | Project management and finance | Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. |
| PO12 | Life-long learning | Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. |

| PEO1 | Create awareness amongst students about the social/industrial demands and role of chemical engineer in the society. |
|------|------------------------------------------------------------------------------------------------------------------------------|
| PEO2 | Incorporate a culture of research and Innovation by providing students with latest facilities |
| PEO3 | Provide a platform to the students to interact with leading teachers, scientists and industry practitioners |
| PEO4 | Multi-faceted development of students through co-curricular and extra-curricular activities, participation in various events |
| PEO5 | Build technical and managerial capabilities amongst students to meet the needs of society and industry. |

Programme Education Objectives (PEOs) of B. Chem. Engg. Program

Programme Specific Outcome (PSOs) of B. Chem. Engg. Program

The graduates will be able to:

| PSO1 | Understand terminology, basic concepts of science, mathematics, and fundamentals of engineering particularly in Chemical Engineering (Factual Knowledge). |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PSO2 | Comprehend theories or models, choose appropriate model, equipment, or process to meet the specified needs considering feasibility, safety, health hazards, societal, economic, environmental or sustainability factors as well as critically analyse relationships between these factors (Conceptual Knowledge). |
| PSO3 | Investigate, conduct experiments, research, or model as per standards, collect and analyse information based on field visits, analysis, and interpretation of data to prepare the valid technical reports (Procedural knowledge). |
| PSO4 | Apply Chemical Engineering knowledge in various sectors of industry, environment, life, and society, as well as develop solutions to complex problems applying principles and knowledge gained throughout the program or to develop new knowledge or methodologies through research (Metacognitive Knowledge). |
| PSO5 | Cater to the needs of chemical industry, research organizations and academic institutes. set-up their own ventures and generate employment, promote awareness in society about Chemical Engineering profession |

Exit Policy

As under the NEP –2020 guidelines, the following rules and regulations shall be applicable for the exit from the Degree program where the candidate is currently registered, after the First year, Second Year, and Third Year of the B. Chem. Engg. Degree programs:

- a) A candidate who has earned a total of 44 credits after the First year of the Degree Course AND completed eight weeks of practical training can exit the degree course with a Certificate in a relevant degree program.
- b) A candidate who has earned a total of 88 credits after the Second year of the Degree Course AND has completed eight weeks of practical training/Internship can exit the degree course with a Diploma in a relevant degree program.
- c) A candidate who has earned a total of 132 credits after the Third year of the Degree course AND has completed eight weeks of practical training/ Internship can exit the degree with a B. Sc. degree in a relevant degree program.
- d) The candidate shall apply for the exit from the program by this exit policy in a standard format. The letter will be addressed to The Dean, Academic Program. The exit will be permitted only on completion of the training program as prescribed by the Regulations.

| Sr. No. | Exit Year | Mandatory Activity | Credits | Duration (No of Weeks) |
|---------|---------------------------------------------|----------------------------------------------------------------------------|---------|---------------------------|
| 1 | 1 st Year (After Semester II) | 8 credit course workshop/chemistry lab (after semester 2) | 8 | 8 weeks |
| 2 | 2 nd Year (After Semester IV) | Certificate Course in Practice of Chemical Technology of ICT (CCPCT) | 8 | 8 weeks |
| 3 | 3 rd Year (After Semester VI) | In-plant training for 3 months | 8 | 8 weeks |

| | Course Outcomes (students will be able to) | |
| CO1 | Understand the notion of differentiability and apply these concepts to find maxima | K4 |
| | and minima of functions of one and several variables | |
| CO2 | Understand different techniques for evaluating single and multiple integrals and | K4 |
| | apply them compute surface and volume integrals. | |
| | Demonstrate their understanding on different concepts in vector spaces in solving | |
| CO3 | computational problems related to matrices and determinants, such as solving | K3 |
| | systems of linear equations, etc. | |
| | Understand the computational and geometrical concepts related to eigenvalues and | |
| CO4 | eigenvectors and apply them to solve computational problems arising from | K3 |
| | chemical engineering | |
| | Build mathematical models governed by differential equations to formulate | |
| CO5 | chemical engineering problems and solve the equation using appropriate analytical | K6 |
| | | |
| 001 | Solve ordinary differential equations using power series method and understand the | 17.5 |
| 006 | utility and applications of various orthogonal functions in different chemical | K5 |
| V1 T | engineering problems | |
| KI – H | κ contended in κ_2 – Understanding, κ_3 – Applying, κ_4 – Analyzing, κ_5 – Evaluating | $g, \kappa o - Creating$ |

| Chemica | l Process Equipment Des | ign and drawing (GEP1138), Structural Mechanics (GET1 | 123) | | | | | | | | |
| | Description of r | elevance of this course in the B. Chem.Engg. Program | | | | | | | | | |
| A studen | t of Chemical Engineerin | ng is required to know about various processes and equipa | ment us | ed in | the | | | | | | |
| industry. | Some of the elementa | ry processes like filtration, size reduction, evaporation | n, cond | ensat | ion, | | | | | | |
| crystalliz | crystallization etc., are very commonly used in industries. These processes require identification, | | | | | | | | | | |
| manufac | manufacturing, selection of machines and equipment. One should be familiar with the design, manufacturing, | | | | | | | | | | |
| working, | and maintenance of such | machines and equipment. The current is a medium throug | h whic | h one | can | | | | | | |
| learn all | such processes. These "d | rawings" are used to represent objects and processes on pap | per. An | accu | rate | | | | | | |
| commun | ication of engineering kr | nowledge is possible through drawings which is impraction | cable to | o tran | sfer | | | | | | |
| through | a spoken word or a writte | en text. Drawing is a language used by engineers and tech | hnologi | sts. | This | | | | | | |
| course is | a precursor for many su | ibjects. Also a knowledge of this subject is useful for fu | rther p | ursuir | ng a | | | | | | |
| career. | | | | | | | | | | | |

| Cultivation of arts is an integral part of the development of human beings since the arts are what m most human, most complete as people. They offer us the experience of wholeness because they touch the deepest levels of mind and personality. They come into being not when we move beyond necess when we move to a deeper necessity, to the deeper human need to create order, beauty and meaning chaos. They are the expressions of deepest human urges, imperatives and aspirations | | | | | | | | | | | |
| | Course Contents (Topics and subtopics) | | | | | | | | | | |
| 1 | The Institute offers a range of courses in different art forms: music, dance, theatre, painting, and other art forms. Students will be given an option to choose a particular art form, and learn and practice it under an artist-instructor. At the end of the course, a student should be able to demonstrate basic proficiency in that particular art form. | | | | | | | | | | |

| Course Contents (Topics and subtopics) Hou | rs |
| Crystal Structure of Solids: A revision of concepts of a lattice, a basis, unit cell, 3 | |
| 1 different crystal systems (SC, BCC, FCC, HCP), co-ordination numbers and | |
| packing fractions. Single crystalline, Polycrystalline, and Amorphous materials. | |
| Crystallographic planes and directions: concept of Miller indices and its | |
| 2 determination, examples; calculation of inter-planar spacing in terms of Miller 3 | |
| indices. | |
| Determination of crystal structure using X-rays: Bragg's law of X-ray diffraction, | |
| 3 types of diffractometers, Indexing diffraction peaks, and calculation of various 4 | |
| lattice parameters and crystallite size | |
| Energy band in solids and classification of solids, the concept of Fermi level and | |
| 4 Fermi distribution function, Intrinsic and extrinsic semiconductors, Transport 5 | |
| properties of semiconductors: Conductivity in semiconductors and its dependence | |
| of carrier concentration and mobility | |
| Electric and Magnetic properties of materials | |
| Revision of the laws of electrostatics and magnetostatics with illustrative examples. | |
| 5 Introduction to the gradient, divergence, and curl operators. The current density 4 | |
| vector and the continuity equation | |
| Dielectrics: the concept of free and bound charges, polarization, introduction to the | |
| 6 electric displacement and polarization vectors, dielectric constant, and electric | |
| susceptibility. Gauss's law in the presence of dielectrics, Claussius-Mossotti | |
| equation Megnetism. The Longevin theory of Dismogratism and Departmentium deriving | |
| the magnetic susceptibility and Curic's law. An introduction to the Waiss theory of | |
| 7 the magnetic susceptionity and curie's law. An introduction to the weiss theory of 5 | |
| Total 30 | |

| Course Outcomes (students will be able to) | | | | | | | | |
| CO1 | Assign Miller indices to various crystallographic planes and directions in a crystal | V2 | | | | | | |
| COI | lattice, thereby understand periodicity in the crystal lattice. | K5 | | | | | | |
| CO2 | Analyze a given x-ray diffraction pattern to deduce the crystal structure of the | K3 | | | | | | |
| 02 | material and calculate the values of the basic structural parameters. | КJ | | | | | | |
| CO3 | Classify solids, and in turn semiconductors, based on electron occupancy and | K3 | | | | | | |
| 005 | calculate basic quantities related to charge transport in them. | K5 | | | | | | |
| CO4 | Use basic vector calculus to describe the laws of electrostatics and magnetostatics. | K3 | | | | | | |
| CO5 | Apply the laws of electrostatics to dielectric materials. | K3 | | | | | | |
| COG | Understand the microscopic origins of magnetism in materials through semi- | V A | | | | | | |
| 00 | classical theories. | K4 | | | | | | |
| K1 – R | K1 – Remembering, K2 – Understanding, K3 – Applying, K4 – Analyzing, K5 – Evaluating, K6 – Creating | | | | | | | |

| | Description of rel | evance of this course in the B. Chem. Engg. Program | | | | | | | |
| This is | a basic Mathematics course | e. This knowledge will be required in almost all subjects | later | on. | This | | | | |
| knowle | edge is also required for sol | ving various mathematical equations that need to be solv | ved in | ı sev | veral | | | | |
| chemic | cal engineering courses su | ch as MEBC, momentum transfer, reaction engineerin | ig, se | para | ation | | | | |
| proces | ses, thermodynamics, etc. | | | | | | | | |
| | Course C | ontents (Topics and subtopics) | I | Iou | rs | | | | |
| | Probability Theory and S | Sampling Distribution: Review of probability, Random | | | | | | | |
| | variables and cumulative | distribution function; probability mass function and | | | | | | | |
| | probability density function | on; Some common univariate distributions: Binomial, | | | | | | | |
| 1 | Poisson, Geometric and | Uniform, exponential, Normal, Gamma, beta etc; | | 15 | | | | | |
| 1 | Expectation and Moments (| central and raw moments); Generating functions: moment | | 15 | | | | | |
| | generating function and cha | aracteristic function; Multiple random variables and Joint | | | | | | | |
| | distribution; marginal dis | tributions, independence; Covariance and Correlation; | | | | | | | |
| | method of least squares and | l simple linear regression; nonlinear regression | | | | | | | |
| | Partial Differential Equat | ions: Introduction to Partial Differential Equations (PDE), | | | | | | | |
| 2 | Classification of higher or | der PDEs, Solution of PDEs using separation of variable | | 10 | | | | | |
| | techniques | | | | | | | | |
| | Numerical Solution of Sys | stem of Linear Equations: Solutions of system of linear | | | | | | | |
| 3 | equations (Gauss-eliminati | on, LU-decomposition etc.), Numerical solution set of | | 5 | | | | | |
| | linear algebraic equations: | Jacobi, Gauss Siedel, and under/over relaxation method | | | | | | | |
| 4 | Numerical Roots: Num | erical methods for solving non-linear algebraic / | | 6 | | | | | |
| - | transcendental etc.: Newton | n's method, Secant and Regula Falsi | | 0 | | | | | |
| | Interpolations: Interpolati | on and extrapolation for equal and non-equal spaced data | | | | | | | |
| 5 | (Newtons Forward, Newt | tons backward and Lagrange), Numerical integration | | 6 | | | | | |
| | (trapezoidal rule, Simpson' | s Rule) | | | | | | | |
| | Numerical Solution IVP: | Numerical methods for solution of first and higher order | | | | | | | |
| 6 | ODEs (initial values and b | oundary value problems) using single step methods (RK, | | 8 | | | | | |
| | Euler's explicit and impli- | cit methods), multi-step methods (predictor - corrector | | 0 | | | | | |
| | methods etc.) | | | | | | | | |

| | Numerical Solutions of BVP and PDE: Finite difference methods: Forward | | | | | | |
|-------------------------------------------------------------------|------------------------------------------------------------------------------------------------|---------------|--|--|--|--|--|
| 7 | difference, Backward difference, and Central differences application of finite | 10 | | | | | |
| / | difference methods to Boundary value problem in ODE and PDE (parabolic, elliptic | 10 | | | | | |
| | and hyperbolic) | | | | | | |
| | Total | 60 | | | | | |

| | | |] | Hour | `S |
| | Introduction to Indian | Knowledge System (IKS): | | | |
| 1 | – Introduction, Def | finition and History | | 2 | |
| | - Need to study it i | n current times | | | |
| | Chemists and tex | ts of the ancient era | | | |
| | Traditional Indian Pha | rmaceutical Sciences and Technology: | | | |
| | - Alternative syste | ems of Medicine/ Welfare of the society: Principles of | | | |
| | Ayurveda Madiainal alanta | and and during | | | |
| | - Medicinal plants | and crude drugs | | | |
| 2 | - Reappraisal of A | yurvedic Phytochemistry | | 6 | |
| | - Ayurveaic Dosag | to in Assume dia Sustam and assume risen to that of modern | | | |
| | - Extraction of her | | | | |
| | Detoxification of | s Proisonous plants (Shodhan Prakriva) | | | |
| | - Ancient perspect | ive of Adulterants and Substitutes | | | |
| | Traditional Indian Kno | wledge on Oils. Perfumery and Flavoring agents | | | |
| 3 | Essential oils and | l fixed oils | | 3 | |
| | - Applications in p | erfumery and flavoring-fragrance industry | | | |
| | Traditional Indian Kno | wledge on Textile and Fibres | | | |
| 4 | Types of fibers | | | 2 | |
| - | Textile patterns a | cross the country | | 2 | |
| | - Methods and Tec | chniques | | | |
| | Traditional Indian Kn | owledge on Dyes, Pigments, mordents and specialty | | | |
| 5 | chemicals | | | 2 | |
| | - Natural dyes and | pigments | | | |
| | - Sources, Method | s of dying | | | |
| 6 | Wayes Gume Carboby | wieuge on Polymers and surface coatings | | 2 | |
| 7 | Traditional Indian Foo | d Technology | | 2 | |
| v Q | Traditional Indian Know | wedge about Metallurgy and Materials Science | | 2 | |
| 0 | Traditional Indian Dece | ervetion Technology | | 2 | |
| 9 | I raditional Indian Pres | ervation Technology | | 3 | |

| | Methods of preservation: Food, monuments and artifacts Materials used in Preservation | | | | | | | |
|-----|--------------------------------------------------------------------------------------------------------------------|------------------|--|--|--|--|--|--|
| 10 | Science associated with traditional Indian practices during festivals | 2 | | | | | | |
| 11 | Connecting The traditional Indian Knowledge with Modern Science | 3 | | | | | | |
| | Total | 60 | | | | | | |
| | List of Textbooks/ Reference Books | | | | | | | |

| | Description of | relevance of this course in the B. Chem. Engg. Program | 1 | | | | | | |
| The pr | inciples learnt in this cou | urse are required in almost all the courses and throughout | the p | profess | ional | | | | |
| career | of Chemical Engineer. M | ost of the chemical processes involve handling of multicon | npone | ent mix | tures | | | | |
| which | may be homogenous or he | eterogenous phases. Separation is essential for material reco | overy | and re | cycle | | | | |
| as well | as meeting the product sp | becifications based on market requirements. Separation met | hods | are sel | ected | | | | |
| based of | on the material properties | , process scalability and economics. This course introduces | most | comm | ionly | | | | |
| used se | eparation methods in indu | strial operations. | | | | | | | |
| 1 | Course | Contents (Topics and subtopics) | Hours | | 5 | | | | |
| 1 | Introduction to Unit | Operations and Chemical Engineering Processes, | | 4 | | | | | |
| 2 | Distillation of himsen | unster: Concepts of Convective and diffusive transport | | 10 | | | | | |
| 2 | Distillation of binary | mixtures: Differential distillation, Flash or equilibrium | | 12 | | | | | |
| | distillation, Fractionatin | ig column and multistage column, reflux, reflux ratio, need | | | | | | | |
| | for reflux, McCabe-Ir | nele, Lewis-Sorel methods of estimation of number of | | | | | | | |
| | Trav. and column offic | is and leed lines, minimum and optimum reliux ratio, | | | | | | | |
| | HETD HTU Donohor | Severit method. Introduction to botch distillation and | | | | | | | |
| | steam distillation Meth | ods for multicomponent separations: Eanska Underwood | | | | | | | |
| | Gilliland Method | ous for multicomponent separations. Penske-Onderwood- | | | | | | | |
| 3 | Absorption and Stript | ning of dilute mixtures: Fundamentals of absorption | | 12 | | | | | |
| 5 | equilibrium curves (| Departing lines from material balances. Number of | | 12 | | | | | |
| | equilibrium stages. Kre | mser Equation. Stage efficiency and column performance. | | | | | | | |
| | Absorption columns. H | Rate based methods for packed columns (HTU, NTU). | | | | | | | |
| | Design considerations: | loading and flooding zones, pressure drop and column | | | | | | | |
| | diameter | | | | | | | | |
| 4 | Liquid Filtration: Filtra | tion theory: constant pressure, constant rate, and variable | | 10 | | | | | |
| | pressure-variable rate f | iltration, Incompressible and compressible cake filtration, | | | | | | | |
| | Continuous filtration, | filter aids, Filtration equipment, Selection, Sizing and | | | | | | | |
| | Scale-up | | | | | | | | |
| 5 | Sedimentation, Classifi | cation and Centrifugal Separations: Design and scale up | | 8 | | | | | |
| | equations, Performance | ce evaluation, Sedimentation equipment, classifiers, | | | | | | | |
| | centrifugal equipment, | Sieving operations, types of sieving (dry, wet, vibro), | | | | | | | |
| | magnetic separators, an | d froth flotation, Selection, sizing and scale-up | | | | | | | |

| 6 | Drying of solids: Mechanism of drying, drying rate curves, Estimation of drying time, Drying Equipment, operation, Process design of dryers, material and energy balances in direct dryers, Drying of bioproducts | 10 | | | | | |
|---------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|--|--|--|--|--|
| 7 | Particle Size Reduction: Energy requirements for size reduction and scale-up considerations, Operational considerations, Crushing and grinding equipment: impact and roller mills, fluid energy mills, wet/dry media mills, Selection of equipment | 4 | | | | | |
| | List of Textbooks/ Reference books | | | | | | |

| | Course Outcomes (students will be able to) | K Level | | | | | |
| CO1 | Know the significance and usage of different particulate characterization parameters, and equipment to estimate them | K2 | | | | | |
| CO2 | Describe Size reduction energy requirements, estimate performance of equipment, selection and sizing of equipment | K2 | | | | | |
| CO3 | Analyze filtration data and select systems based on requirements, estimate filtration area for given requirements, understand filter aids and their usage | K4 | | | | | |
| CO4 | Draw T-y-x diagrams, and y-x diagrams, operating lines, feed line, bubble point, dew point calculations, ternary phase diagrams, partition coefficient | K3 | | | | | |
| CO5 | Describe two common modes of drying, industrial drying equipment | K2 | | | | | |
| CO6 | Calculate mass transfer coefficient in various equipment, Calculate height and diameter required, minimum solvent required in absorption, calculate height and diameter required, minimum reflux required in distillation | K3 | | | | | |
| K1 – Re | emembering, K2 – Understanding, K3 – Applying, K4 – Analyzing, K5 – Evaluating, K6 | - Creating | | | | | |

| | Course Outcomes (students will be able to) | K |
| | Course Outcomes (students will be able to) | Level |
| | List situations where liquid-liquid extraction might be preferred to distillation, Make a | K2 |
| CO1 | preliminary selection of a solvent using group-interaction rules, Size simple extraction | |
| | equipment | |
| | Differentiate between chemisorption and physical adsorption, List steps involved in | K2 |
| CO2 | adsorption of a solute, and which steps may control the rate of adsorption, Explain the | |
| | concept of breakthrough in fixed-bed adsorption | |
| | Explain how crystals grow, Explain the importance of supersaturation in crystallization. | K3 |
| CO3 | Describe effects of mixing on supersaturation, mass transfer, growth, and scale-up of | |
| | crystallization | |
| | Explain membrane processes in terms of the membrane, feed, sweep, retentate, permeate, | K3 |
| CO4 | and solute-membrane interactions. Distinguish among microfiltration, ultrafiltration, | |
| 04 | nanofiltration, virus filtration, sterile filtration, filter-aid filtration, and reverse osmosis in | |
| | terms of average pore size. Explain common idealized flow patterns in membrane modules. | |
| COS | Understand and compare various separation processes used in the chemical and allied | K3 |
| 005 | industries | |
| C06 | Select and carry out preliminary sizing of various industrial extraction, crystallization, | K3 |
| 000 | filtration and drying equipment | |

| | Description of | relevance of this course in the B. Chem. Engg. Program | n | | | | | | |
| This is | s a basic course that deals | with heat transfer, heat exchangers and their design. Heat t | ransfe | r fori | ns one | | | | |
| of the | basic pillars of Chemical | Engineering Education and is required in all future activiti | es. | | | | | | |
| | Course | Contents (Topics and subtopics) | | Hou | rs | | | | |
| 1 | Shell and tube heat | exchangers: Basic construction and features, TEMA | | 8 | | | | | |
| | exchanger types, their | nomenclature, choice of exchanger type, correction to | | | | | | | |
| | mean temperature diffe | rence due to cross flow, multipass exchangers. Design | | | | | | | |
| | methods for shell and tu | be heat exchangers such as Kern Method, Bell – Delaware | | | | | | | |
| | method | · 1 1 01 1 1.1 · | | 2 | | | | | |
| 2 | Finned tube exchanger | s, air-cooled cross flow exchangers and their process | | 3 | | | | | |
| 2 | design aspects | Plate Plate fin Spinel ato, Construction features | | 2 | | | | | |
| 3 | Compact Exchangers: | Plate, Plate IIII, Spiral, etc.: Construction, leatures, | | 3 | | | | | |
| 4 | Condensation of veno | and then process design aspects | | 0 | | | | | |
| 4 | practical aspects bor | izontal versus vertical condensation outside tubes | | 0 | | | | | |
| | condensation inside tub | as Process Design aspects of total condensers, condensers | | | | | | | |
| | with de-superheating a | nd subcooling condensers of multicomponent mixture | | | | | | | |
| | condensation of vapour | s in presence of non-condensables | | | | | | | |
| 5 | Heat transfer to boiling | liquids: Process design aspects of evaporators, natural and | | 8 | | | | | |
| | forced circulation reboi | lers | | | | | | | |
| | | List of Textbooks/ Reference books | | | | | | | |
| 1 | Kern D.Q Process He | at Transfer, Wiley, 2019, 2 nd Edition | | | | | | | |
| 2 | Kakac S., Bergles A.E., | Mayinger F - Heat Exchangers, Springer, 2012, | | | | | | | |

| Design | Project I and II | | | | | | | | |
| | Description of | relevance of this course in the B. Chem. Engg. Program | n | | | | | | |
| This co | ourse integrates all the o | chemical engineering and allied subjects for appropriate | desigr | n of pi | ocess | | | | |
| plants, | in selection of processes | and evaluating alternatives | | | | | | | |
| | Course | Contents (Topics and subtopics) | | Hour | S | | | | |
| 1 | Development of a preli | minary Process System: Modular approach | 2 | | | | | | |
| 2 | Multiple process synthe | | 2 | | | | | | |
| 3 | Sequencing of operation | ns and integration in processes | | 2 | | | | | |
| 4 | Batch vs continuous vs | semi-batch processes- Scale up | | 3 | | | | | |
| 5 | Process Engineering as | spects of low and medium volume chemicals including | | 3 | | | | | |
| | process development. | | | | | | | | |
| 6 | 6 Concept of dedicated and multiproduct plant facilities, pilot plant, mini plants | | | | | | | | |
| 7 | Development and evaluation of alternative flow sheets 3 | | | | | | | | |
| 8 | Scale up aspects; identification of controlling steps of process, 3 | | | | | | | | |
| 9 | Green Engineering principles 6 | | | | | | | | |
| 10 | Utilisation of energy; cost of utilities, heat exchange networks 3 | | | | | | | | |
| 11 | Process intensification | | | 3 | | | | | |
| 12 | Preparation of Concept | 3 | | | | | | | |
| 13 | Preparation of process s | specifications for typical equipment. | | 3 | | | | | |
| 14 | Safety and Risk of cher | nical processes | | 3 | | | | | |
| 15 | Learn from mistakes | | | 3 | | | | | |
| | | List of Textbooks/ Reference books | | | | | | | |

Course Outcomes (students will be able to....)

K Level

| CO1 | To select a strategy for a process from amongst the alternatives | K2 | | | |
|-----------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|----|--|--|--|
| CO2 | Determine strategy for carrying out a particular process | K3 | | | |
| CO3 | Prepare specifications for a particular equipment | K2 | | | |
| CO4 | Calculate utility requirements | K3 | | | |
| CO5 | Identify possible process intensification routes for a given chemical process | K3 | | | |
| CO6 | Should be able to draw basic flowsheet of a chemical process | K4 | | | |
| K1 – Remembering, K2 – Understanding, K3 – Applying, K4 – Analyzing, K5 – Evaluating, K6 – Creating | | | | | |

| Description of relevance of this course in the B. Chem. Engg. Program | | | | | | | | | | |
| This subject will help students to understand different codes and standards used in industrie | s pertaini | ng to | | | | | | | | |
| chemical process equipment along with selection of suitable materials and fabrication proc | ess for va | rious | | | | | | | | |
| parts of different chemical process equipment's. This will help Chemical engineer to understa | nd mecha | nical | | | | | | | | |
| design of various chemical process equipment's and their drawing as per industry requirement | ts. | | | | | | | | | |
| Course Contents (Topics and subtopics) Re | quired H | ours | | | | | | | | |
| Design of pressure vessels: stresses acting on pressure vessels, operating | | | | | | | | | | |
| conditions, selection of materials, pressure vessel codes, design stress and | 12 | | | | | | | | | |
| design criteria's, Design of Shell, Head, Nozzle, Flanged joints for heads and | 12 | | | | | | | | | |
| nozzles. | | | | | | | | | | |
| Design of Storage vessels: Storage of various types of fluids and liquids in | | | | | | | | | | |
| tanks, Loss mechanism of storage of volatile and non-volatile liquids and | | | | | | | | | | |
| 2 gases, Types of storage vessels, Vessels for storing of gases, method of storage | 12 | | | | | | | | | |
| of gases, Design of rectangular and cylindrical tank with components such as | | | | | | | | | | |
| shell, bottom plate, self-supporting roof design, types of roofs, | | | | | | | | | | |
| Mechanical Design of Reaction Vessels. | | | | | | | | | | |
| a) Design of shells/heads subjected to internal and external pressures. | | | | | | | | | | |
| 3 b) Types of Jackets /Coils used for heating and cooling in reaction | 12 | | | | | | | | | |
| vessels and their design. | 12 | | | | | | | | | |
| c) Design of agitator shaft for various impellers | | | | | | | | | | |
| d) Design of leg and bracket supports | | | | | | | | | | |
| Mechanical Design of Heat Exchangers | | | | | | | | | | |
| a) Components of shell and tube type heat exchangers. | | | | | | | | | | |
| 4 b) Design of various components of heat exchangers such as Fixed tube | 12 | | | | | | | | | |
| c) Various design codes | | | | | | | | | | |
| d) Design of saddle supports. | | | | | | | | | | |
| Mechanical design of distillation columns | | | | | | | | | | |
| a) Various components of columns such as trays, packings, downcomers, | | | | | | | | | | |
| 5 bubble cap etc | 12 | | | | | | | | | |
| b) Design of shell for various stress conditions. Design of skirt supports. | | | | | | | | | | |
| Total 60 | | | | | | | | | | |

CEP1189: Internship / On Job Training

CEP 1710 Internship

- In the Eighth semester, every student will have to undergo an internship and/or On Job Training. The Internship would be of 12 credits.
- The internship would be assigned to the student by the Departmental Internship Coordinator, with the approval of Head, Chemical Engineering Department.
- The total duration of the internship would be for a period equivalent to 12 Calendar weeks. The internship may be completed in one or more organizations as described below.
- The internship could be of the following forms: Industrial internship in a company (within India or Abroad) involved in R&D / design / manufacturing (QA/QC/Plant Engineering/Stores and Purchase) / marketing / finance / consultancy / Technical services / Engineering / Projects, etc.
- At the end of the internship, each student will submit a written report based on the work carried out during the Internship. The report will be countersigned by the Supervisor from Industry / Institute as the case may be.
- Performance of the student will be assessed based on the written report and a presentation to a committee consisting of two faculty members from the Chemical Engineering Department.
- Students will be assigned a grade based on the written report and a presentation; evaluated by a committee of faculty members.
- Feedback will be taken from Industry mentors and this will used while assigning the grades.

| | Membrane Processes : Principles of various membrane processes like Reverse Osmosis, pervaporation, gas separation and electro dialysis. Design equations and module design. Concentration polarization. Adsorption and Ion Exchange Processes : Adsorption and ion exchange equilibria. Various isotherms. Contact filtration, design of fixed bed adsorber including breakthrough cuurve. Chromatographic Separations : Principles of chromatographic separation, criteria for effective separation, supports and methodology and process design. Separation of Racemic Mixtures : Principles of racemic modification and their application in separation of racemic mixtures with specific examples. Dissocaition Extraction, Reactive Extraction List of Textbooks / Reference Books | | | | |

| | Course Contents (Topics and subtopics) | | | | | | | | | |
| Course Contents (Topics and subtopics) Definitions: Chemical and physical properties of interfaces, Introduction to surface mechanisms and thermodynamics, capillarity, meniscus shapes, contact angle, surface tension and its measurement, Laplace Equation, Young's equation, Kelvin Equation, Gibbs equation, equilibrium criteria, dividing surface, monolayers and films, mobile and fixed interfaces Interfacial areas and degrees of wetting, aerosols, liquid liquid and particulate dispersions, Bubbles, and drops aphrons. Microphases: Definitions and dynamics, Micelle formation surfactants CMC, structures of micelles, swollen micelle and microemulsions models, phase diagrams, Macroemulsions, Mechanical vs thermodynamic stability, HLB, Bancroft rule and other systems, Foams Colloids, Film elasticity, drainage, association, Langmuir Blodgets film production. Experimental techniques of measurement of relevant properties: surface tension, solubilization, thermodynamic properties, spectroscopic techniques Rheological aspects of two phase (involving microphases) flow and transport, visco elasticity of stractant solutions. Solubilization and catalysis by microphases: Models, theories and data, surface potential and equations of state, double layer theory, layer Debyc⊟Huckel theory, Thermodynamics of solubilization, foam breakage, theories of coalescence, and agglomeration, Brownian motion, shear and other models. Applications: Adsorption, foam fractionation, forth floatation Enhanced oil recovery, Novel separation processes, Coagulation, Flocculation, Microelectronics, surface vapour deposition, other applications with techniques Monte Carlo simulation for molecular dynamics of structures, graphics software for structural display., Diffusion on the surface | | | | | | | | | | |
